CANADA

MORE POPULAR THAN EVER
after forty years' trial.
WHY?

JOHN LYSAGHT, Limited, Makers, BRISTOL, ENG.
A. C. LESLIE & CO., MONTREAL Managers Canadian Branch.

You Admit
that you need a stock of
Lawn Mowers

The only question is, "whose make?"

Our machines have been before the people for years. They are fully endorsed.

The quality is right, the prices are right, the shipments are right; and trade will be right if you sell TAYLOR-FORBES Mowers.

RICE LEWIS & SON

LIMITED

TORONTO.

This is a specimen of one of our advertisements which regularly appear in all leading publications. All results therefrom are referred to the dealer in the town from whence they come. SEND FOR BOOKLET WITH TRADE PRICES.

PRICES:
Hollow Ground
$2.00
Double Concave for Extra Heavy Beards
$2.50
Pair in Leather Case
$4.50
Carbo-Magnetic Strop $1.00

NO HONING **NO GRINDING**

NO NEW BLADES **NO ANNUAL TAX**

FIRST PURCHASE PRICE THE ONLY EXPENSE

If you will send us your dealer's name and let us know whether he handles the Carbo-Magnetic razor, we will send you our **booklet, "Hints on Shaving," Free,** and also make you a proposition whereby we will arrange with your dealer that you can test and use one of these razors **without any risk** or obligation on your part. The booklet illustrates the correct razor position for every part of the face, and gives much needed information to all self-shavers. The Carbo-Magnetic razor is for sale by most good dealers who guarantee it—we back their guarantee. Send for book to-day.

THOS. BIRKETT & SON CO.,
LIMITED

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

TORONTO

INCREASE YOUR CUTLERY SALES

AND YOU WILL

INCREASE YOUR PROFITS

We wonder sometimes why some dealers bother with the cutlery business at all, as they pay so little attention to selecting the lines they want to sell.

If your sales of Cutlery are small, it is likely because you haven't the kind or the quality your customers ask for. Without the latter, you will not get the kind of trade that would increase with time. People who know your QUALITY is right are the ones that will pay a GOOD PRICE for GOOD GOODS

The following well-known makers made their reputations on quality only, and they are names in the cutlery business to conjure with.

Joseph Rodgers & Sons,
George Wostenholm & Son,
George Butler & Co.,
E. M. Dickenson,
Henry Boker & Co.,
Harrison Bros. and Howson,
Maleham and Yeomans,
Jonathan Crookes, etc.

We carry good stocks of these well-known lines, and if your "Cutlery Man" is not what he should be—try us.

Our salesmen can reach you in a very short time, with a full range of samples.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

Why You Should Sell THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.
Dept. J, Hamilton, Ont.

There is Lots of Second-Rate

WIRE FENCING

Lots of it. Once it is tried the fact is self-evident. But you do not want to get second-rate stuff on your hands, do you? Therefore, it is a good plan to secure samples of fencing and make tests of your own before you buy in large quantities.

DILLON HINGE-STAY FENCE

will live up to everything we claim for it. And in the matter of price you will find there are differences—in favor of the "Dillon." It will make more money for you by giving you the biggest margin, and your patrons the most satisfaction.

Did you get a copy of our booklet? If not, ask us for one.

HOW TO SUCCEED IN BUSINESS

By F. C. Lariviere, Montreal.

I am free to admit, at the outset, that there exists a great diversity of opinion as to the means best suited to attain business success. However, I may be permitted to bring to your knowledge the results of my investigations of the subject, as well as the lessons which my twenty-five years of experience have taught me.

In the first place, I shall inquire of the young men: Do you appreciate to its true value, time, which vanishes so quickly? You are apt to consider life as a succession of happy dreams, but life is pregnant with opportunities for your progress and success in the various fields of labor and business opened before you. It is in the early years of life that character is molded, and that the foundation for future achievements is laid. While we should have implicit faith in the Divine Providence, it will be well for us to remember that we are expected, for the greater part, to work out our own career.

On the threshold of life have you ever realized what is in your power, and what it is your duty, to do, with a view to paving the way for future success? To my mind, your object should be to become some day merchants owning up-to-date stores, widely patronized, and more particularly to lay by substantial savings which may enable you to enjoy life in your old age, and not be dependent on others, as we now find so many to be in the various branches of business. Such should be your aim, if you wish to attain your object, that is, as I presume, to rise above the general level of mediocrity.

The young man who makes choice of a profession should henceforth concentrate his energy, his thoughts and his activity towards making the best of the opportunities it may offer. The life of the improvident man is oftentimes a burden to himself and a sorry sight for his acquaintances. Such a life gives the impression of a craft tossed to and fro on the high seas and liable at any time to sink and become stranded.

Rest assured that too much attention cannot be given to this question, nor too much time taken up to ensure its proper settlement. Set before your eyes a lofty ideal, as the battle will be a hard one to fight and victory will not always be an easy prey. But once you have firmly made up your mind to succeed, hope will not forsake you, whatever else may happen, and it will brighten up your darkest thoughts.

Let me now appeal to the experience of those who are more advanced in life, and ask whether they are not in a position to substantiate what I have just stated, for a great number of them have been witnesses of the failures of men who apparently were qualified to succeed, had it not been for their lack of steadiness.

To succeed in business it will be necessary that your mind be constantly engrossed with it, and that your cravings be followed by years of unrelenting labor. Great ideas may suddenly crop up in your brain and open up wide vistas, but experience teaches that no durable success is attained where tenacity and self-control are lacking.

Then, again, as we are following the same highway, let us profit by one another's experience. Let us rise above that miserable spirit of jealousy and suspicion towards our brethren. Instead of criticizing, running down and slandering even our competitors, let us say to ourselves that we are in a position to imitate them, that competition is open to all. True, there will be only one at the head of the list, but it remains, nevertheless, for us to labor steadily and to do our very best to get there, so that if we fail in our efforts it will be no fault of ours.

A casual observation of what is going on, especially in large cities, will suffice to convince us that the main cause of most failures is to be found in the peculiarities of those who fail rather than in the conditions against which they had to contend. Study the methods of those who succeed, and you will find that they are taking to their work with no faint heart, that they are not carried away by the pleasures of society, outdoor sports, and the theatre or similar amusements.

F. C. Lariviere,
President of Amiot, Le ours & Lariviere, Incorporated, Montreal.

I do not mean that one should refrain from all such pastimes, but that they should occupy only a secondary place in our minds and occupations, for no one can hope to get along in the world without concentrating all his energies towards the attainment of the object he has in view. In this respect the same rules apply as regards business and as regards the trades.

To my mind, the shiftless merchant resembles those mechanisms which cannot be operated except by some outside motor, and never, to my knowledge, have such men prospered. They plod along for a lifetime, satisfied with what they have and with what they do, until by degrees they become utterly helpless and hopelessly involved.

Before starting out into any business one should make himself acquainted with all its details, with the various uses of all the goods offered for sale as well as with their value. Do not be afraid to accumulate too much information, but work on earnestly and steadily, picking up all available data as you go along and finding out where the various wares can be procured to the best advantage.

Punctuality and Perseverance.

In my opinion, to feel that one has done his whole duty should be sufficient inducement to act as aforesaid. The sense of duty brings along with it steady habits and punctuality. Never fail to keep an engagement, for punctuality is the mainstay of business success.

Now, what shall I say of perseverance? Many persons of ordinary ability, and without any other assistance than their knowledge of business conditions in their particular trade, owe to their perseverance, their punctuality and their economy, achievements far exceeding their hopes. It follows that we should never feel discouraged, but resolutely face all difficulties and use them as stepping stones towards the desired goal, for what seems unattainable to-day may be easy of accomplishment to-morrow.

Cultivate uprightness and honesty, which are indispensable to success. Always keep your word; never make a statement without being positive that it is true, and should you find out afterwards that you were mistaken do not hesitate to acknowledge your error. By doing so, you will retain the confidence not only of your customers but that of your purveyors as well.

All I have said may be summed up in one word, "Character." Economy is another indispensable quality, for, as you are all aware, extravagance is one of the most frequent causes of failure. I refer to that kind of extravagance developed by meetings and junketings with friends, which keep one away from his work and desk. This truth is so generally admitted that it seems useless to insist upon it. I challenge contradiction when I say that business is no pastime, but a means of acquiring a fortune, or at least a competency, and that a merchant's aim should be to reap great profits from his trade, not only for the benefit of himself and family, but for the benefit of his employes as well.

It is good policy for the leader in business to deal generously with his employes. A clerk who is well satisfied with his earnings will work with greater energy and strive to further improve his condition by ensuring better returns for the firm. On the contrary, an inferior, underpaid hand will discourage your customers and cause them to vanish, or else will give your goods away without charging for them, or in some other way bring about serious losses, and the retention of such inferior clerks is sufficient cause at times to bring about failure.

The gross returns or profits ensured by a sale should be only secondary consideration. The good name of a firm is oftener of much greater import to it than the capital it may dispose of.

Bookkeeping Key to Success

A branch of work to which, as a rule, merchants do not give enough attention is bookkeeping. If you only realized the variety of information and data which may be obtained from a proper system of accounting, even as regards a small retailer, you would not think of practising that false economy of which so many are guilty. What could be more useful than to realize the amount of one's sales or purchases, of one's stock, assets and liabilities. At any rate, you will acknowledge that if you only had once a month all these data you would be better posted as to the real condition of affairs, and in a better position to rush matters to a satisfactory culmination, for bookkeeping is the key to success.

You may object that your profits are not large enough to warrant such an expenditure; that your business is not such as to necessitate the services of a bookkeeper, and that you are not yourself in a position to do the work for want of training. To the former objection I say: You will be satisfied of the necessity of a perfect accounting once you have tried it. You will then find out that the wholesale merchant, although unwittingly, charges to your account a bill which he should have charged to your neighbor, or debits you for goods which you have never received, or else makes you pay for the goods so much per dozen instead of so much per gross. At times it will be found that serious errors have been made in the adding up of the columns of figures. And I assure you that all this may happen without there being any intention to defraud on the part of the wholesale merchant. But it is for you to go over your accounts and to pay only what you owe. It would be a matter of surprise to me, indeed, if from this source alone you did not save enough to pay the salary of your accountant.

As regards the goods which you sell, are you quite sure that they are all charged to those who have bought them, whether the billing of these was rightly done, whether the amounts have been correctly charged to your customer's account, and, lastly, whether these amounts are all regularly collected? Believe me, the amounts you lose through laxity in the collection of small bills would suffice to pay the salary of not only one clerk, but I shall venture to say of two, and to convince yourself of this truth, figure out the amounts which were due to you by people who were solvent at the time the goods were delivered and who have since failed or skipped away, and you will realize how improvident you are in not keeping books regularly. Besides, the importance of the matter is evidenced by the fact that the Government has deemed it advisable to force merchants, under penalty of imprisonment, to keep a set of books, and more particularly a cash book, in order that moneys received and paid out may be readily ascertained.

Evils of Credit System.

Let me now refer to discrimination in granting credit. I shall first call your attention to the practice of some people who make it a point to buy at the start rather large quantities of goods, for which they pay cash, but who will shortly be asking you to open an account in their name. They have large contracts in hand, the persons for whom they are building are somewhat remiss in their payments, while they are not wealthy, they are perfectly honest. Now, if you sell to some of these people for a single dollar on credit, you may be sure you will never see them again. Their whereabouts will be unknown to you. Another class of people to be feared, although they lack the wily ways of the former, are those good men who deal with you with the firm resolve of paying for everything they buy, but who work indiscriminately for any one, and never know when and how they will get their pay. You are no doubt acquainted with that class of honest employers who hire workingmen and get out of them all the work they can, but never think of paying them, and as a result of whose action the merchant is unable to collect his due.

How can that be avoided? some may inquire. To my mind it is an easy matter. Win the confidence of your customer, let him see that you take an interest in his welfare, and lay down as a condition for the opening of a credit in his name that he will undertake to work solely for people whose financial standing is good. Have him consult you in these matters, and should you be in the dark as to the solvency of the persons concerned, it will pay you to take pains and to spend money in finding out the true state of affairs. One is quite warranted in going to some expense in order to avoid loss through bad debts. If we were all of us willing to take such a course we would in a very short time have got rid of all these schemers who prey on the workingman, and very often live at the expense of the merchant.

Tricks to Defraud Merchants.

I shall now call your attention to a trick much resorted to in order to defraud merchants—the telephone trick. Here is the way they work it. Mr. Venne, let us say, is called to the telephone: "Mr. Venne, it is Chatillon who is speaking. I have some work to do to-night, I have just broken a pair of pincers, and I am sending a man to get a new pair from you." You deliver the goods and send the bill to Mr. Chatillon, a few weeks later, and are surprised to learn from Mr. Chatillon that he never ordered nor received the goods, and so you lose the price of the tools.

Another means of safeguarding your interests is the substitution system. You get an order by 'phone in the name of some person well known in your part of the city: "I have a painter coming here to-morrow morning to start a job. Please send me 50 lbs. of white lead, 5 gallons of oil, 1 gallon of turpentine, and a brush. Send it to such an address, where I am having some houses repaired." Being unsuspicious, you do not take the trouble of telephoning to Mr. So and So in order to ascertain that he actually wants the goods; you forward them to the address given. After the goods have been delivered you learn that they were never ordered by the person whose name was given, and that he does not own any property at the address mentioned. On further investigation you may find that the lot is occupied by a gang of workmen who are entirely unaware of any such order having been given, or is the site of some unoccupied building, and once more you will have to give up all hope of recovering the price of the goods supplied.

Then, again, the amount of credit in each particular case should be limited, not only in accordance with the customer's means, but also in accordance with his moral character. I have greater confidence in the poor workingman who is willing to pay his debts than in the wealthy contractor who pays only when forced to do so. In the same way, I would advocate leniency in the case of the unhappy victim of misfortunes.

A Good Seller.

A good seller cannot afford to be content with a condition of semi-activity. He should take means whereby practically there will be no dead season for his business. There are stores wherein activity reigns from one end of the year to the other. True, at certain seasons, there may be less bustle than at others. But still activity does not cease and interest does not flag even during those periods of relaxation, while next door no customers are to be seen. It would seem that in stores of this latter class sellers are rather disgusted with their calling and refrain systematically from carrying on their work.

If we will consider things in their true light we will soon find out that it is the selling faculty that has led most people to fortune. When that talent is coupled with honesty, it develops respect and consideration for those who are favored with it, and who are, indeed, the best friends of humanity, inasmuch as they are surely much more effective in ensuring the prosperity of the country than the host of schemers, grafters and the like who get rich through the ruin and misery of hundreds and thousands of poor families.

A successful business man must, as a rule, be a good seller. There are exceptions to this rule, but they are few. The good seller is always obliging; it is the means of retaining one's customers, who prefer waiting in order that they may be served by the clerk who, in his dealings, has always given them satisfaction. Therefore, I am right in saying that such a disposition is actually a source of revenue which should not be made light of.

It is generally recognized that the head of a firm, especially in a large

establishment, cannot attend to everything. He must be content with looking after things in a general way, and following the advice of the heads of departments as regards the management of their special branch.

The Treatment of Clerks.

The wise employer is respectful and dignified in his dealings with his staff. He is careful not to rebuke a clerk in the presence of customers or of his fellow clerks. Such a procedure will give excellent results. The young man dealt with in a considerate manner cannot feel otherwise than gratified, and at any rate it is inexpensive. As a result the clerk in question will have a kindlier feeling towards his employer, will take more interest in his work and do better in every way. The employer should not fear, and even should make it a point to train his clerk into the proper way of attending on a customer; he should acquaint him with the uses of the various goods, call his attention to the superior character of the goods, and in that way prepare the clerk to effect sales judiciously. To my mind it is bad policy to refrain from doing so for fear that the clerk, after getting such a training, will request an increase of salary.

Neither should the employer abstain from congratulating his clerk or giving him recognition for his good work lest he might thereafter count himself indispensable. No such man has ever existed, or shall ever exist, either in state or church or business matters. The competent successor may not be in sight just now, but circumstances will cause him to turn up. The man who thinks he cannot be replaced finds out his mistake when the new man comes in. No self-respecting employer will put up with such a clerk whatever position he may occupy. It is a matter of experience that the employe who thinks his services cannot be dispensed with becomes negligent, ceases to be painstaking, gets to be more exacting and dictatorial in a way that is apt to upset the proper working of the business.

Developing Talents of Employes.

A broadminded employer is careful that opportunity be given to his employes to carry out some of their ideas as to the running of the business, and to leave scope for their private initiative, while reserving his right to approve of their plans. In that way the employes will take a personal interest in the welfare of the firm and develop new and fruitful ideas. In this connection let me quote a sentence from Andrew Carnegie, the multi-millionaire: "I would," he said, "have engraved on my tomb the following words, which explain my success: 'Here lies a man who knew enough to employ men much abler than himself.'"

It takes a keen observer to find out the aptitudes and talents of his various employes, and to assign to each one of them the duties which he is likely to discharge to the best advantage. It is important to learn how to find out the true worth of men, and I must say that it is not a common talent. Men of keen intellect, as well as those of a dull disposition, should not undertake to grasp more than they can hold. The greater the business carried on the more attention will the finances require.

There should be a good division of labor, so that every department be left in the hands of competent men who see, think and act for the greater good of the firm.

Several questions still remain to be dealt with, comprised under the heading of general expenditure, such as salaries, rent, interest on capital, heating and lighting; and others, such as possible profits, good buying, and, lastly, that of capital, which is possibly the most important and the most difficult to deal with on account of the variety of conditions to be considered. But I shall postpone to some future occasion the consideration of these topics.

If I have succeeded in being interesting I hope this will be the means of knowing one another better, and through co-operation reaping greater profits from our work.

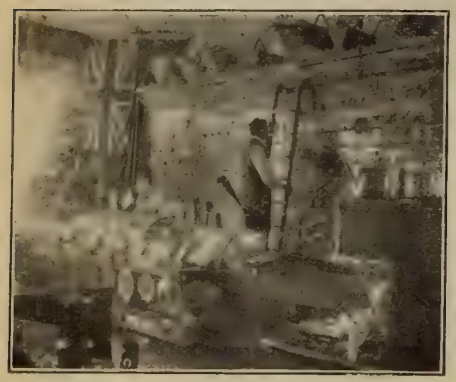
HAMILTON, ONT.



MARVELLOUS POWER OF JACKS.

Taking into consideration the size and weight of the Covert automobile jacks, their great power is truly marvellous. When these jacks were first manufactured they were given a crude test as to their power and stability, but in order to ascertain their actual strength the Covert Mfg. Co. recently decided to have them given a crucial test. The test was made by Prof. T. R. Lawson at the Rensselaer Polytechnic Institute, Troy, N.Y., and the result was far beyond all anticipations. The No. 1 jack, weighing only 6 lbs., and the No. 2 jack, weighing only 8 lbs., withstood each a pressure of over 20,000 lbs., and the No. 3 jack, weighing but 12 lbs., withstood a pressure of over 30,000 lbs., which was really a most wonderful result.

A FINE STORE.

Outside of the larger cities, there are few finer hardware stores in Quebec Province than that of A. H. Nelson Kennedy at Buckingham.

Mr. Kennedy has had long experience in the hardware business, having been manager for F. J. Wilson & Co., Buckingham, before branching out in business for himself. In May, 1903, Mr. Kennedy took the premises opposite the new post office building in the same

View showing shelving, counters and Christmas tree window display.

town, and he has succeeded in building up a large and high class trade.

His store is recognized as being one of the most up-to-date on the north shore, and as our illustrations show, it would be a credit to any place.

Mr. Kennedy always keeps a good stock of shelf and heavy hardware, and has a large turnover of lumbermen's and miners' supplies. A special line which he has found both pleasant and profitable, is wall paper. At this season of the year, Mr. Kennedy keeps a large and varied stock, which is admirably bestowed in racks above the shelving, as may be seen in the illustrations. He is an enterprising and progressive hardwareman, and thoroughly deserves his success.

View from front of Kennedy's store at Buckingham, Quebec.

HONEST TRUTH!

Here is a true sporting story that is stranger almost than fiction. A manufacturer named Fowler, hailing from the Maritime Provinces, sold an order of goods to a dealer named Quail. The goods were packed and shipped by one Drake, whilst the invoice was prepared by a man named Hunter.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Farm Fencing.

John W. Taylor, of 338 St. James street, Montreal, writes: In your issue March 24th you mention "Farm Fencing," and draw attention to the fact that it is becoming one of the profitable lines in a hardware stock. As an agent selling a good fence please let me say a word to hardware dealers, and that is, that the indifferent way in which they take hold of the fence business is fast driving the trade out of legitimate channels into the hands of machinery agents and sometimes farmers, and they will find when too late that they have made a grave mistake. The few who have studied the matter in a business way say there is as much margin in fence for money invested as in any line they handle.

* * *

Another Dealer Favors Association.

C. E. Noble, Dundalk, writes: I think a retail hardware association would be a good thing for the hardwaremen. We would be in a position to lay our grievances before the proper committee, who would have the power to act for the individual and the association regarding the excess express and freight charges we have to pay, the cutting of prices amongst the retailers and the wholesale houses selling to parties that are not in the business. Many a complaint could be brought before the association which could be dealt with in a fair and satisfactory manner. The main thing would be to get good officers that could and would do the right thing. We have today hardware in implement shops, harness shops, and grocery and dry goods stores. Of course this is a free country and a man can sell what he likes, but I object to parties getting a few staple lines and cutting the price, as it is unfair to the hardware store. Many lines that the hardwaremen used to make money out of are drifting from their business, such as churns, rope for hayforks, binder twine, machine oils; and in some places implement men sell stoves, because jobbers are anxious to peddle their goods. I think a good strong association could help to rectify things.

* * *

Rough Lumber Wanted.

The Barnes Hardware Company, Port Arthur, writes: Could you give us any information which would lead us to secure some rough lumber along the Georgian Bay ports. We are subscribers to your paper, and knowing its merits we feel confident its publishers can give us the information we require.

Note.—Cameron & Campbell, Toronto, makers of shelf boxes, etc., can supply certain grades of lumber in the district named. Other lumber firms with mills in the Georgian Bay district are the following: Keenan Bros., Owen Sound; Turner Lumber Co., Midland; Maitland, Rixon Co., Owen Sound; F. McGibbon & Sons, Penetanguishene; R. Laidlaw Lumber Co., Toronto; Jas. Playfair & Co., Midland; Ontario Lumber Co., Home Life Bldg., Toronto; Geo. G. Gladman, Parry Sound, and A. P. Elbert, Wiarton.

* * *

Loose Leaf Ledgers.

J. D. Smith, Baysville, Ontario, writes asking for information regarding the different loose leaf ledger systems and refers particularly to the Copeland-Chatterson system. We do not care to compare the different systems now in use for retail accounting, but in reply to the request about the Copeland-Chatterson goods, we can say that this firm originated the perpetual loose leaf idea for retail business, and their systems are very extensively used both here and in the British Isles. Their wide and successful experience guarantees the goods they sell as being effective in operation. Besides this, the firm is noted for the superior grade of material used in their different books. Should you write them, we have no doubt they will furnish you with advertising matter and particulars.—Editor.

* * *

Chance for Manufacturers.

The C. F. Smith Company, manufacturers of hardware specialties, Dekalb, Illinois, write stating that they desire to get in touch with some manufacturing concerns in Canada who would undertake to make their Franklin Woven Wire Stretcher in quantities ordered by the Smith Company to supply the demand for these goods in Canada.

THE TOBIN TENT AND AWNING COMPANY.

Quality does count in modern manufacturing, even more than it ever did, and this was well accentuated the other day on a visit to the factory of the Tobin Tent and Awning Company at Ottawa. The factory is equipped with the latest modern machinery and apparatus, even the sewing machines being operated by electric power. The plant has been enlarged recently to double its former capacity. From the beginning Mr. Tobin made his reputation on quality of the work and finish in tents and awnings of all descriptions. The manufacture of heraldry bunting and flags scientifically and historically correct is an extensive department, and the fact that they buy supplies from the same source as the Royal Navy gives an additional confidence in the firm's output.

Garden tools is a line that will soon be moving. Many men have a hobby of gardening. Get after them in your advertising.

STOVES AND TINWARE

TIN PLATE COMPANY'S PROGRESS

Stories that the Canada Tin Plate & Sheet Steel Company are ordering machinery for their new plant at Morrisburg, and that the plant will soon be in operation, have been investigated by Hardware and Metal, but all that appears to be under way as yet is a small order for shafting and pulleys being filled by the Polson Iron Works, Toronto. A large order for special machinery is said to be promised later on.

The buildings being erected at Morrisburg are not in any shape for the installation of machinery, the floors not yet being concreted. The steel building, about 600 x 60 feet, is roofed with matched spruce, to be covered later with roofing paper, and a stone building, about 160 x 60, is in a similar condition, and work is proceeding very slowly, not a man being working when our representative visited the plant. While it is claimed that from $100,000 to $200,000 has been expended, not over $25,000 or $30,000 appears to have been outlaid so far.

The Morrisburg Town Council, however, is going on with the power scheme, having let the contract for the plant complete, to include the power lines to the factory, all excavations, machinery, etc., for $73,600, the plant to develop 1,100 horse-power. Mr. Birmingham, of Ottawa, is the contractor, and Mr. Shipman the engineer, the latter being the fourth engineer employed by the municipality up to the present time.

Mr. Allison, who is to get $2,250 cash for a site for the factory from the municipality, has deeded to the Tin Plate Company eight acres of the 240 acre farm he purchased for $15,000. He has also laid out 300 building lots, and should he succeed in selling them for $200 each he will net $62,250, and still have over 100 acres of land left.

The company has been very dilatory in making its returns to the Provincial Secretary, and although the Incorporated Companies Act provides that all companies failing to make returns by February 8 of each year shall be liable to a fine of $20 per day, the Tin Plate Company did not make returns until March 23, no fine being imposed, however. The returns show that of the $1,500,000 share capital $565,400 has been paid up, and $5,450 remains subscribed for and unpaid, shares not yet allotted amounting to $934,660. Of the stock subscribed for $548,300 has been allotted to various shareholders free from call, only $17,100 being subject to call, of this $8,249 having been paid in answer to the two calls already made. What consideration was received for the shares issued free from call has not been learned, but the returns show that 5,654 shares, equalling the paid-up capital of $565,400, have been allotted for property concessions.

The largest shareholder is J. Wesley Allison, he holding $321,500 worth; G. H. Meldrum, the president of the company, holding for himself and in trust three amounts of $41,000, $28,700, and $55,500, totalling to $125,200. The directors and their holdings are: W. P. Bull, barrister, — Toronto, $10,500; Arch. Campbell, M.P., $1,000; Hon. Richard Harcourt, $3,500; J. J. Main, manufacturer, Toronto, $10,500; E. P. Pearson, insurance agent, Toronto, $10,500, and A. C. Pratt, M.P.P., who holds stock worth $500. Other well-known shareholders are Hugh Graham, proprietor of the Montreal Star, $1,000; F. B. Polson, manufacturer, Toronto, $3,000; S. Nordheimer, manufacturer, Toronto, $2,500; Premier Whitnet, $500, and E. C. Whitney, Ottawa, $10,000. Altogether there are nearly fifty shareholders, a large number of these being in England and Ireland.

It is currently reported that the company's tin plate expert, Mr. Lewis, will leave shortly for England, his mission being to engage Welsh laborers experienced in tin plate making. There is some doubt expressed, however, regarding this, some saying that Mr. Lewis may not return to Canada if he makes the trip.

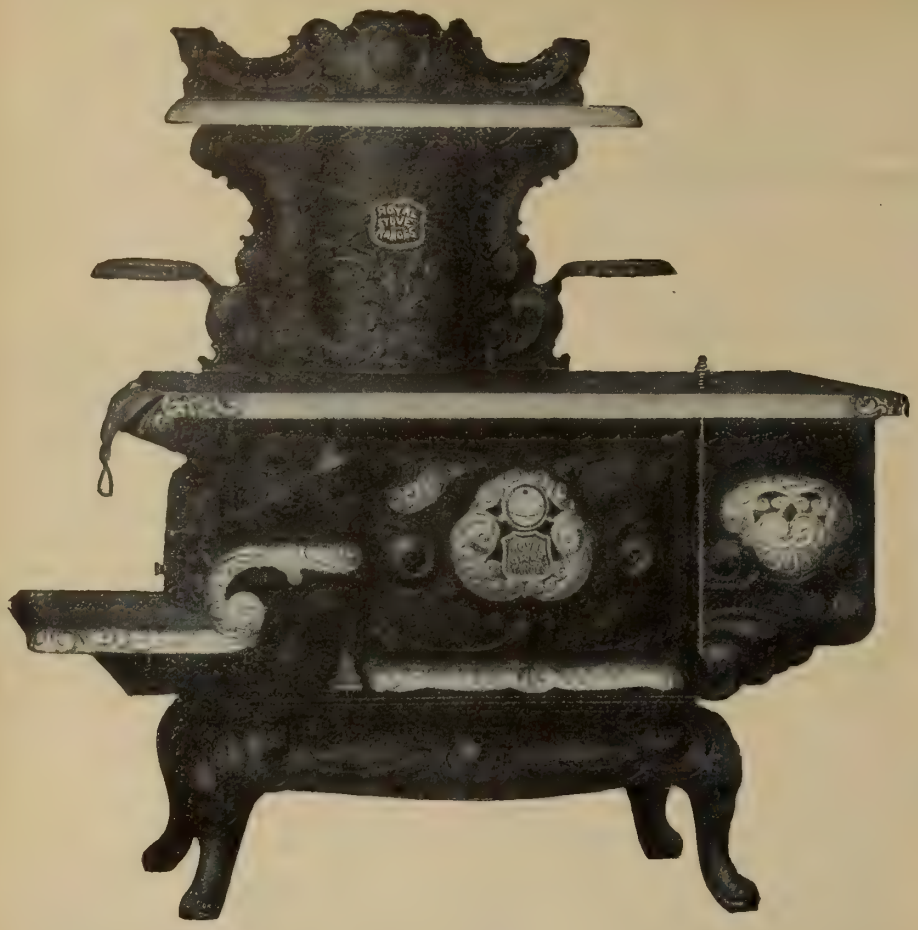
THE ANNUAL ORDEAL.

Hear him splutter,
Hear him cuss;
Listen to his
Awful fuss.
Like unto a
Bull he roars
As he clangs the
Iron doors.
Oh, what dreadful
Talk, egad!
Holy smoke, but
He is mad.
Bitter is his
Earthly cup;
Dad has fired the
Furnace up.

The tinsmiths of Hamilton have asked for a minimum scale of 30c. an hour. A decision must be given by May 1.

BIG ORDER FOR GURNEY'S.

The Gurney Foundry Company, Toronto, are shipping this week one of the largest hotel orders ever secured by a Canadian company, the order being for a complete kitchen outfit for the new C.P.R. Hotel at Winnipeg. One of the Gurney famous John Bull steel ranges, made in eight sections, and being about 35 feet in length, is the central piece of the order, it having fire brick six inches in thickness to protect the cooking section from the heat. A monster steam table, equal in length to the range, is included, along with batteries of charcoal boilers, steam copper kettles, dish washing machines, dumpling steamers and plate warmers, the latter being built separate from the stoves and similar in size to large house refrigerators. A Monfort roll warmer, the most elaborate thing of its kind ever installed in a Canadian hotel, is a special feature of the shipment, another being a patent egg boiler, having an automatic dial. By setting the dial for three minutes the eggs are allowed to boil only that length of time, being then lifted out of the water automatically.



Many other interesting features of the shipment cannot be explained at present, but Hardware and Metal hopes to be able to present photographs of the kitchen when all the apparatus has been installed.

The Gurney Foundry Company are also preparing to install a similar kitchen outfit in the new Clifton House at Niagara Falls.

STOVE FOUNDRY FOR PETERBORO

The proposed new stove works of the Dominion Stove Company are now assured to Peterboro, and the erection of the buildings will be gone on with at once. The stove factory will be a very extensive one, and in addition to it, J. F. Howard, for the company, states that rolling mills would also be added, provided a suitable site was furnished, as well as sufficient electric power at a moderate price. It is intended to start the stove foundry as soon as possible, and already designers and pattern-makers are at work.

Spring and Summer bring a call for gas and gasoline stoves and ranges and blue flame oil stoves. Now is the time to consult the catalogues and find out the improvements in this line, and the new things that will be put on the market the coming year. Rapid strides have been made in the construction of these goods, and they are far head of the gasoline and the oil stoves of the olden time.

You miss sales every day you lack The Imperial Oxford Range

Even this, the best Range anybody ever built, won't take care of **all** your trade (something in the Gurney line will, though).

But this range will make you more reputation and earn you more profit,—and do both quicker—than you'll believe until you prove it.

The little things about The Imperial Oxford this year make it the easiest range to run any woman ever saw. The big things about it make it a powerful help in selling more ranges,—because it's so wholly all right that every owner of one advertises it—and praises the dealer who sold it to her.

Why don't you be that dealer? Why don't you ask now what selling help we are ready to give you?—and what there is in the Imperial Oxford **for** you?

This year's Imperial Oxford is one range you can't honestly afford to get along without. New talking points, new selling points, and more selling help than you really need. Hadn't you better get started while the boom is young?

Mr. Dealer, Let Your Customers Know

about the excellent qualities of

The Empire Queen Range

Here are the opinions of two women: "We have in our home an Empire Queen Range. It is a handsome stove and most economical on fuel, and altogether the most satisfactory cooking range I ever had any experience with."

"I have secured excellent results with our Empire Queen Range, it being very economical on fuel, an even baker, has a plain, smooth surface, and is very easily cleaned."

Don't these opinions prove that ***The Empire Queen Range*** stands high in the women's estimation?

As next Friday is a holiday it will be necessary for Hardware and Metal to be published a day sooner than usual. Advertisers will kindly assist in letting our staff enjoy the holiday by sending in their changes of copy as early as possible.

BUSINESS SUCCESS.

On another page will be found an excellent article by one of Montreal's leading hardware merchants, on the means of attaining business success. No one is better qualified that he to give such advice, and the fact that it is the result of his own business experience should make it doubly valuable to all our readers.

Mr. Lariviere is a great friend of the young man in business. He takes as his motto, "Use the judgment of the old man, and the energy of the young one," and in his own fine store every facility is given the young man to learn the business thoroughly and gain the judgment which comes with experience.

To retail merchants everywhere, and especially to ambitious clerks, we commend the first article in this issue as the sincere expression of a man who has himself achieved what he speaks of.

OUR TWO COMPETITIONS.

Last week we announced that a prize would be given for the best photo of a seasonable window display shown during the month of April, and already we have assurances from several merchants and clerks that they will send along photos to be entered in the competition. Particulars of the competition are given on page 16 of this issue, and every reader, whether a subscriber to this paper or not, should read the conditions and try to win the prize offered.

It isn't the value of the prize so much as the education and experience gained by those competing that is to be considered most. And it is also an honor to be known favorably in the trade as a winner of competitions. Who in the trade hasn't heard of Mr. Bernier, of Montreal, as a writer of catchy hardware advertisements; Mr. Karges, of Woodstock, as a student of store arrangement, or Mr. Wetmore, of Halifax, as an artist in window display, and doesn't the reputation they have won make them more valuable to their employers ?

This week we make another announcement of particular interest to hardware clerks. Many clerks do not take much interest in the advertising of their store in the local paper. The boss thinks himself too busy to change his ads weekly, and the same old eyesore runs for weeks at a stretch. And the clerk who doesn't go to the boss and offer to conduct the advertising loses a golden opportunity. Some clerks are alive to their interests, and by making themselves useful to their employers are able to command better wages, besides laying a foundation for a future successful business career of their own.

We offer a handsome and serviceable fountain pen to the clerk who sends in the most catchy, best arranged and clearest worded advertisement of any line of goods carried in a hardware store, preferably, however, of seasonable goods in demand at this season. The ad. must appear in a Canadian paper in April, and a copy of the paper mailed to Hardware and Metal not later than May 1 next.

Who will win the honor—and incidentally the prize ?

TRADE EXHIBITIONS.

The second annual Pure Food Show being held in Toronto this week and next week, and the automobile shows being held in Toronto and Montreal at the same time, suggest possibilities of something of a similar nature devoted almost exclusively to hardware, heating, plumbing and sporting goods. The Pure Food Show has proved a remarkable success, and this year one stove dealer was shrewd enough to secure space for displaying his goods, drawing the attention of the women buyers by demonstrating the good qualities of the gas and coal ovens by cooking biscuits.

Why cannot this dealer's example be followed on a larger scale by the hardware and stove manufacturers ? A number of stove demonstrations, exhibits of lighting systems, displays of plumbing fixtures, washing machine demonstrations, displays of athletic goods and exercises, etc., should prove exceedingly interesting in the larger cities, particularly, and in the smaller cities progressive dealers can carry on an exhibition of their own on a smaller scale.

The Simmons Hardware Company, St. Louis, recently carried on 38 practical demonstrations in their store. The prospective purchaser could learn the easiest manner of operating the latest fruit slicer, and in another section of the store visit an all-day class in the art of china decorating. After a round of the different departments the visitor could retire to the reception and waiting rooms, which were supplied with telegraph and post office facilities, a bureau of information, retiring-rooms, daily papers, free books and magazines, telephones, writing desks, stationery, and a free stenographer.

Aside from the demonstrations in china decorating, probably the most interesting exhibitions are those of the French process steam coffee machines and chafing dishes, coal stoves and ranges, and the latest aluminum cooking utensils.

MEANS MUCH TO ONTARIO.

Two of the most important events in the political history of the Province of Ontario occurred this week, being announced almost simultaneously in the Wednesday papers. The report of the Municipal Power Commission, the establishment of which was first decided upon by the Ross Government, and the announcement that the Whitney Government would retain ownership and itself operate for the benefit of the people the rich mineral wealth of silver and cobalt contained in the area covered by the Gillies timber limit, of which so much has been heard recently.

So much has been said and written about the advantages to be gained by the Province of Ontario by the development of electric power at Niagara, and about the possibilities of our marvelous waterpowers becoming a substitute for the coal, that it is unnecessary to dwell upon these points at any length just now. The future of the manufacturing industries of Ontario de-

pends largely upon how Niagara power is to be sold, cheap power being necessary not only to manufacture successfully for the home market, but also to aid in developing an export trade.

It cannot be denied that powerful corporations were entrenching themselves behind vested interests and preparing to develop Niagara power with the aim of exploiting the people and making multi-millionaires of the few who are on the inside. But it is welcome news to the mass of the people to learn that the commission appointed by the Whitney Government have brought in a report which, if adopted and carried into effect, will safeguard the people's interests and ensure to them a share, at least, of the advantages to be gained from the exploitation of our wonderful natural heritage.

The commission advise that all municipalities capable of being served by Niagara power development join in erecting a power plant at a site already selected, and develop 60,000 horse-power, to be distributed to these municipalities for lighting and power purposes, and to be sold at low rates to manufacturers and others in the districts within reach of the plant, the existing power companies being left to sell their power to the various railway systems. The report distinctly favors public ownership, and while it will undoubtedly meet with bitter opposition the high standing of the men who composed the commission, and the array of facts presented, makes its final adoption almost certain.

The commissioners are satisfied that nearly two million dollars, after all fixed and established charges have been met, will be saved the province by the municipalization of Niagara power.

This saving represents a capital value of over thirty-seven million dollars, or thirty-three million dollars after the outlays incurred by manufacturers and others in the substitution of motors for steam mechanism, and other old-fashioned appliances, have been provided for. It is calculated that Toronto alone should really save two million dollars a year.

In connection with the announcement that the mineral bearing portion of the Gillies limit is to be retained by the province and mined for the benefit of the people, it has also been decided that the mineral deposits on the right of way of the Temiskaming & Northern Ontario Railway for about three and a half miles are to be disposed of by public tender, the successful tenderer to pay a cash bonus of not less than $50,000, an annual rental of $500 for the ground required for necessary buildings, and a percentage on the ore mined, increasing according to its value per ton. Although no mention was made of such an idea, it is understood that the decision to develop the Gillies limit on the public ownership plan carries with it the decision to erect a Government-owned reduction plant, which would be used not only to treat the ores from the area mentioned, but, at a reasonable price, the ores from private mines. This would settle the difficulties now experienced in the treatment of the Cobalt ores, which for the most part have been sent to New Jersey smelters, the miners being thus practically at the mercy of the owners of the smelters.

The two announcements mean much for Ontario's future, and are undoubtedly in line with the most advanced thought of the age. And in these days, when everything is tending towards monopoly and centralization, it is encouraging to see our legislators far-seeing enough to engage in the work of centralization themselves by establishing public monopolies where the interests of the great majority of the people are weighed in the balance with the interests of the few in the great corporations.

ATTEND THE CONVENTION

Owing to the receipt of a number of inquiries during the past week, it has been decided to call a convention of hardware merchants, to meet in Toronto, on April 13 (Good Friday), at 10.30 a.m., at the Rossin House; the management of the hotel having placed a room at the disposal of the delegates, besides offering special rates.

Mr. A. W. Humphries, hardware merchant, of Parkhill, has taken the initiative in calling the convention, and he is preparing some suggestions to lay before the convention. Ex-President E. R. Rogers, of the old hardware merchants' section, and others, have been invited to be present and address the delegates.

Lack of time will prevent the sending of letters to all in the trade, but every hardware merchant in Ontario should accept this notice as an invitation to attend and take part in the convention. While a full attendance cannot be expected on such short notice, it is hoped that a sufficient number will be on hand to ensure the organization of a strong association, the necessity of which has been amply proven in the letters published in recent issues of this paper.

Mr. Humphries requests that every hardware merchant who can attend, send a post card to the editor of HARDWARE AND METAL, stating that he will be on hand, it being necessary to know the number of probable delegates, in order to make proper arrangements for the gathering.

The day is a holiday and the railways offer special rates. Let at least a hundred promise to attend, and Ontario will soon be as well organized as Manitoba and the Northwest provinces.

Come to Toronto on Good Friday.

CEMENT IN HARDWARE STORES

With the building season so close at hand hardwaremen are stocking up with builders' supplies in larger quantities than in any previous year, for it is almost beyond a doubt that construction work will be carried on to a far greater extent than ever before.

This, then, is where the hardwareman has a chance to deviate a little from the beaten paths and open up new sources of profit. The opportunities are right at hand.

Have you noticed the gradual revolution of building systems during recent years? Have you watched wooden shingles and lath, plaster ceilings and walls, give way to ornamental metal work? And, furthermore, have you remarked the rise of reinforced concrete as the main material for building and construction operations of almost every nature? Are you aware that the far-seeing men are already referring to the "dawn of the concrete age?"

As a matter of fact this is the trend of the age in building work. We now have viaducts and tunnels, conduits and factory chimneys, made of reinforced concrete. Factories and warehouses are being erected in all parts of the country with this as their material. Builders have become so expert in handling it that some of the finest residences, as well, are now being built of concrete. They have the advantage of being warm in Winter, cool in Summer, and, so far as tests have been able to discover, absolutely fireproof.

It is certainly growing in popularity as a building material, and the future will see vast strides made in the methods of setting and molding, so that every conceivable architectural design will be reproduced.

Now is the time for the live hardwareman to associate himself with this spirit of progress. He will find it profitable to secure the agency for some high-grade cement. This will not necessitate the carrying of a very large stock, but by carrying on an energetic campaign he will be able to add considerably to his revenue.

As Portland cement is recognized as the best for all purposes, it will be well for the hardwareman to understand just what that name signifies, as some dishonest salesmen may try to palm off an inferior article as genuine Portland. The following resolution has been adopted by the London Chamber of Commerce: "That Portland cement be defined as a mixture of two or more suitable materials, intimately and artificially mixed in the requisite proportions, and afterwards properly calcined and ground, to which nothing has been added, during or after calcination, excepting that an addition not exceeding 2 per cent. of gypsum is permissible for the purpose of regulating the setting."

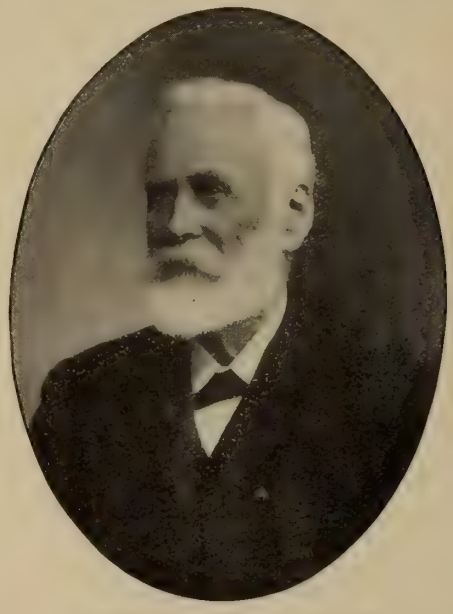
The important part of this definition is the word "artificially." There are some cements ground from rock in which the ingredients have been mixed by nature in a rough and ready manner. As the strata of these rocks are exceedingly variable in the chemical composition, it is plain that such cement is not genuine Portland. From the fact that the rocks are not usually mixed, it is called "Natural Cement," and great care must be exercised in distinguishing them.

The various cement manufacturers and importers would be glad to secure active and energetic agents all over Canada. It's up to the hardwareman!

QUEBEC ALTERS TRAVELERS' TAX.

At last a change in the obnoxious travelers' tax has been made. Manufacturers, jobbers and commercial travelers will be interested in the amendment which the Quebec Government has passed in respect to the Commercial Travelers' Act. A copy of the amended clause now reads as follows: "For each semi-annual license for a person not residing in the province to act as commercial traveler by soliciting or taking orders for or selling goods, wares or merchandise other than intoxicating liquors or by advertising or offering such goods for sale, by sample, catalogue or price list for a person, firm or corporation having no place of business in Canada: —Dealing with the wholesale trade only, $50; dealing with the retail trade, $100; dealing with the consumer, $200."

WESTERN BOARD OF TRADE CONVENTION.



Secretary F. T. Fisher, of the Edmonton Board of Trade, has sent a circular letter to the secretaries of all the western boards of trade announcing that the third annual convention will be held in the capital city of Alberta on Wednesday and Thursday, June 13 and 14. Last year the "Associated Boards of Trade of the Northwest Territories" met in annual convention in Regina and a full report of the proceedings was published in this paper. The creation of two new provinces raised the question whether division on provincial lines into two associations would not be advisable and it was finally decided to keep the organization intact, giving it the name of "The Associated Boards of Trade of Western Canada."

It is gratifying to note that care is being taken to remedy the one defect that was noticeable at last year's meeting. The delegates to the Regina convention failed, in most instances, to forward their resolutions to the secretary before the meeting and hence there was little opportunity given for previous consideration of the topics to be discussed. This year all resolutions must be in the hands of the secretary not later than May 24, such are the provisions of the by-law, but the secretary is asking as a favor that all resolutions be sent to his office not later than May 15. If the secretary's request is complied with there can be no doubt that the value and interest of the deliberations of the convention will be greatly increased.

Last year the best brains of the Northwest assembled in the convention at Regina as was evidenced by the high plane of the discussion. The character and standing of the delegates to the convention gave its conclusions weight throughout the entire west. The convention of the Associated Boards of Trade of Western Canada is the most important gathering of business men held in the west during the year, and all indications point to the most successful meeting this year in the history of the organization.

DEATH OF JOHN BERTRAM.

The death of John Bertram, of Bertram & Sons, Dundas, will be felt by all those who knew him in business and in public life with a real sorrow. Although Mr. Bertram had been unwell for a week previous, his end, which was caused by

The Late John Bertram of Dundas.

heart failure, was sudden and unexpected.

Mr. Bertram was born in Eddlestone, Peebleshire, Scotland, in 1829, and at Galashiels learned the trade of a machinist. In 1852 he married Elizabeth Bennett and came to Canada, working for a number of years in Dundas at the old Gartshore foundry.

In 1865 he formed a partnership with Robert McKechnie, the firm being known as McKechnie & Bertram. From a small start the firm grew to be one of the most reliable and widely known of the kind in Canada. By honest work and honest dealing with their customers it was not many years before their iron and wood working machinery and tools were known both in this country and in other parts of the world. In 1886 Mr. McKechnie retired and Mr. Bertram took into partnership his two sons, the firm then becoming known as Bertram & Sons. The wonderful development of their business and its recent sale to the Niles-Bemont-Pond Company is well known to all readers of this paper.

In speaking of Mr. Bertram, A. R. Williams, of the A. R. Williams Machinery Company, Toronto, who has known Mr. Bertram for nearly forty years, said: "He was one of nature's noblemen. There was nothing small about him. He was one of the finest men I ever knew. In disposition he was kindly, and in business he was diligent and honorable." Mr. Bertram was reeve, deputy reeve and mayor of Dundas, and in his public capacity was highly thought of by the people whom he served.

AN OLD SUBSCRIBER.

A. W. Humphries, hardware merchant, Parkhill, called on Hardware and Metal in Toronto a few days ago, he being very enthusiastic regarding the proposed organization of a retail hardware dealers' association in Ontario. "Up our way," said Mr. Humphries, "there are dealers who are selling wire at grocery margins, while nails which cost $2.30 laid down are being presented to the public for $2. One firm, composed of men who are somewhat inexperienced in hardware selling, are also disposing of glass at the closest possible margin, not making the usual one-fifth allowance for breakage. These instances show the necessity of an association through which a better feeling between competing merchants can be created and such evils mitigated.

"I think I can claim to be your oldest subscriber," added Mr. Humphries, when leaving. "I was in your old office on Jordan street when your first issue was being printed, being taken over to see the first paper by one of the old firm of M. & L. Samuel, Benjamin & Co. I subscribed at once, and Mr. Humphries says he finds Hardware and Metal very helpful to him in his business, the departments on "Effective Advertising," "Window Dressing," and other subjects being watched carefully by him.

Another reminiscence of Mr. Humphries was of the days of the Patron co-operative stores, one of which existed in Parkhill. When it finally went under and Mr. Humphries took over the stock he found that the Patrons had been paying more for some of their goods than he had been selling at retail. Several lines had been unloaded upon the farmer buyers by jobbers at list prices, no discounts being allowed. It can readily be seen that the Patron competition wasn't very serious—and certainly not so serious as the mail order competition of today.

HARDWARE TRADE GOSSIP

Quebec.

L. Gregoire, plumber, of St. Jovite, was in Montreal on business this week.

Mr. Rolland, of the Rolland Paper Company, St. Jerome, visited Montreal a few days ago.

T. H. Newman, of Caverhill, Learmont & Co., Montreal, is spending a week or so in New York.

Mr. Paterson, of the Paterson Manufacturing Company, Toronto, visited Montreal on Monday.

Arch. Macfarlane, manufacturers' agent, Montreal, is at present on a trip to Chicago and the west.

J. Ernest Millen, of John Millen & Sons, Montreal, spent the week at the Toronto automobile show.

D. Lorne McGibbon, managing director of the Canadian Rubber Company, is enjoying a trip to the Bermudas.

Mr. Meredith, of Meredith & Church, general merchants, Depot Harbor, Ont., was in Montreal during the week.

G. A. Willis, of the Norton Manufacturing Co., Hamilton, spent one day of this week in Montreal on business.

T. Mortimer, of Toronto, representing Harper, Limited, and the Irwin Auger Bit Co., visited Montreal this week.

A. T. Porter, Montreal, representing Peres & Co., the German cutlers, has just returned from a successful western trip.

John A. McLaren, representing the Canada Brass & Supply Co., London, Ont., called on the Montreal trade this week.

B. B. Cherry, representing Sargeant & Co., New York, called on the Montreal wholesale trade on Wednesday of this week.

A. H. Campbell, of A. C. Leslie & Co., Montreal, has returned to business after his recent trip, greatly improved in health.

Jas. A. Brook, Montreal, Canadian manager for Craven & Speeding Bros., Sunderland, Eng., is on a business trip to British Columbia.

H. R. Ives & Co. are putting up an extensive addition to their works at the corner of William and Queen streets, Montreal.

E. Nagle, formerly with the Fensom Elevator Co., has taken a position as second engineer at the new Singer factory, St. Johns, Que.

Alfred Majeau, plumber and tinsmith, of Joliette, visited Montreal this week, and placed orders for a considerable quantity of galvanized iron.

D. B. Acer, formerly with the Ogilvie Flour Mills Company, has been appointed Montreal city traveler for H. W. Petrie, machinery merchant.

M. Gregory, 13 St. John street, Montreal, is placing the Vulcan smoke consumer and fuel economizer in several large factories of that city.

J. M. Guindon, hardware merchant at 1054 St. Catherine street, Montreal, will go out of business on or about May 1, and intends removing to Cobalt.

Major J. A. Currie, president of the Imperial Steel & Wire Company, Toronto, visited the Montreal office of Hardware and Metal on Wednesday.

J. Roy & Co., plumbers, Cookshire, Que., will move into a new store and will carry a complete line of graniteware in addition to their plumbing supplies.

Cyrus A. Birge, of the Canada Screw Co., Hamilton, and formerly president of the Canadian Manufacturers' Association, was in Montreal on Tuesday of this week.

G. Percy Buckon, assistant manager of the Metallic Roofing Co., Toronto, was in Montreal on Monday of this week, stopping off on his way to St. John and other eastern points.

H. B. Cartray, who has been in the employ of Lewis Bros., Montreal, for the past six years, has been promoted from the auditing department to the city traveling staff.

A. Sweet, of A. Sweet & Co., general merchants, Winchester, Ont., was a visitor at the Montreal office of Hardware and Metal last Tuesday. Mr. Sweet is much interested in the proposal to organize a hardware dealers' association, which he considers would go a long way towards smoothing out the difficulties of retailers.

Ontario.

Michael Schmidt will open up a tin shop in Chepstow.

R. Scott of Mount Forest was in Toronto during the week.

W. R. Hobbs, hardware merchant, Tillsonburg, is recovering from a month's illness.

W. Mashinter & Co., plumbers and steamfitters, have removed from 97 to 90 Adelaide street west, Toronto.

S. Norfolk, of Haileybury, has his hardware store nearly completed, and will soon be ready for business.

Alex. Saunders, manager of the Goderich Organ and Bathroom Woodwork Co., was in Toronto and Montreal during the week.

Frank Marshall Purdy, for many years bookkeeper for the plumbing firm of Purdy, Mansell & Co., Toronto, died of acute pneumonia Saturday last.

Norbert O'Leary has resigned from the Sawyer & Massey Co., Hamilton, to become accountant for the Standard Plumbing and Heating Co., Winnipeg.

J. Milligan, cashier for Rice Lewis & Son, has resigned to take a position with the Grip Company. Mr. Milligan was presented by his fellow employees at Rice Lewis & Son's with a handsome bookcase.

W. J. Fulton, who has for some time been traveling salesman in Ontario for the Dominion Radiator Company, will be the representative of that firm in Winnipeg.

W. H. Rumball, of South Woodslee, who recently bought out W. Conn & Son's hardware store at Aylmer, intends continuing both businesses, his store at South Woodslee being managed by his brother. Mr. Rumball intends removing his family to Aylmer and will make several changes and improvements in his new store. Mr. Rumball is a hustling young man, and his enterprise should bring him success. W. Conn has retired from business, while his son, Ack Conn, will manage Conn's Fair at Aylmer in future.

J. W. Johnston, formerly second vice-president of the Pease Foundry Company, Toronto, and who recently removed to Detroit, was in Toronto this week. He is now pushing the manufacture and sale of a steam heater and ventilator in the United States for which the Pease Company have the Canadian rights. His two sons, C. C. and F. W., are also now in the States, the former being traveler in Wisconsin for the Peninsular Stove Works, and the latter traveling in Michigan for the United States Heater Company.

Western Canada.

Crowe Bros. have opened up a stove, tinsmithing and plumbing store in Annapolis, N.S.

R. A. Ogilvie, for several years with J. A. Flett, of Vancouver, has opened up a hardware store in Victoria.

Insull & Field, hardware merchants, of Bradwardine, Man., have dissolved partnership. F. & J. Field will carry on the business.

The George Hunter Hardware Company, of Vancouver, are having a new building erected, which they expect to occupy about July.

J. E. McRobie, secretary of the Western Retail Hardware Association, was in Portage la Prairie last week. This week he is visiting the trade in the Hartney and Souris districts.

J. C. Gilpin, of St. Mary's, Ont., who has been for many years in the hardware business, is in the west assisting his son and R. G. Hamilton to select a good point for a hardware store.

H. V. Lawlor, paint specialist for Marshall-Wells Co., was in Winnipeg for a few hours last week after an extended trip west in the interests of "English" paints. Although he had been away since the first of the year he was away again in less than 24 hours.

Elsewhere.

The J. D. Warren Manufacturing Company, Chicago, Ill., extensive manufacturers of hardware store fixtures, have outgrown their present building and will erect an additional plant at Quincy, Ill.

Messrs. Arthur Kingsford Wilson and Leslie Jackson Coombe have been appointed as directors of Spear & Jackson, Sheffield, England. These gentlemen are respectively the son and nephew of the managing director, John Kingsford Wilson, and have both taken an active part in the management of the business for some time past.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Irwin's Auger Bits have adopted the standard lists Discount 47½ per cent.

Wringers have advanced.

Building Paper—New lists are announced.

Solder has advanced ¾ cent.

Ingot Tin is quoted at 41 to 41¼c. on a rising market.

Ingot Zinc is somewhat weaker, being quoted ¼c. lower.

Old Material—Advances have been made in copper wire, light copper, heavy red brass, yellow brass, lead, machinery cast scrap and old rubbers.

TORONTO.

Bar Iron—Dealers are now asking $2.20.

Pig Iron—Advances have been made in two lines.

Antimony—With no stocks, 20c. is now quoted.

Old Material—Higher prices are offered for copper and brass.

Wringers—Prices have advanced $3.00 per doz.

Building Paper—Prices of some lines have been lowered 5c.

Auger Bits—New lists on Irwin Auger Bits are being issued.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 6, 1906.

Sales of all hardware lines have been showing up splendidly during the past week. This is perhaps due, more than anything else, to the fact that the first of April saw the inauguration of the Summer rates, and this, of course, made shipments freer.

Prices are all stiff on shelf goods, and although no advances have been made in this line the figures previously quoted have been very strictly upheld. Irwin's auger bits have adopted the standard lists and are being quoted at a discount of 47½ per cent. This is the only change to be noted in this class of goods.

A general advance has been declared in wringers, new lists having been issued in all lines. New lists have also been prepared on building paper, but at time of writing arrangements are not sufficiently definite to give the new prices. It is expected, however, that revisions will be made in the price of dry and tar sheathing.

AXES — We still quote as follows: $7.60 to $9.50 per doz.; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen: adze handles, 34 inch, $2.20 a dozen: pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—No change has taken place in the tone of this market, and quotations remain $4.25 for cold blast.

RIVETS AND BURRS—Shipments of these goods have been more numerous and of larger volume during the past week, owing to the opening of navigation in the west, which permits more favorable freight rates. We are quoting as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—The market is sluggish and sales are hardly up to expectation. We still quote the following prices: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS — Nothing further of note has transpired with reference to this branch of the trade since the advance in price was made some few weeks ago. We quote: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—The turnover is increasing from week to week, and prices are steadily held at the following figures: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSENAILS — Conditions are unchanged. Our discounts are still as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—So much building is already under way in all parts of the country that orders for wire nails are very large. We still quote prices: $2.15 per keg f.o.b. Montreal.

CUT NAILS—Trade is normal. We quote: $2.20 per keg f.o.b. Montreal.

HORSESHOES—We quote: P.B. new pattern, base price, $3.50 per 100 pounds.; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Orders for these goods are perhaps not as far advanced as at this time last year, owing largely to the fact that jobbers have been delayed in getting out their catalogues. However, sales of ammunition and guns are very encouraging and speak well for prospects of the sporting goods trade this season.

BUILDING PAPER — Trade is looking up fairly well and manufacturers expect soon to be doing their normal Spring business. New lists are being issued this week quoting slight changes in two or three lines, but at time of writing definite figures are not available.

CEMENT AND FIRE BRICK—Fire brick is still in very brisk demand, and orders for cement, too, are coming in better than at any time this year. We quote following prices: "Lehigh, Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood, $3.40: Belgium, $1.60 to $1.90 per barrel; ex-store. American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21: American, $30 to $35: White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We quote the following prices: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55: 1-2 inch, $3.35: 9-16 inch, $3.30: 5-8 inch, $3.20: 3-4 inch, $3.05: 7-8 inch, $3: 1 inch, $2.95.

FREEZERS—Local jobbers are making a feature of this trade now, and all are showing some nice samples of this season's models. Orders are coming in fast and everything points to a good season's business. We quote as follows: American Twin, 2 qt. 12.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13: Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25: Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH — Output of the local wholesale houses is large and prices are still quoted: $1.45 per hundred sq. ft.

BINDER TWINE—We are still unable to give prices on this line. Orders have been very large.

RAW FURS—Prices to dealers are as follows:

		No. 1.	No. 2.	No. 3.	No. 4.
Bear	Black	$12 00	$8 00	$4 00	$1 00
"	Yearlings	7 00	5 00	2 00	0 30
Fisher		7 00	6 00	5 00	....
Fox	Red	3 00	2 25	1 00	0 20
"	Cross	5 00	4 00	2 00	0 50
Lynx		7 00	5 00	4 00	
Marten	Dark	10 00	5 00	2 0	0 50

Wolverine		5 00 to 6 00			

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, April 6, 1906.

With the commencement of April and the Summer freight rates a greatly increased business in all lines is felt. The activity of the previous week is being continued and large shipments are going out.

Some changes have been made in augur bits. On Irwin bits the new American prices have been adopted with discounts remaining the same. An increase has been made in Irwin car bits and boring machine augers, but the discount has been correspondingly increased.

Dry Surprise, dry sheathing and tar sheathing building paper have been lowered 5c., but other lines remain unchanged. An increasing demand in all papers is being experienced.

Wringers have gone up $3.00 per dozen all around, excepting Ajax wringers, which have advanced $6.00 per dozen. The increased cost of rubber, other material and labor, has necessitated this.

Cement prices are firm and a heavy demand is being felt by manufacturers, who are working to the limit to fill orders. Some manufacturers say a slight advance is not improbable before a great while.

AXES AND HANDLES—Ordinary amount of business being done. Prices remain firm.

CUTLERY AND SILVERWARE—Trade shows a continued improvement.

SPORTING GOODS—Business has been very fair.

WASHING MACHINES—Trade is fairly active at present.

CHAIN—Sales are fair. We quote: as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING— Considerable activity is being felt in all lines.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—An active business is done in barbed wire and accessories. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—A large amount of wire nails is being sold just now.

CUT NAILS—This line also shows greater sales.

HORSENAILS—Considerable activity in all lines. No price changes.

HORSE SHOES—Demand much the same as usual, with no changes. Market firm. We still quote. P.B. base, $3.65: "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern. No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes. No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes 1 to 4, $7.00. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—The usual amount of business is being done.

RIVETS AND BURRS—Some good sales are reported. Business steady.

SCREWS—Large quantities are now being used.

BOLTS AND NUTS—Prices are firm, business good.

CORDAGE—We now quote as follows: On binder twine, 500 feet, 10c. lb.: 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13c. lb. Golden Crown, 500 feet, 9 3-4c. lb. On Gold Medal Brand (imported), 600 feet, 12 1-4c.; 650 feet, 13 1-4c. Discount for car lots. Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

CEMENT—Prices in cement are very firm and a large business is being done. We are quoting as follows: For carload orders, f.o.b., Toronto, Canadian Portland, $2.00. For small orders ex warehouse, Canadian Portland, $2.15 upwards.

FIREBRICK—Prices continue unchanged; English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 35c.

BUILDING PAPER—An increased demand is felt as the building progresses. A lowering of 5c. has been made on some lines.

HIDES—There was a rise of a cent to two cents throughout the list on the first of the month. Quotations are:

Hides, inspected, steers, No. 1	0 11	
" " " No. 2	0 10	
" " cows, No. 1	0 10½	
" " No. 2	0 09½	
Country hides, flat, per lb	0 08½	
Calf skins, No. 1, selected	0 14	
" " No. 2	0 12	
Dekins	0 75	
Sheep skins	1 40	1 55
Horse hides, No. 1	3 25	3 50
Rendered tallow, per lb	0 04½	0 04¾
Pulled wools, super, per lb	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 6, 1906.

During the past week stock metals have firmed up in every particular, and in some cases substantial advances in price have been made. The metal markets generally show a remarkably good demand for this time of year, and a decided tendency towards higher quotations in the near future.

In pig iron the prices we have been quoting for some time past are still ruling and are held very firm. In a couple of weeks, however, as soon as navigation on the St. Lawrence has opened some slight modifications will have to be made in price for import orders; that, however, will not by any means infer that the market is weakening.

Ingot tin has furnished the sensational feature of the week. Metal merchants here are firmly of the opinion that higher prices will very soon be in vogue. For the present an advance of 1-2c. over last week's prices hardly conveys any adequate idea of the vastly stronger market. It is reported on excellent authority that this jump is entirely a healthy one, being caused purely by shortage in supplies.

Copper is even stronger than last week, although prices are not changed. American advices are that there will be a noticeable scarcity, and it is predicted that great difficulty will be experienced in filling deliveries for requirements.

Pig lead has again been fluctuating, but the tendency at the present time is somewhat firmer and it is expected that higher prices will be asked shortly. This metal is much firmer than last week, but is quoted at the same prices.

Antimony is in a worse condition than ever before. There has been a tremendous demand for it on the local market, but stocks of any kind of antimony are practically bare and it will be impossible to renew them from the manufacturers before July at the earliest. All the local jobbers state that they could have sold many times the quantity of their stock this winter, if they had been able to get it.

The only ingot metal to show any weakness during the week has been zinc spelter, which is quoted somewhat lower than at our last report. This does not make any great difference in the state of affairs, as sales of zinc at this time of the year are usually small.

CANADA PLATES—We quote as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

COPPER—A scarcity is considered a possibility in the very near future and the market this week is very firm. We still quote: Ingot copper, 20 1-2c. to 21c.; sheet copper, base sizes, 25c.

INGOT TIN—This metal shows more strength than any other on the market, and from present appearances the dealers are looking for greatly enhanced values during the coming summer. It is stated that there is a general shortage of supply which will make it difficult to obtain deliveries. We quote this week: 41c. to 41 1-2c.

PIG LEAD—In spite of fluctuations in value, which are still in order, the market this week is considerably firmer than at the same time last week. We still quote: $4.40 to $4.50.

PIG IRON—We quote as follows:

"Dom.," No. 1.	$19.50 to $20.00	delivered	Montreal.
Usual difference in price for ower grades			
Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	24.00	"	"
" (special)	23.00	"	"
" No. 3 (soft)	22 75	"	"
Summerlee No. 1	25.00	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.50	"	"

BOILER TUBES—Our prices: British and American tubes, 1 1-2 inch, 8 1-2c.: 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch. 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.: 5 inch, 45c. Price per foot net.

TOOL STEEL—We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's. 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL — We are still quoting as follows: Sleigh shoe, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards: square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Our prices are as follows: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78: 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch. $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON — Last week's advance of 10c. on all gauges and sizes has been steadily maintained and we still quote as follows: Queen's Head, 28 gauge, $4.35; 26 gauge, $4.10; 22 to 24 gauge, $3.85; 16 to 20 gauge, $3.60; Apollo, 28 gauge, $4.20; 26 gauge, $3.95: 22 and 24 gauge, $3.95; 16 to 20 gauge, $3.95; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Comet, 28 gauge, $4.20 to $4.45; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.45; Bell brand, 28 gauge, $4.30 to $4.35; Fleur-de-Lis, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.95; 16 to 20 gauge, $3.95; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.05; Sword and Torch, 28 gauge, $4.15; in less than case lots, 25c. extra.

BLACK SHEETS—We quote as follows: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge. $2.30; 8-10 gauge, $2.45.

ANTIMONY—Prices in British markets have gone up to a phenomenal figure, and at that it is almost impossible to fill requirements. Canadian dealers report their stocks to be very light, with no possibility of replenishing them with new supplies before June or July. We are quoting: 19c. to 19 1-2c. for Hallett's.

TIN PLATES—Our prices remain as follows: Cokes, base size, i.c. 14 x 20, $4; charcoal, base size, i.c. 14 x 20, $4.25.

TERNE PLATES — The prevailing price is $7.

INGOT ZINC—The market this week is somewhat easier. The demand is seasonably small, and we quote: 6 3-4c. to 7c.

SHEET ZINC—We are still quoting: $7.50 in casks; $7.75 in less than casks.

SHEET LEAD—Our prices: 2 1-2 lbs., 5 1-2c. by the roll; 3 lbs. and heavier, 5 1-4c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON — We are still quoting: $2.05, f.o.b., Montreal.

OLD MATERIAL—Metals are much stronger again and advances have been declared in both the metal and rubber markets. Practically all lines of metals are demanding higher prices this week, and in the rubber market, where a lowering of prices is generally looked for at this time of the year, quite the reverse has happened. This is owing to the peculiar Winter we have had, since there is likely to be less rubber collected, and it will no doubt be in dealers' hands earlier than usual. Manufacturers, therefore, are advancing a little now in expectation of not getting so much later on when the collections usually come in. We quote: Copper wire, 15c.; light copper, 14c.; heavy red brass, 13 1-2c.; yellow brass, 10c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13.50; wrought scrap, $12; stove plate scrap, $11; mixed rags, 90c. to $1 per 100 lbs.; old rubbers, 7 1-2c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto April 6, 1906.

The coal strike and its effects are the chief topic for discussion amongst metal men this week, the general impression being that the strike will not last long. If the strike resolves itself, however, into a long drawn out contest between the full pocket books of the mine owners and the empty stomachs of the miners, defeat for the men is considered certain, coal dealers and operators being the chief gainers by jumping prices up. So far hard coal has remained sationary and the large stocks on hand indicate that prices will remain steady for some time. On the other hand soft coal is fluctuating daily and it is unsafe to quote prices more than a day ahead.

Bar iron has been advanced 10 cents and Midland and Hamilton pig is also quoted higher. In some quarters mill men who are not booked ahead are willing to make concessions on large orders to get business, but the general tone of the market is strong with a feeling that prices will be well maintained and even firmer conditions materialize.

The great strength shown in outside markets makes it comparatively easy to do business as prices are more stationary here than in markets where foreign quotations are followed daily. Ingot tin is held at record prices outside, but local dealers have not made any change. Antimony is up to 20 cents, over double what it was a year ago.

PIG IRON — Orders are fair and prices very firm. The mills which are booked for a long time ahead are holding out for higher prices.

Middlesboro, f.o.b., Toronto	$21 50	$22 50
Hamilton, No. 1, at furnace		21 00
" No. 2, "		20 50
Midland, No 1, "		21 00
" No. 2, "		20 50
Radnor, at furnace		30 00
Londonderry, f.o.b. Toronto, No. 1		22 00
" " " No. 2		21 50

BAR IRON—Local dealers have followed advances made some time ago in outside markets and we now quote: $2.20 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Record prices are being asked elsewhere, but the effect has not been felt yet other than to increase the demand. We still quote: 40c. per lb.

TIN PLATES — Demand keeps up satisfactorily and the market is very strong.

GALVANIZED SHEETS — A better demand exists and prices continue the same.

BRASS—A probable scarcity of copper, together with the higher prices now ruling, makes brass firm and strong.

BOILER PLATES AND TUBES—The demand is reported steady, and we quote as follows: Plates per 100 lbs., $2.20; heads, per 100 lbs., $2.45; tubes. per 100 feet, 1 1-2 inch, $8.50; 2, $8.70; 2 1-2, $10.50; 3, $11.80; 3 1-2, $15.80; 4, $20.00. Terms, 2 per cent off.

LEAD—The market is very firm and many dealers look for higher prices. We still quote: Canadian pig lead at $4.40 and English pig at $4.65 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—The market is very active, the demand being strong and prices firm. We still quote as follows: 7 1-4c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

COPPER—A stronger demand is evident and prices held strongly with some talk of a shortage being likely. We still quote as follows: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

ANTIMONY — With no stocks on hand and a strong demand in evidence prices have gone up again and 20c. is now being quoted. A year ago only 9c. was being asked.

OLD MATERIAL—Scrap iron and old metals were not in such demand during the Winter that has just gone, as in other Winters. The almost entire absence of snow had the effect of lightening the shipments and lowering the price of old metals owing to the freedom with which transportation was carried on between the producing points and the mills. The demand, however, is holding very steady even under these conditions, as the price of pig iron has been firm and higher. Old brass and copper is experiencing an upward tend-

ency at present in sympathy with the increased ingot prices, and dealers say they have a market for far more than they are receiving. As it is, all metals are more active than is usually the case at this time of year, and the probabilities are that prices will remain fairly firm for some time. Dealers' buying prices are as follows: Heavy copper and wire, 15c. per lb.; light copper, 13 3-4c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $10 to $10.50, No. 2 wrought $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel $5; old rubbers, 7 1-4c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The strike has caused soft coal to fluctuate, and all kinds of high prices are being asked. The quotations below, therefore, are merely nominal. Prices are unchanged.

Anthracite in cars at bridges, egg, stove and nut, $5.50; grate, $5.25; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; 3-4 inch, $1.40, run of mine, $1.30, nut, $1.25; N.P. and S., $1.00; slack, 75c.; box cars 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.60; 3-4 inch, $2.50; mine run, $2.40; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

U.S. IRON AND METAL TRADES.

From the Iron Age, April 4, 1906.

There is a good deal of perplexity in the trade over the best course to pursue in view of the labor troubles in the bituminous and anthracite coal fields. To the iron trade at large the production of bituminous coal is a much more important matter than the supply of anthracite. The anthracite furnaces, nearly all of which use a considerable part of coke in their mixtures, will be somewhat embarrassed and may face a partial stoppage. To what extent this will be offset by a decline in the consumption as the result of coal scarcity cannot be well determined so early.

There has been some buying of pig iron by steel works and foundries as a protection against a protracted strike, but the movement has reached only moderate proportions. There has been more interest in the market, however, quite irrespective of this phase of the situation. The foundry trade is on the tiptoe of expectation over the outcome of the bids for 12,000 tons of iron for the Westinghouse interests.

The Steel Corporation has bought a little Bessemer iron and is expected to purchase more soon for April requirements. The furnaces of the corporation have broken all records during March, having made in that month 1,001,226 tons, as compared with the best previous achievement, 947,476 tons, in October, 1905. The production of Bessemer and open hearth steel ingots, too, was greater in March than ever before. It amounted to 1,268,933 tons, as compared with the best previous record of 1,179,267 tons in January.

The rail mills are under increasing pressure and it is becoming a serious problem how to arrange rolling sheets so as to meet deliveries far toward the end of the year. Reports are current that at least one large system is seeking relief by turning to foreign rail makers, hopeless though that step may seem. During the past week sales have aggregated about 35,000 tons in moderate sized lots.

The structural mills are crowded and some very good business is coming up. There are now in the market four railroads whose aggregate requirements of bridge work foot up to 25,000 tons.

After a protracted meeting last week the manufacturers of steel bars have reaffirmed prices. It is understood, however, that an adjustment on season contracts has been made with agricultural implement makers.

LONDON METAL MARKETS.

From Metal Market Report, April 4, 1906

PIG IRON—Cleveland warrants are quoted at 48s. 4d. and Glasgow standard warrants at 48s. 4d, making prices as compared with last week 1d. higher for Cleveland warrants and 1d higher for standard warrants.

TIN—Spot tin opened strong at £174, futures at £168 10s., and after sales of 420 tons of spot and 260 tons of futures closed easy at £172 5s. for spot, £169 for futures, making price compared with last week £4 higher on spot and £2, 12s. 6d higher on futures.

COPPER—Spot copper opened firm at £84 15s., futures £82 5s., and after sales of 100 tons of spot and 25 tons of futures, closed easy at £84 5s. for spot, and £82 5s. for futures, making price as compared with last week same on spot and 10s. higher on futures.

SPELTER — The market closed at £25 2s. 6d, making price as compared with last week 7s. 6d higher.

LEAD—The market closed at £15 12s. 6d, making price as compared with last week 5s lower.

Nova Scotia Trade News.

Halifax, N.S., April 4.

Trade was never better in Cape Breton than this season. The hardwaremen who have representatives in that district say that the business from that district is beyond expectations, and the travelers report that the industrial development is greater than has been. New mining properties are being opened, and the old properties are being developed more extensively than ever. The miner was never in so prosperous condition, and everything points to a banner year in the great coal producing region of the Dominion.

* * *

The local hardware markets are very steady, and prices show little change. Lead pipe has dropped ten cents per hundred pounds, and is now quoted at $5.60 per hundred pounds. The manufacturers have advanced the price of nets, but the jobbers here have not as yet made any change in the price. They have held a meeting when the matter came up for consideration, but they failed to agree on a price. A meeting of the Maritime Hardware Association will be held at St. John this week, when the question of fixing the price will be settled. It is probable that Messrs. Sterns and Robertson, of Halifax, will attend the meeting.

* * *

Trade is good in all lines, such as are in demand in the Spring. The sales of barbed and plain wire for fencing are very heavy; $2.65 per hundred pounds is the price quoted.

* * *

All records were broken at the Dominion Iron and Steel Company's plant last week, when one shift in twelve hours turned 1,112 finished rails. The preceding day shift rolled out 915 rails, which made a grand total of 2,027 rails for 24 hours' work. It is stated that the output for the twelve hours night shift beats all Canadian records for a like working time, being considerably in excess of the best which has so far been done at the "Soo." The hourly output at the mill, day in and day out, averaged 150 rails, the greatest number turned out in that space of time being 180. The men claim that they could easily surpass the world's record for rail making if the open hearths could keep them continually supplied with fuel.

* * *

The coming Summer promises to be a busy one for the Dominion Coal Co., both in respect to output of coal and development. The sinking of a new shaft at Reserve close to the present bankhead is now well under way. This will again tap the Emery seam, and when completed will be the fourth shaft which the Reserve mine is operating. Recently the work of sinking a new shaft at International colliery at Bridgeport was begun for pumping purposes. Upon the sinking of this shaft to a depth of three hundred feet, the water will be taken from the International colliery by means of tanks, and this will allow the discontinuance of the pumping system, which will materially lessen the expense of the colliery. It is also reported that the company has in contemplation the sinking of a shaft in the same vicinity to tap the Emery seam at a depth of about 700 feet. This work will be of the greatest importance to Bridgeport, as it will greatly increase the output of the International colliery.

* * *

The Mabou and Gulf Coal Co. have about 125 men working at their colliery getting it in condition for a large output, which will be taken from the new seam. The company also have fifty men employed in dismantling the trestle and converting it into a new coal pier on the top of the wharf in Cape Breton. The name of the coal will be the "Mabou Diamond Coal."

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, April 6, 1906.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

Abbreviated Market Notes for Current Week.

Pig Lead—Advanced 15c. per cwt.
Turpentine—Advanced 3c. per gallon.

Spring business continues very active, local jobbing houses reporting the volume of business much larger than in former years. Except for the advances in pig lead and turpentine, noted above, there have been no changes of importance in the price lists.

GAME TRAPS—Discounts are now as follows:

H. & N., discount	50 and 5 p.c.
Victor, "	65 and 10 p.c.
Newhouse, "	35 p.c.
Bear	$7 each

SCREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows:

Cold blast lanterns	$5 25 per doz.
Coppered cold blast lanterns	7 25 "
Cold blast dash "	7 75 "
Lift Lanterns	4 25 "

BLUESTONE—Selling well at $6.25 to $6.50 per cwt.

WIRE—Prices are steady. We quote:

Barbed wire, 100 lb				$2 90
Plain galvanized, 6 to 8	$3 39	9	$2 50	2 90
" " 10	3 50	12		3 10
" " 13	3 20	14		3 90
" " 15	4 45	16		4 60
Plain twist				3 00
Staples				3 50
Oiled annealed wire, 10	$2 96	11		$3 02
" " 12	3 10	13		3 20
" " 14	3 30	15		3 45

Annealed wires (unoiled) 10c. less.

HORSESHOES—Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

HORSENAILS—Revised list and discounts are now as follows:

	per lb.		per lb.
No. 10	$0 20	No. 6	$0 28
" 9	0 22	" 5	0 32
" 8	0 24	" 4	0 40
" 7	0 26		

Discounts are quoted as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Price is now $2.70 per keg.

PRESSED SPIKES—Prices are as follows:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ¾ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

SCREWS—Discounts are as follows:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

NUTS AND BOLTS—Discounts are unchanged and continue as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

RIVETS—Quoted now as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	34½
" No. 12	40

COIL CHAIN—Unchanged in price. We quote:

Coil chain—

3-16 inch	$5 25	¼ inch	$7 20
5-16 inch	5 20	⅜ inch	4 60
7-16 inch	4 45	½ inch	4 30
⅝ inch	4 10	¾ inch	4 00

SHOVELS—Discounts on spades and shovels continue 40 and 5 per cent.

HARVEST TOOLS—Discounts are now 60 and 5 per cent.

AXE HANDLES—Quoted as follows:

Axe handles, turned, s.g. hickory, doz			$3 15
No. 1	1 90	No. 2	1 60
Octagon extra	2 30	No. 1	1 60

AXES—Prices quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz	9 00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

BUTTS—The discount on wrought iron butts is 70 per cent.

CHURNS—The discounts from list prices are 45 and 5 per cent.

CHISELS—Quoted at 70 per cent. off list prices.

AUGER BITS—The discount has been increased to 70 per cent. off list.

BLOCKS—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

FITTINGS—Discounts continue as follows:

Wrought couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	55 p.c.

GRINDSTONES—The price is now 1 3-4c. per lb.

FORK HANDLES—The discount is 40 per cent. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 per cent. off list prices.

HOOKS—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " per doz	1.70

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 per cent.

WASHERS—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

WRINGERS—Prices are as follows:

Royal Canadian, per doz	$30.00
R. B., per doz	34.75

FILES—Discounts are quoted as follows:

" Arcade "	75 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

BUILDING PAPER—Prices are as follows:

Plain.		Tarred.	
Joliette	40c.	Joliette	65c.
Cyclone	55c.	Cyclone	80c.
Anchor	55c.	Anchor	65c.
Pure fibre	60c.	Pure fibre	80c.

TINWARE, ETC.—Quoted as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, Famous	50 p.c.
" Imperial	50 and 10 p.c.
" " (one coat)	60 p.c.
" Premier	50 p.c.
" Colonial	50 and 10 p.c.
" Royal	60 p.c.
" Victoria	45 p.c.
" White	45 p.c.
" Diamond	50 p.c.
" Granite	60 p.c.

CORDAGE—Quotations are as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25
Cotton rope, per lb	00 21

SOLDER—Quotations now at 24c. per lb. with concessions for large quantities.

VISES—Prices are quoted as follows:

" Peter Wright," 30 to 34	14½c. per lb.
" " 35 to 39	14c. "
" " 40 and larger	13½c. "

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNTION, ETC.—We quote:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	20 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.

Loaded shells:

Dominion Eley's and Kynoch's soft, 12 gauge.	
black	16 50
chilled, 12 gauge	17 50
soft, 10 gauge	19 50
chilled, 10 gauge	20 50
Shot, Ordinary, per 100 lb	7 00
Chilled	7 50
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

IRON AND STEEL—We quote:

Bar iron (basis)	2 70
Swedish iron (basis)	4 75
Sleigh shoe steel	2 75
Spring steel	3 25
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

SHEET ZINC—The price is now $8.50 for cask lots, and $9.00 for broken lots.

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

MUNRO WIRE WORKS, Limited

NEW GLASGOW, N.S., AND WINNIPEG, MAN.

PAINT SPECIALTIES

Are money makers and should not be overlooked when stocking up. We carry a large assortment in neat and attractive tins.

90 to 100 "	

The farmer wants that new set of harness with which to start off the Spring work. Sell it to him.

British Columbia Trade News

"In 1910
Vancouver then
Will have 100,000 men."

This is the slogan of the new "100,000 Club," organized this week to bring the population of the Terminal City up to the hundred thousand mark in the present five years. It means doubling the present population, a feat not impossible, in view of the rapid growth of recent years, and indications of future development, not only locally, but in the big Canadian Northwest provinces, where the new settler comes in like the cloud of locusts into the fat lands of Egypt.

If lumber demands from the Northwest are any indication the boom in the prairie provinces is something almost without precedent in the big west, the land of big booms. Every mill on the Pacific Coast has its full cutting capacity taken up for weeks and months ahead with orders, and all are getting ready to cut night and day. The mills of the Mountain section of the province are experiencing the same kind of lively business and still the orders keep rolling in. One lumber broker this week turned down orders for 60 cars, all ordered on straight list prices, because he could not get a mill to take them. Many mills are only accepting orders for delivery after July 1, and practically all the dealers in the Northwest are unable to get half the quantity they require for immediate demands. The conservative estimates of the influx of new population into the two new provinces, Saskatchewan and Alberta, fix the figure at 250,000 people for the present season, and thousands of these are there already, early as the season is for beginning operations. Many of these people were in the country last year deciding on locations, and they either bought or homesteaded land, and have now returned with families and possessions. The first thing they want is lumber to build houses and buildings with, before the active farming operations begin next month. Every line of railway in the Northwest is crowded with trains of settlers' effects, and this demand alone has been quite a factor in causing shortage of cars. Early as it is in the season, the railway companies here are pressed with orders for cars, and not a moment's grace is allowed for unloading when car reaches Vancouver or any other coast point. They are all wanted for the lumber trade and as soon as merchandise is out of them they are spotted on the many mill sidings and filled with lumber to rush back to the prairie.

* * *

The prospect is that immediate developments may be looked for in the way of new mills. Several are already projected, and so favorable is the outlook for a continuation indefinitely of the big demand that it is certain large capital will shortly be invested in entirely new lumber mills. The present capacity of all the mills of the province if doubled could not any more than take care comfortably of the possible trade now offering. The big railway construction to be undertaken in pushing the new transcontinental line, the Grand Trunk Pacific, is a factor too, in the lumber trade, which will for several years mean a great deal to the lumber industry in B. C.

Another new mill is to be erected at New Westminster on the Fraser River, close to the old Ross-McLaren mill now owned and operated by L. W. David. A block of water frontage on the Fraser River, close to Mr. David's mill has recently been purchased at the low figure of $75 per acre, for a site. As both C.P.R. and G.N.R. railways run past the property and the mighty Fraser runs in front of it, the situation is ideal for a splendid export mill. Deep water vessels can be towed right to the frontage, and the fact that the teredos do not operate in fresh water makes it possible to store logs there indefinitely, which is impossible in salt water on this coast. The improvement of the Fraser River Channel to the sea makes it easy to tow sailing ships in, the Fraser River sawmill having already loaded two vessels at their mill, no lightering being necessary. The towage and other harbor dues, such as pilotage, are no more, or very little more, than on Burrard Inlet.

* * *

In all sections of interior B. C. similar activity in exploiting new enterprises exists, as now on the coast. In the Crow's Nest Pass section of Southeast Kootenay, John R. Booth, the veteran lumberman of the Ottawa River, has had well-known timber experts cruising every available area, and no doubt he will soon formulate some active campaign.

The Fernie Lumber Co. has undergone some changes in the personel of the owning stockholders. L. M. Proctor's half interest has been purchased by Americans, the consideration being $37,000. The buyer is James M. W. Hall, of Boston, president of the Machias Lumber Co., of Machias, Maine. Mr. Hall accompanied by his son, H. B. Hall, and his nephew, M. A. Hall, and A. R. Ames, also of Machias, Maine, made a personal visit to the country and concluded the purchase. It is stated that they are also negotiating for the other half interest in the concern, now owned by J. McDougall.

The big limits surrounding Violin Lake, near Rossland, have also been acquired by Americans. Messrs. Ealey, Yonkey and Smith, Michigan lumbermen, have bought the timber, the former owners being G. M. Annable and associates, of Moose Jaw, Saskatchewan, who have held them two years, cleaning up a big sum in the advance. The new owners will build a big mill at Trail, the C.P.R. smelter town.

On the eastern slope of the Rockies, away to the northern limit of the province of B. C., Edmonton people, associated with American capital, are preparing to exploit timber, bringing it down the Upper Saskatchewan to Edmonton.

Considerable activity is evinced in desirable business locations close to the harbor front in Vancouver at the present time, owing to what appears to be well-founded rumor to the effect that not only are the Great Northern people buying up terminal locations, but that other American lines are looking to Vancouver also. Notably the C. M. & St. Paul is mentioned as definitely being in the field, having secured options on large areas on both sides of the harbor.

Of course every loyal Vancouverite is sure that the G.T.P. will come to Burrard Inlet also, and never content itself by seeking a coast outlet to the north, thus passing by all the big trade and shipping interests centred here.

That there will be great developments in the Windy Arm country, close to White Horse, and within easy reach of the White Pass Railway, is the expectation here, since the news has been made public that Wm. Mackenzie and associates of Toronto have paid $5,000,000 for the properties owned by Col. Conrad. Nothing but development work and in some cases only prospecting has been done, but the outlook is that the new camp on the shores of the northern lake will be a big factor in mining on this coast.

At least 15,000 tons per month by May 15, is the estimate of production of the Britannia mines, Howe Sound, made by Geo. H. Robinson, the managing owner. The ore is shipped to the company's smelter on Vancouver Island, and is there fluxed with other ores from mines the company is working on Prince of Wales Island on the northern coast. Even the 15,000 ton mark is not the limit this local company has set for its objective point.

In the interior, Rossland mines are looking better than ever, the improvement in ore values in different deep levels of the Le Roi being one incentive to increased interest. In the Boundary, the Granby and other properties are being worked with heavy forces, the ore production and consequent smelter returns increasing every week. The Granby mines alone, last week shipped to the company's smelter at Grand Forks, 17,014 tons, the total for the Phoenix district being 24,108 tons for the week.

New Brunswick Trade News

St. John, April 2.

The incorporation of the company to manufacture Stratton's babbitt metal was noted in this column some time ago. Mr. Joseph Stratton, one of the promoters of the company, in an interview recently given to a Moncton newspaper, stated that the company's business is rapidly increasing. Large orders, he said, are being received daily from concerns doing business both in the Dominion and across the border. The company's shipments are increasing steadily and the staff of the foundry, which is situated in Moncton, will shortly be made larger.

Hardwaremen in St. John are not all immune from the western fever. The last to profess his intention to take up life in the west is George Hamm. Mr. Hamm has been in the employ of Messrs. Emerson & Fisher for some years, part of the time as city traveler. It is understood that he has accepted the offer of a position with a Winnipeg hardware house. At all events it has been announced that Mr. Hamm will leave for the west very shortly.

Another man who has yielded to the attractions of the west is G. F. Hawkhurst. Mr. Hawkhurst is a north end man who has done a good business as a carriage repairer, etc. He will leave St. John in a short time.

The Enterprise Foundry, of Sackville, continues to make progress. A few years ago its stoves were comparatively little known. To-day they are sold not only in the province but through the west as well. Some seventy-five or so men are employed at the works.

Harold V. Vaughan was quite seriously injured in Glace Bay, C.B., a short time ago. He fell, striking with a good deal of force on the hard roadway. The result was a slight attack of concussion of the brain. He will not be able to go on the road again for several weeks according to present reckoning.

There has been nothing especially worthy of note in connection with the hardware trade in the province of late. Firm prices continue to rule with no prospects of any decrease in the immediate future.

As indicating a degree of the Winter port business done here — though this may be aside from the strict scope of a hardware paper—it may be said that between November 21, 1905, and last Saturday the cargoes of 84 steamships have been filed at the Custom House. These vessels took away goods valued at $17,757,047. Included in the above are three sailings for South Africa. These boats carried away goods to the value of $987,606. There were 99 sailings during the whole of the season of 1904-5, with a total valuation of shipment of $13,706,877. The figures given for this year show that the shipments so far are $4,050,170 greater than those of last season.

lathing

If you are catering to the Building Trade you know that builders who have once used "Hayes" Metallic Lathing cannot be induced to use any other. Its grip upon the mortar is so tenacious that it takes but half the quantity required by wood or cheap metal lathing, makes partitions much narrower and has a lightness, rigidity and freedom from "buckling" found in no other make of metal lathing. It's fireproof, ratproof and sanitary. No live builder should overlook the superiority of "Hayes" Metallic Lathing.

OUR NEW $10,000 CATALOGUE

We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipuation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

HARDWARE SHELF BOXES.

The Bennett Patent Shelf Box, which is well known to a great many hardware dealers in Canada, scores of merchants having installed the Bennett system, is now being manufactured in Toronto.

The box has a metal body and wood at front and back. The metal sides make a stronger box and save at least 20 per cent. shelf room. It will not shrink or crack like a wooden drawer. It is very firmly put together. The metal is embedded in the wood by a patented process and secured by steel brads driven from the inside through wood and metal, thus making a box that has no nails or roughness to tear the hands or shelving and so strong as to be practically unbreakable. The cost of fitting up a store with these metal boxes and drawers is much less than if all wood were used.

Another feature of the box is the

price card on the side. This is fitted in a depression and so cannot get dirty or defaced.

A neat little folder has been issued by the company giving full information as to price and different finishes in which the box is made. Address all enquiries to Bennett Metal Shelf Box Co., 85 Richmond street west, Toronto.

THE AUTOMOBILE SHOW.

The Automobile Show which has been open in Toronto during the present week marks an important event in mechanical progress in Canada, the Canadian cars on exhibition standing favorable comparison with imported American and European cars. There were 60 different models on exhibition, representing 21 different makes—Canadian, American and foreign—besides the exhibits of 33 motor boat, marine engine and accessory manufacturers and dealers. Of these exhibitors three are well known to the hardware trade, the Canada Cycle and Motor Company, Toronto Junction, manufacturers of the "Russell" automobile, bicycles and skates; S. F. Bowser & Co., Toronto, manufacturers of the Bowser self-measuring oil tanks; and John Millen & Sons, Montreal and Toronto, dealers in all kinds of automobile supplies and sporting goods.

To hardware dealers who have their eyes on the possible development of a trade in automobile accessories the motor show was most interesting.

Another motor show is to be held in the Mutual Rink, Toronto, next week, and in Montreal the week after.

FOUNDRY AND METAL INDUSTRIES

J. H. Fryer and others, of Galt, will go into the manufacture of malleable iron castings. They will be capitalized at $100,000.

The mica mines in Hastings county are being successfully operated, and a large quantity of mica is being marketed from them.

Crowe's Iron Foundry, Guelph, suffered a $20,000 fire loss on the 22nd. The varnish and paint department was completely destroyed.

A heavy output of ore is maintained over the whole Kootenay district. The total shipments for the last 12 months were 338,228 tons.

William Mackenzie has purchased for $5,000,000 the Conrad mines in British Columbia. These mines were bought last year for $160,000.

The annual report of the U. S. Steel Corporation, for 1905, just published, shows a gross earning of $585,000,000, and a net earning of $120,000,000.

The Charlottetown Foundry & Machine Co., of Charlottetown, P.E.I., have opened up their new foundry, and make a specialty of heating plants.

The Britannia mine's working force is being increased, and in a short time the copper output will be trebled. The present output is about 7,000 pounds per month.

The Burrill Foundry Company has secured a site in Brantford, and will build a factory thereon. It is expected that everything will be running by the 1st of June.

The Dominion Smelter at Boundary Falls, B.C., will be enlarged by the addition of a new furnace and an expenditure of $20,000 on machinery, which will increase the output to 1,200 tons per day.

The Arizona Camp Bay Co. will install a 125 ton capacity pulverizor in their mills at Kenora. It is claimed that a saving of 50 per cent. will be effected with half the former power used.

Recent explorations in Cape Breton have brought out the reports that some of the richest copper properties in the world have been found there. The Department of Mines has taken up the work of surveying.

Wm. Beech has returned to Winnipeg, after spending several months of exploration up near the Hudson Bay. He reports sections of that country to be rich in iron, mica and plumbago, as well as the precious metals.

Chas. Harrigan, acting for a Spokane syndicate, has taken an eighteen months' bond on the Humming Bird gold-copper property in British Columbia. A force of men will be put on at once to develop this property.

The Grand Trunk has asked the Government to permit 50,000 tons of steel rails to enter Canada free of duty. It is said that the rail mills of Canada have all they can do for twelve months, and are unable to fill this order.

The Pacific Coal Co., of Bankhead, Alta., are putting up a briquetting plant to handle the coal dust which at present goes to waste. Experiments have proved so successful that they feel warranted in putting in an $85,000 plant.

It is said in some railway circles that the steel ties will soon be extensively used. They cost about $2 to install, and need no further attention, as against from 30 to 90c. for wood ties, which must be frequently renewed.

Henry M. Whitney, of Boston; Horace Mayhew and Herbert Gladstone, son of the late W. E. Gladstone, are at the head of a company which purposes operating some large coal fields in Nova Scotia. They hold valuable options on coal lands.

The Canada Stove Works at Harriston are getting things in shape at their new foundry. The molding shops, machine shops and fitting room contain the latest improvements, and when completed it will be altogether a well equipped plant.

J. M. Moore, of Portland, Ore., is at the head of a body of men who purpose establishing a cyanide system of treating ores, in Victoria, B.C. The advantage of this process is that ores are treated at the mines instead of being sent to smelters.

J. A. Young, of Sydney, C.B., states that a barbed wire factory will be established at Sydney if the Dominion Government will put a tariff on barbed wire. The new enterprise would be financed by English capital and employ a large number of men.

The ironfounders of Hamilton have asked the molders to accept 10 per cent. cut in wages. The employers say that the west, which is the principal market, is being taken by American founders, who are near the market. The molders turned down the proposal, and asked for a 10 per cent. increase.

The Cockerill Zinc Co., of Missouri, and others, have filed a protest with the United States Board of General Appraisers against the American import duty on zinc coming from Canada and Mexico. If this duty is removed it will mean a great deal for British Columbia zinc miners, who formerly sold their output on the American market.

DEATH OF A VETERAN HARDWAREMAN.

In the death of F. X. Rastoul, who passed away last Saturday, the Montreal hardware trade has lost one of its veterans. The deceased, who was especially known for his upright character and charitable disposition, was born at St. Eustache, in 1830, and was for over fifty years connected with the hardware business. He was seigneur of St. Benoit, Two Mountains, and left a considerable fortune, the greater part of which was invested in real estate. A widow and two stepsons survive.

The funeral took place from his late residence, 554 St. Denis street, to Notre Dame Church, thence to Cote des Neiges Cemetery, and many prominent hardwaremen attended the service.

PAINT, OIL AND BRUSH TRADES

METHODS OF WHITE LEAD MANUFACTURE.

In a recent article by United States Consul McNally, of Liege, Belgium, who investigated the various methods of white lead manufacture used in Europe, he states that the English system of recent invention is about to replace the Dutch, which has been in use in the United Kingdom for some time. The writer says :

The systems in vogue in Europe are styled the French, Dutch, and English. A short description of the three methods should prove of interest.

The Clichy, or French, method consists in dissolving litharge, or oxide of molten lead, in a large vessel (equipped with a mixer) in acetic acid. The litharge is transformed into saturne, or acetate of basic lead, which runs into a reservoir containing a deposit of nonsoluble matter. The solution of pure basic acetate passes again into a second reservoir, which, by a special arrangement, is brought into contact with a current of carbonic acid. Under the action of this gas the basic acetate dissolves into white lead (ceruse). The neuter acetate, which rises to the surface, is then drained off and returned to the large vessel for a second operation. The white lead deposit is gathered, washed, and dried, and is ready for the market.

The Dutch method employs the properties which the metallic lead contains to transform into lead carbonate, when, at a suitable temperature, it comes in contact with carbonic acid, oxygen, and vinegar vapors. At the bottom of a large vessel is deposited a mixture of vinegar and beer yeast, and hanging above, without coming into actual contact, are thin sheets of metallic lead rolled into spiral form. The vessel is closed with a lead plate covering and deposited in or surrounded with manure. The temperature thus acquired volatilizes the vinegar, which, aided by the oxygen, transforms the lead into a basic acetate. This, under the action of manure fermentation, decomposes into neuter acetate and white lead, which is separated as in the French method, above mentioned.

The English Method.

The English method about to be introduced puts the ground litharge into contact with a solution of oxide of lead and glycerine. This solution receives a current of carbonic acid and is then returned in a filter and the white lead separated. The deposit is washed and dried, while the solution is returned to the vessel for further use. It is said that the addition of glycerine has as its aim to delay the process and thereby produce a very pure and white article.

The Germans use the Dutch method with a slight modification. Instead of using the large vessel they substitute rooms specially built; on the floors of which is a solution of vinegar. The lead, in thin sheets, is hung over the deposit, which, under the influence of the vinegar vapor, water vapor, and carbonic acid, which is forced in, the white lead is produced.

An apparatus of recent invention regulates the introduction of the water vapor and carbonic acid into the rooms. The product under the Dutch and German methods is more opaque and covers more surface than that obtained under the French process. On the other hand, the latter combines better with the oils and enhances the colors. By the use of a very pure carbonic acid, the French have lately succeeded in obtaining a product almost identical with the Dutch article. For some time past this article has also been produced by electricity.

The annual production in England amounts to 17,000 tons, France the same, Italy about 4,000 tons, and the United States about 30,000 tons.

AUSTRALIAN WONDERS IN PAINT PRODUCTION.

In the course of the recent tariff investigation in Australia, it was stated by a prominent merchant that South Australia could supply the whole of the Commonwealth market for paints, if sufficiently protected. The present duty of 5 per cent., he said, should be advanced to 40 per cent. South Australian paints, he added, had taken a gold medal in London. The paint material deposits (all iron colors) are said to contain thirteen leading shades. An apparently inexhaustible lode, twenty feet wide, is at Blumberg, only thirty miles distant from Adelaide. United States exports of paints to Australia during the fiscal year 1904 were $191,888, being the largest trade in that branch with any country excepting Canada and England.

DID NOT BUY CARTER COMPANY.

An authoritative denial is made by officials of the National Lead Company of the report sent out from Omaha that this corporation has purchased the Carter White Lead Company, which has plants at Omaha, Chicago and Montreal. It is said the only basis for the report is the fact that President E. J. Cornish of the Carter Co., when in New York not long ago, made an offer to sell the property, the price he put upon it being about $4,000,000. However, the management of the National Lead Co. considered the figure excessive, and nothing further was done concerning the matter. No negotiations are in progress at present.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 6, 1906.

Linseed oil and turpentine, the two lines which fluctuate frequently in the paint and oil markets, have shown no change in price since last week. With the advance of warm weather, however, the new crop of turpentine is coming forward and with free supplies the market may be reported as somewhat easier.

The situation in Paris green is still very acute. The season's make was all sold early and the keen advance which has taken place owing to the scarcity of chemicals has checked sorting up sales. Several round orders were offered to the makers of Paris green this last week at old prices, but they could not be accepted unless at an advance of 3c. per lb., even this barely covering the enhanced price now asked for arsenic and other essential chemicals.

LINSEED OIL—We quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c., f.o.b. Montreal, net 30 days.

TURPENTINE—Prices are still firmly held at the following figures: Single barrel, 98c. per gallon; two barrels or over, 97c.; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

GROUND WHITE LEAD—We give prices as follows: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC—A drop in foreign markets has not effected the Canadian dealers. Prices here are still quoted as follows: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil)— We quote: Pure, 8c. to 9c.; No. 1, 6 1-2c. to 7 1-2c.; No. 2, 5 1-4c. to 6 1-4c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

RED LEAD—Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6.00; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC—We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH—We quote: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is firm at following prices: Firsts in cases 8 1-2c., is barrels 8c.; seconds, in cases 8c., in barrels, 7 1-2c.

REFINED PETROLEUM—We quote as follows: American water white, 17c.; Canadian prime white, 15 1-2c.; astral, 20c., ex warehouse.

PARIS GREEN—New prices have not yet been issued and meanwhile quotations can only be obtained from the dealers direct.

WINDOW GLASS—From all appearances, trade this year will be very brisk. There has been exceptional demand for window glass, as shown by the heavy import orders, and although the market at present is quiet, due to the fact that dealers are awaiting importations, a record turnover this year is assured. We still quote: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4.00; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5.00; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8.00, and seventh do., $9.00. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00; and twelfth do., $28.50.

—

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 6, 1906.

There is an upward tendency in linseed oil on English market, but here, although prices are firm, there are no indications of any change. The year's demand cannot yet be gauged and until a more definite idea is known of the volume required, prices will no doubt remain steady.

Turpentine seems to have been a little easier this week locally, but reports from the south would hardly seem to justify this. The forecast of the new crop shows that it will be lighter, if anything, than the previous one, and in addition to this, negro labor is scarce and difficulty is found in getting a substitute.

"I ALWAYS USE THAT KIND"

Intelligent consumers demand good Paint. Wide-awake dealers will meet this demand.

"ARK BRAND" PAINT

is the best Paint you can sell; any dealer who handles it finds his trade constantly increasing. It is more economical because it gives better satisfaction and wears longer.

Paint troubles disappear when you sell **ARK BRAND,** for every point of excellence is fully attained wherever used.

Sell **"ARK BRAND" Paint**—Canada's Best.

MURESCO is the wall finish you ought to sell. It is the best in the world. 14 million pounds sold last year.

THE FRANCIS-FROST CO. LIMITED
TORONTO, ONT.

Canadian Distributing Agents for Grippin's Crack Filler and "Muresco" Wall Finish

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

BERRY BROTHERS, Limited

VARNISH MANUFACTURERS

WALKERVILLE, ONT.

Write for our 100 page illustrated catalogue. Every dealer should have a copy for reference.

SPECIAL

We take pleasure in introducing to you our new

"VERONICA" GREEN

This Green is made solely by ourselves, from the essential chemicals in our own Color Works in Montreal.

The

"VERONICA"

is a soft rich green of great covering power. It is very durable and manufactured especially for Window Blinds, Shutters, Verandahs, Screen Doors, Engines, Agricultural Implements and all kinds of wood and metal work, and for all purposes where a green paint is indicated.

The

"VERONICA" GREEN

is manufactured only by THE CANADA PAINT COMPANY, LIMITED, of Montreal, Toronto and Winnipeg.

"VERONICA"

is Copyrighted as a Trade Mark with the Department at Ottawa, Canada.

The

"VERONICA" GREEN

is made in four shades, viz.:—Light, Middle, Deep and Extra Deep. Insist upon the

"VERONICA"

as the undoubted superiority of this Green will probably lead to disappointing imitations.

For prices follow the prices of EVERGREEN in our 1906 Catalogue.

The

"VERONICA"

is put up as follows :—

In Dry Form, 6-lb. and 10-lb. Tins, 100-lb. Kegs and 600-lb. Barrels.

In Paste Form, 1-lb., 2-lb. and 5-lb. Tins, 12½-lb. and 25-lb. Irons.

THE CANADA PAINT COMPANY Limited

White lead continues scarce, in fact, cases are reported where it has been found impossible to obtain even the smallest amount. Unless conditions change, and there seems to be no visible reason for a change this year, it is possible that still further advances may obtain later on.

There is little buying done in Paris green. People appear to be waiting for a decline. The result, however, would seem to be that when they really must have it, the demand will be heavy. This, coupled with the scarcity of the ingredients contained in it, would, if anything, tend to firmer prices.

In mixed paints and accessories the Spring trade is opening up well, the sales increasing as the weather becomes warmer.

WHITE LEAD—Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 560 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1, in casks of 500 lbs., $5.50, ditto. in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c., in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c., in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1.00 per 100 pounds.

WHITING—60c. to 65c. per 100 lbs., Gilders' whiting, 75c.

PARIS GREEN—Prices have been withdrawn owing to recent advances.

SHELLAC VARNISH—Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 56c.; 5 to 9 barrels, 55s.; boiled, 1 to 4 barrels, 59c.; 5 to 9 barrels, 58c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrel lots, $1 to $1.05 f.o.b. point of shipment, net 30 days. For less quantities than barrels, $1.10 per gallon will be charged.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels $1.80; pure linseed oil, $2.00 to $2.10; bulk in 800-lb. casks, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.00.

CASTOR OIL—English, in cases, 8 1-2c. to 9c. per lb., and 10c. for single tins.

REFINED PETROLEUM — Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

ALLEGED DAMAGE TO BRUSHES.

In England, where a number of substitutes for turpentine have come into common use, some of them being of very doubtful character, there is considerable complaint that certain of these mixtures work injury to brushes. The manufacturers of the better class of turpentine substitutes, i.e., pure wood spirits, contend that their product is quite harmless, and the complaints seem to have arisen rather from the chemical compositions and especially the creosote preparations. A correspondent of the Oil and Colorman's Journal says that three kinds of cement can be used for the mere fixing of brushes, viz. : (1) one made from glue ; or (2) one with a resinous basis ; or (3) one combining both. Glue is insoluble in oil, methylated spirits, turpentine, benzol, and so on ; in fact, in any of the pure substances which can be used as ingredients of turpentine substitutes. If these act on the cement or on the hair, then it is in virtue of some impurity in the ingredients, say, acetic acid or creosote, or else the cement is of a resinous nature.

Everyone knows the penetrating nature of Stockholm tar, and how it dissolves dried coatings of linseed oil substitutes as easily almost as hot water dissolves sugar. This it does in virtue of the solvent action of the creosote and wood and tar acids it generally contains. Now crude Russian turps is closely allied to Stockholm tar, and if this creosote be not removed from Russian turpentine, it is very possible such Russian turpentine, or substitutes containing it, may attack the cement, more especially if of a resinous basis, and very possibly it may attack even glue itself.

All turpentine substitutes should be rejected which cede tarry matter to caustic soda ; that such turpentines are more or less colorless is no guarantee of purity or freedom from injurious tarry resinous ingredients, or even from creosote. Again, if caustic soda be used in refining turpentine, and not washed perfectly free from it, it is just possible that the caustic soda left in it may eventually attack the cement or even the hairs themselves.

POWER FROM REVERSIBLE FALLS.

Josiah Fowler, proprietor of the well known axe works which bear his name at St. John, N.B., is much interested in the development of the splendid power facilities of the famous Reversible Falls of the St. John River. Mr. Fowler during a recent trip through the west consulted several engineers with reference to the project, and all seemed impressed with the possibility of the scheme. The idea is that by contracting the gorge and erecting large paddle wheels over the stream great power could be developed. The paddle wheels would be so constructed that the falling water of this remarkable reversible cataract could be utilized to best advantage at all times.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Peterborough Shovels.

Thirty-seven different styles of shovels, scoops and spades are shown in the catalogue of the Peterborough Shovel & Tool Co. as well as some garden trowels, etc. Their entire plant is new throughout and equipped with the latest machinery for the manufacture of these lines, which with their trim appearance and substantial construction, are sure to hold the reputation they have already won.

Dana's Freezer Book.

The new plant of the Dana Manufacturing Company, of Cincinnati, makers of the Peerless Iceland Freezer and Dana Mop Wringers, is described and illustrated in a series of pictures in a neat little booklet being supplied the trade by this company. The cover design of the pamphlet shows a bird's-eye view of the

RETURNED
APR 13 1906

Dana Mfg. Co.'s New Plant at Cincinnati.

buildings and the beautiful architecture of the massive entrance way which gives an idea of the substantial character of the new buildings. They are built to stay and are as nearly absolutely fireproof as modern ingenuity could make them. Prompt delivery of all orders is assured. The working conditions have been made as pleasant as possible, to secure the best efforts of the men. Every Dana employe has his own locker for a change of clothes. On arriving at the factory the workman enters a spacious room down the centre of which are washstands of spotless neatness. It is the duty of one man to keep this locker room immaculate. All the buildings are one storey high and constructed of substantial concrete, the lighting being perfect, making certain the detection of any flaw in the material or workmanship before the factory products go to the shipping room. Send for a copy of the booklet.

Concrete Block Machines.

Concrete blocks will be used extensively this year, and it is not a bad idea for the hardwareman to get a line on a good machine for making them. The James Stewart Mfg. Co., of Woodstock, are showing the Dunn machine in their catalogue, which will be sent to those who ask for it.

Either Way You Look At It

From the standpoint of either *safety* or *accuracy*, no better weapon for defence or attack can be had than the Iver Johnson Revolver. No safety mechanism could be more simple and perfect—a device that *means safety*, without any "ifs" or "buts" about it. The

IVER JOHNSON REVOLVERS

need not be handled carefully; with chambers fully loaded, drop it on the floor, *hammer the hammer*—it can't possibly go off unless you deliberately pull the trigger.

Iver Johnson Revolvers are for sale at all dealers.

Hammer, $6.50 Hammerless, $7.50

Write for our bright little booklet, "Shots" and complete catalogue, *free*.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Stevens, Hepner & Co., of Port and door factory at Port Arthur.

J. Burnside, of Hamilton, will start a sash and door factory at Lethbridge.

A local syndicate of Eburne, B.C., will erect a glass works at that place.

The Crown Broom Works of Vancouver will build a new factory in that city.

The Cockshutt Plow Co., of Brantford, will make extensive additions to their plant.

The Chatham Fruit Growers' Association will erect a factory and warehouse at that place.

C. S. Battle, and others, of Vancouver, will erect a big lumber mill on Burrard Inlet, B.C.

Sault Ste. Marie will submit a by-law to guarantee bonds of a plough company to the extent of $15,000.

James Sanders will erect a grist mill at Esterhazy, Sask., the town having granted him a bonus of $3,000.

The Dexter Mill Co., of Marysville, Washington, are contemplating establishing a shingle mill in Vancouver.

A Michigan syndicate has purchased 17 acres of timber land from W. H. Higgins, Eburne, B.C., for a saw mill site.

The Coast Quarries Co., operating at Burrard Inlet, B.C., is making application to use the Granite Falls for power purposes.

Campbellford, Ont., will submit a by-law to raise $75,000 to erect a new dam and power house, to develop 9,000 horse-power.

The Robertson Machinery Co., of Welland, are about to erect a large new building to accommodate their increasing business.

Stephens, Hepner & Co., of Port Elgin, are negotiating with Peterboro' with a view to establishing there. They employ 60 hands.

Waterloo will vote on a by-law to lend $7,500 to the Specialty Knitting Co., of Galt, in order to establish a factory in the former town.

An order to wind up the Oshawa Heat, Light and Power Co. has been granted on application of the Equitable Gas Co., a creditor for $1,973.

The Terminal Warehouse & Cartage Co., Montreal, will erect a building to cost $137,000. The building will be of solid brick, 192 x 99 feet.

The oil refinery of the Imperial Oil Company, which was recently destroyed at Sarnia, will be rebuilt at once with increased manufacturing facilities.

Seaman, Kent & Co., Toronto, will establish a factory at Port Arthur to employ from 30 to 50 hands for the manufacture of hardwood flooring.

Meaford citizens voted a loan to the Georgian Bay Milling and Power Company in order to develop electrical power for lighting and industrial purposes.

The Peterborough Light & Power Co. has offered to furnish Peterborough factories with power up to 2,000 horsepower at the rate of $20.00 per horsepower per year.

The establishing of a fibre factory is contemplated in New Westminster, B.C. The promoters of the concern are the John Doull Miller Company of New York.

The Port Arthur Lime, Sand, Brick Co are having a plant shipped from John Inglis & Sons, and it is expected that operations will be commenced on June 15.

Stevens, Hepner & Co., brush and broom manufacturers, of Port Elgin, have asked the town to install a waterworks system, otherwise they will go elsewhere.

The Knechtel people, of Walkerton, will enlarge the Sieling furniture factory to accommodate 25 more hands. The addition will be 50 x 75 feet, three stories high.

The Hedley Shaw Milling Company of Thorold, Ont., may locate at Port Colborne if certain trackage and switching privileges are not allowed them by the former town.

The United States Government will shortly commence the widening of the Soo Canal, which will be the first step in improvements that will amount to over $6,000,000.

Final arrangements have been made for building the Hamilton, Galt and Guelph electric railway. A bridge on the high level across Desjardins Canal will be constructed.

O. Dunn, of Peterborough, and Edward Young, of Young's Point, will rebuild and operate the sawmill burnt at the latter point last July. The new mill will be 60 x 22 feet.

Assessment Commissioner Forman, of Toronto, is negotiating with a large American steel company, and a brick manufacturing company, to establish works at Ashbridge's Bay.

The Sackville Mfg. Co., which was recently incorporated to manufacture harness, boots and shoes, will at once commence work at Sackville, N. B. J. E. Fowler will be manager.

The London Show Case Works, of London, will be incorporated as the Dominion Office & Store Fittings Co., capital $40,000, and will erect a new factory just without the city limits.

The Keewatin Power Company will offer for sale by auction its developed water power on Winnipeg River, near Kenora, Ont. Sale will take place at Russell House, Ottawa, July 5, 1906.

The Baker Lumber Company will build a saw mill on the Kootenay river near the mouth of the Elk river in British Columbia. C. D. McNab will be manager, with headquarters at Cranbrook.

The Ingersoll Board of Trade is advertising the industrial possibilities of their town in trade papers, and report many replies, which shows that this method of advertising reaches the persons desired.

Toronto city council has joined in a petition to the Dominion Government to permit municipalities to obtain control of Bell Telephone lines. The petition also memorializes the Government not to increase the capital of the Bell Company unless the company is willing to submit to municipal regulation and provincial control.

S. J. Ritchie, an Ohio capitalist, has made the statement that immense quantities of red, grey and blue granite are to be found near Bancroft, Ont. The deposits were brought to the attention of Thos. Morrison, of Aberdeen, Scotland, who has had a large experience with granite and marble, and he has declared the granite equal to the best imported to this country.

BUILDING NOTES.

Oakville, Man., will have a new schoolhouse.

James Wilson will erect a brick hotel at Stratford.

Mayor Clavet, of Port Arthur, will build a residence.

A new school-house will be built at Winnipeg Beach, Man.

Campbellford, Ont., Methodists will build a $20,000 church.

T. A. Wilson, of Cannington, will erect a business block there.

The Imperial Oil Company will build a business block at Sarnia.

The Y.M.C.A. of Woodstock contemplate erecting a new building.

It is announced that the C.P.R. will build a large hotel in Regina.

The Sawyer-Massey Company will erect a warehouse in Hamilton.

The Telfer Mfg. Co. will build a three-story factory building in Toronto.

W. H. Biggar will erect a residence on Pine Ave., Montreal, to cost $12,000.

The Great Northern Railway Co. will erect a new station building at Montreal.

E. Guenther, architect, is preparing plans for another $35,000 hotel for Vancouver.

Considine & Sullivan will build a $60,000 theatre in Vancouver. It will seat 1,600 people, and will be ready for next season.

SIDE LINES

TRAVELLERS calling on hardware trade, who are willing to take up a good side line which has been well advertised, and which is already well and favorably known by the trade, should write at once for full information; the article is patented, each sale means a good sized order on which a liberal commission will be paid; hundreds of these articles have been sold in Canada. Box 512, HARDWARE AND METAL, Toronto. (tf)

TRAVELER WANTED.

WANTED—A traveler for Western Ontario to sell paint; a bright hardware clerk preferred, one who has confidence in his ability to sell goods. Apply, with references, to Box 98, HARDWARE AND METAL, Toronto.

TRADE ENQUIRY.

A UNITED STATES firm would like to get in communication with a Canadian firm who would undertake to manufacture their Franklin woven wire stretcher in Canada. Address Box 516, HARDWARE AND METAL, Toronto. [15]

FOR SALE.

GOOD hardware, paint, wall-paper and stove business for sale; situated on St. Catherine Street, Montreal, with good advantageous lease; stock clean and up-to-date; golden opportunity for some person desiring to enter this branch of trade; best of references given; present owner going into the mining business. Apply Box 1, HARDWARE AND METAL, Montreal. [tf

PLUMBING AND STEAMFITTING

THE PLUMBING OF A COTTAGE

Copyrighted, 1905, by Ernest C. Moses. All rights reserved.

ARTICLE III. (Continued.)

THE HOUSE DRAIN.

The house drain may be defined as that part of the main horizontal drain and its branches, inside of the walls of the building, extending to and connecting with the house sewer. It should be the same size as the house sewer, rather than an inch or two less in diameter, as is very frequently the case.

House drains should be constructed of cast iron pipe and of the grade known as "extra heavy" in preference to "standard" pipe. When the house drain is located above the cellar floor, wrought iron pipe, equal in quality to "standard," galvanized both inside and out, and special galvanized cast iron recessed drainage fittings, may be used. Earthenware pipe should never be used inside of the main trap.

When the house drain is located above the cellar floor, every length of pipe and every fitting for a vertical line should be properly supported near the hubs. When the piping runs close to the cellar floor, it may be supported on eight-inch brick piers as at (A) or on iron pipe uprights as at (B), Figure 16. When the piping runs nearer the cellar ceiling than to the floor, it should be suspended from the floor beams by means of iron pipe hangers, as in Figure 17. Common pipe hooks should not be used, as they cannot be depended upon to bear the weight imposed upon them, which, even in the case of a small cottage, is considerable. Improper supports will sooner or later cause a sagging of the house drain, which, no matter how slight, will rupture the joint.

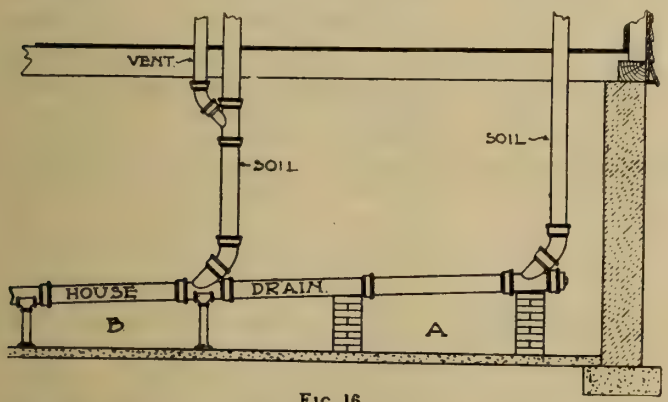

FIG. 16.

All connections to house drains should be made with Y fittings, (A), Figure 18. The connection of a vertical soil or waste line with the house drain should be made with a Y fitting and an eighth or sixteenth bend as in Figure 18. The use of short quarter bends for this connection is prohibited by most plumbing regulations.

Figure 19 illustrates the proper connection of a horizontal branch with the house drain. The use of the T fitting for this connection is prohibited in most cities and the use of the T Y fitting on horizontal drains should be discouraged.

Figure 20, at (A), illustrates the T fitting; at (B), the T Y fitting; and at (C), the short quarter bend.

The interior of the house drain and its branches should be made accessible at every point by means of clean-cut ferrules (Fig. 21), the body of which may be either extra heavy cast iron or extra heavy cast brass, preferably the latter, and the screw cap for which should be extra heavy brass, at least ¼-inch thick. The engaging parts should have not less than six threads of iron-pipe size. The screw cap should have a solid square or hexagonal nut, not less than one inch high and one and one-half inches in diameter, so as to afford a firm grip when it is necessary to remove the cap. Before the cap is screwed in place, the threads should be properly lubricated so that the screw cap may be easily removed when necessary.

Clean-out ferrules should be the full size of pipes, traps, or fittings into which they are calked, up to five inches in diameter, and should be at least five inches for larger pipes, traps or fittings.

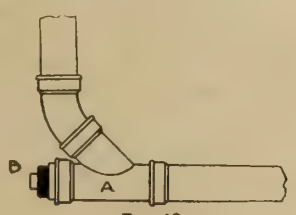

FIG. 18.

Clean-out ferrules should be located at the end of a horizontal line, where a vertical line enters (B, Fig. 18), at the end of the horizontal line, where a horizontal branch enters, or where there is an abrupt change in the direction of the house drain (Fig. 22), near the end of a horizontal line where an end clean-out ferrule cannot be used (B, Fig. 19), and at convenient points on long house drains or branches.

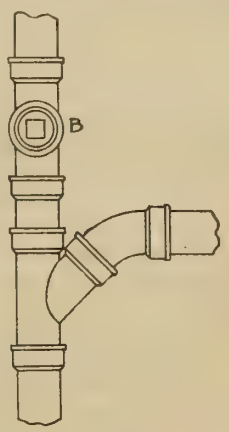

FIG. 19.

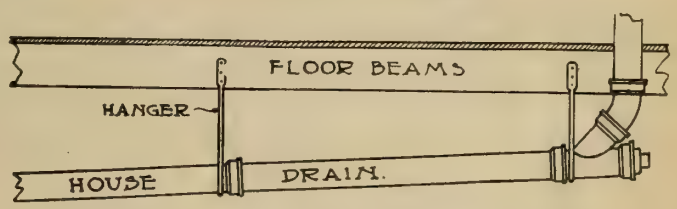

FIG. 17.

INDOOR RELATIVE HUMIDITY.

Dr. Henry Mitchell Smith, in a paper before the Brooklyn Medical Society, points out that the average relative humidity in a house heated by steam or hot water is much lower than the outdoor humidity. The indoor humidity in schools and public buildings is generally found to be an average of 25 per cent., whereas the outdoor humidity at the same period, while it varies with the geographical situation, is approximately 70 per cent. Passing from an atmosphere with relative humidity of about 25 per cent. into one of a relative humidity of 70 per cent. there is a sharp violent contrast which affects the delicate mucous membrane of the nose and throat, accounting in a large measure for the prevalence in cold climates of diseases of the nose and throat.

In dwellings a method is yet to be discovered which will provide adequate means of moistening the air, but in large buildings in connection with the fan system a satisfactory equipment has been developed.

The Canadian Buffalo Forge Company, Montreal, control the Canadian patents of a humidifier to be used in connection with the fan system. The equipment consists of a spray box through which the air is passed, and a dry box which removes the moisture carried mechanically but leaves the air saturated. To complete the equipment an automatic regulation of temperature in the spray

box determines the amount of moisture, as the amount of water which air can absorb depends entirely upon the temperature. During the Summer months if cold water is used in the sprays the air entering may be considerably reduced in temperature.

One of the great faults with mechanical ventilation has been the dust and dirt which enters through the ventilat-

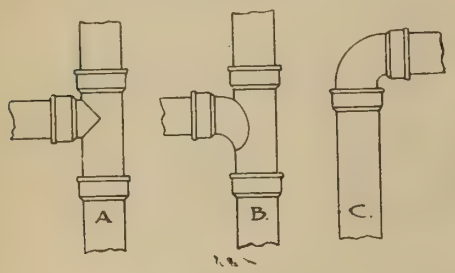

FIG 20.

ing ducts, and in passing through the sprays and dry box special attention has been paid to have the water used to remove not only the dust but also to carry off such gases as are readily soluble.

The air that enters a building after being thus treated is pure, moist and fresh. A published account of this system installed in St. Paul's Hospital at Montreal has stirred the muse of a Montreal paper to perpetrate the following :

I can stand for tainted money, I can stand for tainted grub,
I can drink polluted water and employ it when I scrub ;
But since noting this invention I shall never, I declare,
Be content again with breathing anything but laundered air.

Give me clothing filled with shoddy, filled with microbes, if you will ;
Let a million microbes bite me when I touch a dollar bill ;
Let the germs come swarming o'er me when I take an easy chair,
But I pray you do not give me anything but laundered air.

If ozone may be laundered, can't we neatly crease it, too—
Hand it round in snowy bundles like the laundry people do ?
Oh, I hope the time is coming when to laundries we'll repair
Bright and early Monday morning for our week's supply of air.

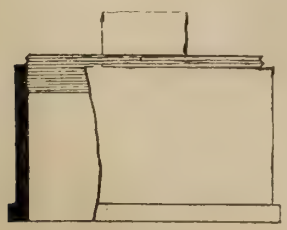

FIG. 21.

Carberry (Man.) ratepayers have authorized the erection of municipal lighting plant.

AN ELECTRIC SLEIGH.

This sleigh is propelled by eight pointed shoes on the rear truck with an action similar to those of a horse's hind legs. These shoes are shaped like a horse's hoofs, but are sharp enough to set into hard-frozen snow or ice. They work in sets of two, two shoes being always on the ground at one time, and readily follow uneven surfaces. Pointed steel stakes are used as brakes. The motor can be fitted with gasoline or petrol engines of any horse-power. It is a Boston man's invention.

ITEMS OF INTEREST.

The Winnipeg health department has been given power to force sewer and water connections on all houses on streets where there are mains.

Kingston will submit a by-law for $75,000 for the extension of its lighting plant.

Crosby Bros., of the Crosby Mills, Bonshaw, P.E.I., contemplate establishing a water power electric light system at Bonshaw.

Port Hope will apply for authority to issue $10,000 debentures to establish an electric light plant.

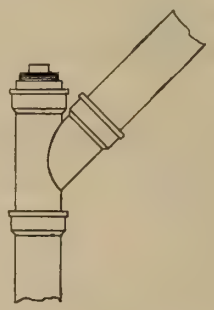

FIG. 22.

Wm. Birmingham, of Ottawa, has been awarded the contract for developing the 1,100 horse-power electric plant at Morrisburg, Ont. The price is $73,000.

Selkirk, Man., will spend $150,000 this year on water and sewerage systems.

Brantford property owners turned down a by-law to vote $140,000 for drainage purposes.

The plumbing contract for the enlargement of the Jamieson Avenue Collegiate Institute at Toronto has been awarded to Lewis LeGrow for $647 ; the heating to Keith & Fitzsimons for $2,475 ; the electric wiring to Fred Armstrong for $190 ; and the tinsmithing to Robert Rennie & Son for $828.

PLUMBERS ASK INCREASE.

The agreement between the master plumbers of Toronto and the union has expired, and the men have asked for a minimum rate of 40c. an hour, an increase of 5c. Employers, however, are not anticipating any trouble, as at present local business is slack, and no doubt the union in cognizance of this condition will consider the time inopportune for a strike. At present there is no master plumbers' association, and contracts in many cases are taken at prices that would hardly justify any increase in wages.

GARBAGE DISPOSAL.

A process of disposing of night soil, garbage and refuse of all kinds by mixing them with chemicals and coal dust in such proportions at to produce a highly inflammable combination has been devised and patented by Andrew Engle, of Metz, Iowa. The obnoxious matter is said to be entirely disinfected by the chemicals added, while the resulting fuel costs but $1 per ton and is as rich in heat units as the more expensive grades of coal. Slaked lime and coal tar and coal dust are the principal ingredients, and the resultant mixture may be burned either fresh and wet or dried in the form of briquettes, which, being entirely without odor, may, it is said, be stored with entire safety in the boiler room.

IMPROVEMENTS AT HAMILTON.

W. J. Walsh, master plumber, Hamilton, is erecting a new workshop behind his store and intends to improve his window and showroom by installing new floors, etc., and painting the exterior. Mr. Walsh is making a specialty of installing natural gas fixtures.

AUTOMATIC PIPE WRENCH.

The one-handed wrench shown in the accompanying cut consists of a tubular steel handle, a drop forged inserted inserted jaw, a drop forged movable jaw, while confined in the handle is a tempered spring which is compressed by the use of the trigger to throw the jaw open. The rebound of the spring closes the jaw on the pipe or nut, so that the spring is at rest at all times except

RETURNED
APR 16 1906

Irland Automatic Pipe Wrench.

when the jaw is opened. The wrench is made of steel. Each part is interchangable and the rivets are a drive fit. Being one handed the operator is enabled to reach at arm's length into almost inaccessible places with the wrench which is manufactured by the Irland Pipe Wrench Co. Anyone desiring further

information regarding the wrench is invited to write to the editor of this paper.

AN INTERESTING REBATE CASE.

The trial of R. D. Wood & Co., charged with accepting a rebate on a shipment of iron pipe from Florence, N.J., to Winnipeg, recently took place at Philadelphia. The defence admitted that the Baltimore & Ohio Railroad Company had received 1½ cents per hundredweight for terminal charges on the shipment; that 11½ cents per hundred had been paid to the Mutual Transit Company, and that 11½ cents had been retained by R. D. Wood & Co. as that firm's share. It remains to be developed what disposition was made of the remaining 25 cents of the 49½ cents, which the Government claims is the listed freight rate.

ELECTRICAL ITEMS.

Railway men are watching with interest the trial trip of the Strang gasoline electric car from New York to San Francisco. The experiment is to determine the speed and cost of such a combination.

* * *

The surveyors are about to commence laying out the new electric road from Seattle to Vancouver, and it is expected that by the Summer of 1907 the cars will be running. The specifications call for coaches of the 50-mile an hour class.

* * *

The Lyons Company of Montreal have asked the city for a franchise to carry on a residential lighting business there.

* * *

Stout & Miller, electricians and gas fitters, Hamilton, have secured the contract for a $1,000 job in installing an incandescent lighting plant in the Hamilton hospital on the conduit system.

* * *

The town of Port Arthur has applied to the Government for a lease of the Great Dog Falls, on the Kaministiqua River, which are capable of developing 30,000 horse-power.

* * *

At the meeting of the Canadian General Electric Company, in Toronto, on Wednesday, March 14, the directors report showed profits for $608,206 for 1905. Dividends amounting to $335,449 were paid from this and $90,762 was carried forward.

* * *

The Windsor Hotel, Montreal, will install an electric plant for the production of its own power and light. The new equipment will have 1,000 horsepower, which, being more than enough for the hotel, will supply light to those in the vicinity.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 6, 1906.

Since the first of the month orders for plumbing and steamfitting supplies have been very free, and shipments of all lines are increasing.

While no particular class of goods can be said to be monopolizing attention, there is great activity in baths, lavatories, sinks, and other lines of enamelware. Prospects for business in this branch of the trade are exceptionally bright.

Prices generally are being steadily maintained, and in one instance—solder—an advance has been declared. Ingot tin has been firming up of late, and has now reached such a high level that it has been found necessary to ask higher prices for solder.

RANGE BOILERS—Trade is maintained actively and prices are steady. We quote: Iron clad, 30 gallon, $5.00; 40 gallon, $6.50, net list; copper, 30 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Demand is brisk, and as pig lead is somewhat firmer, prices are very steady. We are still quoting: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Business is said to be good, especially since the first of the month. We are still quoting: Discounts on all sizes of nipples up to 6-inch, 67½ to 70 per cent.

IRON PIPE—This trade is now on a more secure basis than for some time past. Prices are being adhered to closely, and we are quoting: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00;; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

SOIL PIPE AND FITTINGS—A large turn-over is being done by the supply houses here. We are still quoting as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent off. Fittings, 60 per cent. off.

SOLDER—The advance made by a few of the local dealers last week has been generally declared during the past few days. This condition is a result of high prices in tin, and the firming tendency displayed by pig lead at the present time. We quote: Bar solder, half-and-half, guaranteed, 22¾c. to 23c.; No. 2 (wiping solder) 18c.

ENAMELWARE—Orders are large and promise well for a busy season. We give prices: Canadian bath tubs, plate E 1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special, $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim. 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 6, 1906.

Some large shipments of soil pipe have gone to outside points during the week. All other lines have also felt the impetus of the opening up of Spring, and a good general business is being done. City trade has not yet assumed the proportions that usually obtain at this season of year, despite the increased building operations. People seem to be holding back their plumbing contracts. Hot water heaters, although usually quiet during the Spring months, are going out just now in a satisfactory manner on account of the amount of building that has been done all along.

All materials remain the same in price as our last quotations.

LEAD PIPE—Demand keeps active in all lines. Prices firm, no change. We quote: Lead pipe, 8c. discount, 20 per cent.

SOIL PIPE AND FITTINGS.—Considerable business in being done. Prices remain the same. We are quoting: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Demand continues good, with no further changes in price. Our quotations are: Black, 1 inch pipe, $4.37; galvanized, 1 inch pipe, $6.02. See current market quotations for other sizes.

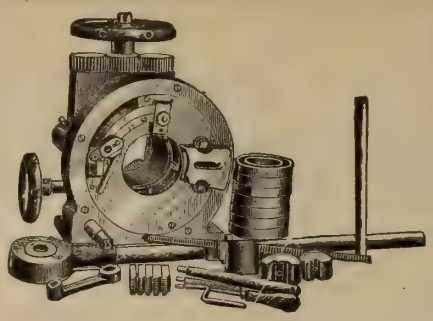
IRON PIPE FITTINGS—Prices are the same as previous quotations. Large quantities are going out. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent; Canadian malleable, 35 per cent.; American malleable, 25 per cent.;

malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or kalvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS—A fair amount of business is being done, although between seasons. There are no price changes. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Business quiet, but a little better than usual at this time of year. Prices remain the same. We quote as follows: Hot water, 47 1-2 per cent.; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER—Prices firm and a good demand has been experienced. Bar solder, half-and-half, guaranteed, 23 1-2c., and wiping at 21c.



ENAMELWARE — Trade continues good in all lines. All manufacturers very busy. Our quotations are as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

PRESENTATION TO "JACK" DAVIDSON.

Last Saturday at one o'clock the staff of Caverhill, Learmont & Co., Montreal, surprised "Jack" Davidson, who is leaving the firm to accept the secretaryship of the M.A.A.A. J. W. Dowling, on behalf of the staff, made a nice little speech in presenting a sectional bookcase. Mr. Davidson replied in a feeling manner, referring to the sorrow he experienced in parting from the boys with whom he had been associated since his old office boy days.

HOSE IN SOUTH AFRICA.

C. M. Kittson, Dominion commercial agent for South Africa, at Capetown, reports a large demand for garden hose of the plain and wired types in one-half and three-quarter inch sizes and fifty-foot lengths. The principal supplies at present come from the United States, England and Germany. Fire hose comes largely from England, but none of the large importing houses carry any stock.

Rapid-Working

Both in threading and cutting off.

Merrell Portable Hand Machines

do better and more rapid work than other hand machines. They make quicker changes from size to size of pipe; have a greater range of work.

Four sizes—Nos. 5, 6, 9 and 11. No. 5 cuts and threads pipe 1 to 4 inches, inclusive; No. 6, 1 to 6 inches; No. 9, 2½ to 8; No. 11, 4 to 12 inches, inclusive.

Isn't it Best to use the Kind that are

GUARANTEED FOR 5 YEARS 5 YEARS 5 BY

GLAUBER, CLEVELAND, OHIO, U S A.

—buy branded pipe; you're sure then—

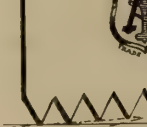
Simply putting the brand on the pipe doesn't make it better pipe—

Unless we put the "better" into the pipe first, we'd not DARE brand it.

That brand, put right into the metal every three feet while the pipe is hot, means we guarantee the pipe's quality.

"Guarantee" means all that it ought to mean to you—and that's a lot.

Maybe you think our prices for P-H pipe show the quality we put in the goods? They don't—



This better pipe costs you just as much as the kind you buy WITHOUT any guarantee—and that the makers aren't sure enough about to brand.

Will you read the book that makes the whole story plain?

Glad to send you a copy as soon as you ask.

MUELLER GROUND KEY WORK

No. 49 STOP & WASTE COCK.

The cause of stop cocks leaking at the waste hole may be traceable to sand rings that were left by the grinding, offering channels which it is easy for the water to follow around the key.

After the sand grinding of Mueller Stop Cocks, the ground surfaces are polished in oil so that any sand scratch that might have been left is removed. There is no chance for them to leak at the waste hole.

Mueller Stop Cocks are made with straight way and round way, in solid handle, socket head and patent cap patterns and in all styles of pipe connection. The cock illustrated has a straight way, iron pipe connection and the patent cap pattern and iron pipe style.

Each cock bears the Mueller trade mark and is *unconditionally guaranteed.*

HOW TO INVEST YOUR MONEY

to the best advantage

A good investment is one that pays.

The best investment is the one that pays the most.

Here's your chance—and no gamble about it either.

The NATURO Closet

brings big returns in profits and increase of business.

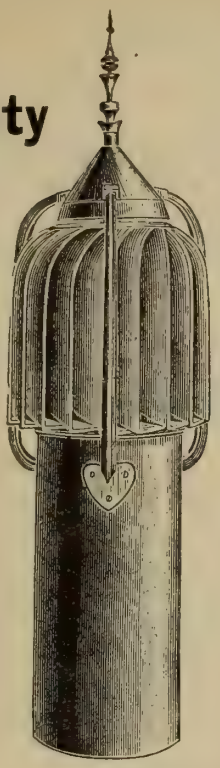
The dealer handling NATURO has sources of trade unknown to outsiders.

In this way he never worries about competition for much business is thrown his way.

Any chance about that ?
Want to know more about it ?

Send for our Illustrated Booklet.

THE NATURO COMPANY



C. H. MUCKENHIRN, President. **Salem, N.J.**

It Saves Lives

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

MONTREAL, June 12th, 1903
Canadian Pacific Railway Company.
Messrs. J. W. HARRIS CO., LIMITED,
7 St. Elizabeth St., Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "AEOLIAN" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,
E. H. McHENRY, Chief Engineer.

Know about the

NEW Oxford Boiler?

You need to——

You need to know about it because it will make more money for you—any way you look at it.

The new Oxford push-nipple metal-to-metal connection puts an end to leaky joints.

The way the boiler comes to you saves you half a day getting the boiler set up —

The sloping-inward fire-pot walls and the bell-flues in the double-sized first section give you talking points—selling points—profit points—anybody can see and nobody can match—

Get after the good trade—begin NOW —with

The Oxford System

of

Hot Water Heating

RIGHT now is the time to hustle hard for business—Spring right 'round the corner and building getting active—

Right now, when people who had boiler troubles last Winter are mad about them—

Tell them you can end boiler woes and insure house heating that does heat.

You can—if you will ask us to tell you about the "B Series."

WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and Complete Hotel Kitchen Outfits, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

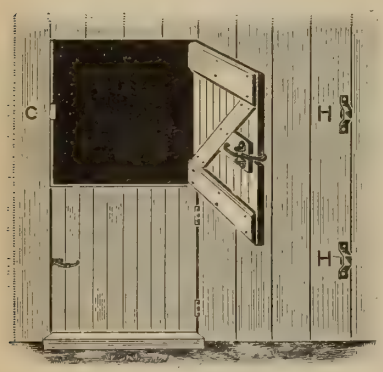
THE ONLY ONE

The Wizard is **THE ONLY** adjustable Hinge Hanger to be had. Doors hung with the

WIZARD ADJUSTABLE FLEXIBLE HANGER

may be placed as close to the building as desired, thus making **THE WIZARD** the best hanger for winter weather.

THE WIZARD is easily put in place, and as it takes the regular ¼ inch flexible hanger track you do not have to carry a special track.

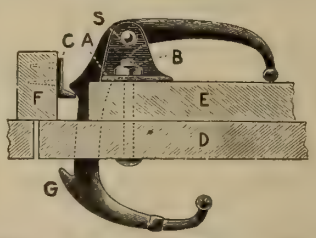


THE WIZARD is finished nicer than any other hanger on the market and each pair is packed complete with bolts

Every day wasted means a lost sale. See your jobber at once.

MADE IN CANADA BY

Safety Door Hanger Co.



HAMILTON, - ONTARIO

Louden's Double Acting Door Latch

No more Broken Doors with the Wind

It holds the door closed by engaging the catch C and holds the door open by engaging the bracket H on the wall. To open the door when closed, all to be done is to pull the handle of the latch, and to close when open, do the same. It is a simple, cheap, durable device, and will pay for itself several times every year.

Refrigerators

of All Kinds Suitable for the Home or Store

The above cuts illustrate three of the most popular patterns of the McCray Refrigerators.

The McCRAY Patent System

This is without question the most perfect system of refrigeration ever invented, and McCray refrigerators are all built under the McCray patents, which give such an absolutely perfect circulation of pure, dry, cold air, that foods are always kept in perfect condition.

In the McCray Refrigerator the circulation is so perfect and continuous that there is not the slightest odor or taint.

McCray Refrigerators are lined with opal glass, tile or white wood.

The Peerless "American Twin"

EASY TO OPERATE

FREEZER

The Twin

is a unique production, in that two flavors can be made with one operation.

The can is divided by a vertical partition which rests against the cover, effectually preventing the passage of the contents from one side to the other.

It is operated by a lever, a much easier method than the old time crank machine. The scrapers work automatically, the frozen particles being thoroughly scraped off the can.

Though it has been on the market but two seasons, sales have exceeded all expectations.

Nine sizes—2, 3, 4, 6, 8, 10, 12, 15 and 20 quarts.

Order Promptly Filled.

The Gem

is the old reliable stand-by, which has been more often imitated than any other freezer.

It is the only real double-action freezer with a reputation for good work.

The double action insures positive scraping of all particles from the can.

All that is best in Ice Cream Freezers is embodied in the Gem, as evidenced by the test of many years of practical use.

Besides being the easiest running crank machine, it has had the largest sale of any freezer on the market.

Ten sizes—Toy, 1, 2, 3, 4, 6, 8, 10, 12 and 14 quarts.

All Sizes in Stock

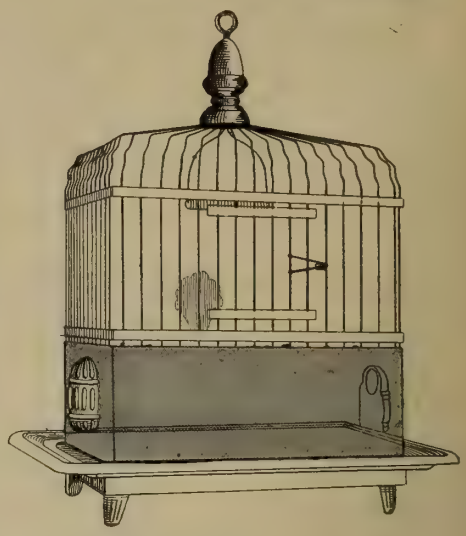
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information nc effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.



Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

A Merchant

took a chair, put on a coat of ground color (so as to give the old piece of furniture uniform ground work) then applied, to part of the chair, a coat of

Dark Mahogany Brant-Lac

The result showed clearly what an excellent varnish wood-stain **Brant-Lac** is. The chair was placed in the window and many enquiries resulted.

You can do the same. **Brant-Lac** sells itself if it gets a chance.

BRANT-LAC can be had in ten different colors.

With each shipment we send a hanger showing the different shades. This hanger enables you to "demonstrate."

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

NEWPORT, MON., ENGLAND

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

A Winner For Dealers

High quality, purity and durability is what puts The Martin Senour Paint ahead of all competitors, gives it a ready sale and makes it a general favorite among paint users.

Inside or outside the result is the same—a handsome finish, splendid wear and everybody satisfied. Its the old story of the best being the cheapest and WINNING IN THE LONG RUN.

Paint that does better work, looks better and wears longer is the kind that brings future orders and establishes trade.

THE MARTIN-SENOUR PAINT

won't sell itself and we don't claim it will last forever, but we do stand right back of our guarantee that it's made of unadulterated White Lead, Zinc and Linseed Oil. We sell it subject to chemical analysis—what could be fairer than that?

If you are in a mood for money-making and trade-building write to us. Our proposition will interest you and we would like to tell you about it. For particulars address

HARDWARE, MONTREAL

Steel Shafting.

Polished, Cold Drawn, absolutely straight and true to size.

We have a large stock in rounds and squares.

A list of the sizes in our stock will show how complete it is.

Our stock of all other lines of iron and steel is equally full.

Rounds in stock :

$\frac{3}{16}$ $\frac{1}{4}$ $\frac{5}{16}$ $\frac{3}{8}$ $\frac{7}{16}$ $\frac{1}{2}$ $\frac{9}{16}$ $\frac{5}{8}$

$\frac{3}{4}$ $\frac{13}{16}$ $\frac{7}{8}$ $\frac{15}{16}$ 1 $1\frac{1}{16}$ $1\frac{1}{8}$

$1\frac{3}{16}$ $1\frac{1}{4}$ $1\frac{5}{16}$ $1\frac{3}{8}$ $1\frac{7}{16}$ $1\frac{1}{2}$

$1\frac{5}{8}$ $1\frac{11}{16}$ $1\frac{3}{4}$ $1\frac{15}{16}$ $2\frac{3}{16}$ $2\frac{7}{16}$

$2\frac{11}{16}$ $2\frac{15}{16}$ $3\frac{7}{16}$ $3\frac{15}{16}$ inch.

Squares in Stock :

$\frac{1}{4}$ $\frac{5}{16}$ $\frac{3}{8}$ $\frac{1}{2}$ $\frac{9}{16}$ $\frac{5}{8}$ $\frac{3}{4}$ inch.

Lengths 14, 16, 18 and 20 feet.

Remember our stock of iron and steel is always complete.

Do you stock more than one kind of iron ?

There is a demand for a superior grade of iron for special uses.

A superior grade of iron is often required by **contractors** for parts of hoisting machinery.

Miners demand safety in their hoisting apparatus and require reliable iron.

Lumbermen need iron they can trust to hold their booms of logs, to repair their chains and for various other uses.

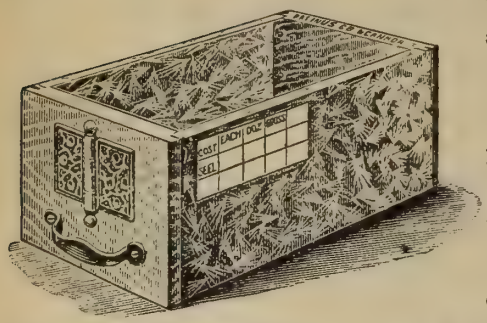
There is more money in selling goods of the first class than in seling cheap goods.

This is as true of bar iron as of tin pans.

Lowmoor Bar Iron will meet the requirements of anyone who demands a reliable iron.

It has been submitted to all manner of tests, above all to the test of experience.

It has stood the test.



Lowmoor Bar Iron can be sold at a better profit than common iron. It is not subject to competition. It stands by itself.

Stock **Lowmoor Bar Iron** and make money out of your iron business.

FROTHINGHAM & WORKMAN, LIMITED

1809 HARDWARE, MONTREAL 1906

METAL SHELF BOXES

Wood drawers cost too much money, consume too much space, and besides shrinking and splitting are hard on shelves. The

BENNETT PATENT SHELF BOX

has none of these drawbacks. It is low in price. It saves 20 per cent. shelf room.

It is made with metal sides and fine oak front, hard oil finish. It is a "thing of beauty and a joy for ever."

Our **Price List** shows how hardwaremen, whose shelves are fitted up with wood drawers, waste money. If you are interested in **store economy**, write for price list.

AS OTHERS SEE US

A Few Compliments from Readers and Advertisers Regarding Our Special Number.

When the publishers of Hardware and Metal decided to make a wide departure in the arrangement of the reading matter and advertising pages of the annual Spring number the change was made with some fear that it would not be appreciated by advertisers. This fear has been dispelled, however, as while innumerable letters commending the change have been received, no one has yet sent in a word of criticism. The placing of all advertisements in departments in the front and back pages, and the grouping of all the reading matter in the centre of the paper can, therefore, in the light of such universal approval be considered a permanent arrangement for future Special Numbers.

That the 1906 Spring Number was a success and an improvement in every respect upon all previous issues is well proven by the number of letters received, a few of which are reproduced on this page. From an advertising standpoint the issue was about 30 pages larger than in any former year, while the standard of the reading matter was much improved, and the entire number illustrated in a pleasing and thorough manner.

Following are a few of the letters received:

* * *

Mr. F. W. Davis, traveling saleman, representing Sanderson Pearcy & Co., Toronto, when sending in a subscription, said:

"I think he would also like a copy of the Special Number if you have a copy left, which is without doubt one of the nicest and most useful magazines of its kind printed."

* * *

Campbell Bros., manufacturers of axes, etc., St. John, N.B., write:

"Special Number of Hardware and Metal just to hand and we are very much pleased with our advertisement and think the workmanship of the whole journal surpasses any you have previously published.

* * *

Mr. William Smaill, secretary-treasurer of the Canada Horse Nail Co., Montreal, writes:

"With reference to the Annual Spring Number of Hardware and Metal under date of 24th inst., copy of which we have carefully inspected from cover to cover: it affords us pleasure in conveying to you our appreciation of the same, and the labor such a copy involves. We also desire to express our preference for the method adopted in this issue of separating the reading matter from the advertisements. Taking it altogether, viewed from every standpoint, it is a most satisfactory number, and reflects a great deal of credit on your stoff in all departments."

Mr. F. J. Taylor, manager of the Western Foundry Co., Wingham, in a letter regarding advertising, said:

"We received to-day a copy of the Special Spring Number and are very much pleased with it."

* * *

Mr. B. S. Stephenson, associate editor of the Iron Trade Review, Cleveland, Ohio, writes:

"Our letter of yesterday was written before I had a chance to examine the special issue of Hardware and Metal. This is merely a note of congratulation which it certainly deserves, both from the standpoint of material and typographical appearance, and from the amount of advertising carried. The issue is a most commendable one."

* * *

Mr. W. H. Wiggs, the Mechanics' Supply Co., Quebec, writes:

"Your Special Spring Number certainly deserves the highest praise, as it is well gotten up and the articles I find in it are a great improvement. It makes a very reliable number. The arrangement of your advertising matter is also excellent. I trust that this edition will bring both you and your clients the most satisfactory results."

* * *

Mr. J. A. Harrison, secretary of W. H. Thorne & Co., St. John, N.B., writes:

"Your Special Spring Number is a credit to yourselves and the trade that it represents. Although the writer has not yet had time to read all the copy, what he has read seems to be very much to the point, and there is no doubt that it will be a great help to all engaged in the hardware and metal business, both as employers and employes. Your arrangement of having the advertisements at either end, with reading matter in the centre, is, we think, a great improvement."

* * *

Mr. S. H. Calvert, manager of the hardware department for the R. D. McNaughton Co., at Moosomin, Sask., writes:

"Your Spring Number to hand, and I have read same with a great deal of satisfaction. You certainly improved this issue very much by placing the ads at front and back of same. Am quite disappointed after looking through your special issue to see that the manufacturers of the supposed best range in Canada have nothing to say. Might say that when a person is pushing a line he is anxious to see what the manufacturers have to say for themselves. Would like very much to see an item in your paper requesting wholesale houses to send invoices promptly. There are a couple of houses in Winnipeg that send these about eight days after the goods have been shipped. Several times we have had cars in our warehouse days before the invoice would come to hand. You can easily understand the trouble this would cause. On two different occasions we found it necessary to wire eastern houses for invoices with a car of hardware in the store waiting to be marked. This Special Number is worth to the writer more than a year's subscription.

* * *

David Maxwell & Sons, manufacturers of farm implements and hardware specialties, St. Marys, Ont., write:

"Your Special Spring Number of March 24th is a very creditable production both as a specimen of the printer's art and the general arrangement of the matter."

* * *

The daily newspapers quoted extensively from the Special Number, the article on "High Rates of Interest" attracting attention in New York banking circles after being copied and quoted from by many of the leading daily papers in the large Canadian cities. Speaking of the whole number, the Montreal Herald said:

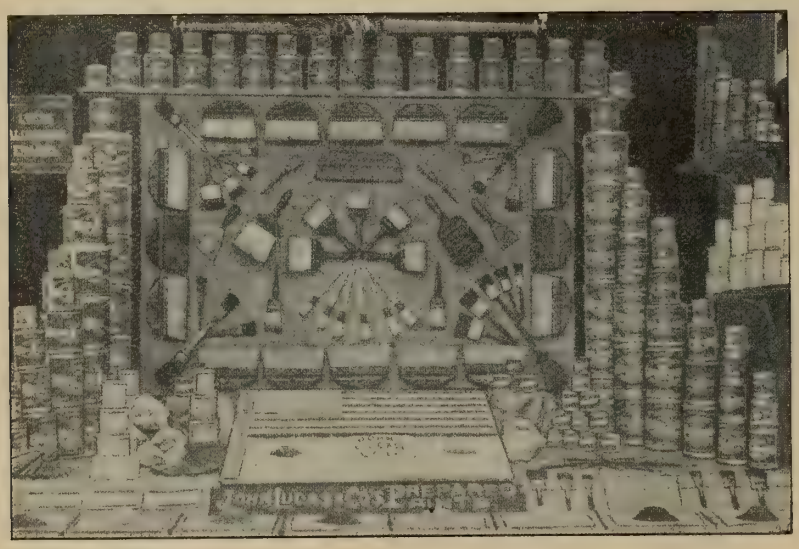
The Annual Spring Number of Hardware and Metal, which is just off the press, is probably the most ambitious number of its kind which this journal has yet issued. Not only is it larger than in former years, but its general appearance shows a marked improvement. It is printed in clear type on good paper, and the general effect is enhanced by a number of half-tone illustrations. The table of contents contains many articles of value to the hardware retailer and to storekeepers in general, and, altogether, the number is one which cannot help but prove interesting and instructive to its readers.

* * *

"There is a lot of good stuff in that Special Number of yours," were the words of one of the departmental heads of H. S. Howland, Sons & Company, Toronto. Different ones in this firm have expressed their appreciation of the special edition of Hardware and Metal, and on more than one occasion the attention of callers has been directed to articles of interest contained therein.

* * *

"We like our ad in your Special Number very much. Can we have a few extra copies," telephoned Mr. C H. Fleming, manager of the Toronto branch of the Capewell Horsenail Co., the morning after the issue was mailed to our readers. This is only one of several compliments paid to the mechanical make up of the number.



WINDOW AND INTERIOR DISPLAY

HOUSECLEANING TIME.

When the Summer sun moves southward and the short Winter days begin to lengthen new life and vigor is imparted to mankind, tonics are in demand and a general desire is awakened for a different environment than that which was enjoyed during the cold Winter months. The tailor is made glad by orders for new Spring suits or overcoats and the hardwareman, if he is enterprising enough to go after the trade, can capture a big trade in woodenware and brushes from the housewife who has to face the disagreeable task of Spring housecleaning.

The labors of housecleaning can be lightened much by the use of the many lines for sale in hardware stores, and it is good business as well as the duty of the merchant to bring the modern labor-saving devices before the attention of their women customers by attractive advertising in the local papers and by catchy window displays of whitewash, scrubbing and paint brushes, patent mop wringers, carpet sweepers, woodenware, carpet beaters, wall and cobweb brushes and brooms, ladders, window cleaners and other such goods. The man of the house can be appealed to to save doctors' bills by seeing that the drudgery of scrubbing and cleaning is done away with by purchasing at small cost the result of the latest inventive genius. "It is cheaper to wear out woodenware than women's," lives would be a good thought to emphasize in the display.

The accompanying picture shows a good display of paints, colors and brushes, and while the arrangement of the brushes is not by any means original, it is a thousand times better than keeping a lot of brushes together in a corner or leaving them out of the window altogether. The grouping offers an opportunity for originality, and it is the arrangement that tells in a window display. To overcome the flat and set appearance of the brushes holes might be bored in the background and some of the brushes attached by inserting the brush handles in the holes.

Catchy Display of Brushes, Prepared Paints and Colors.

This window should be followed up with a "housecleaning" display in which the lines already referred to could be utilized. If possible arrange a dummy woman on a stepladder with a duster, window cleaner or whitewash brush in her hand, or one using a patent mop wringer as a central figure, with large woodenware in the background and brushes displayed artistically from the ceiling or walls. Such a display should bring results, as too many housewives are unfamiliar with the housecleaning labor savers to be found in a hardware store.

But the display should not end in the window. A woodenware and housecleaning goods section should be established, as even if space is limited a neat arrangement of the goods will attract attention and encourage buying. Show that you or your clerks have some ideas about taste and arrangement, and even if an extra broom or clothes pin is not sold, the display will make the store more popular with women customers.

THE WINDOW COMPETITION.

With the Easter holidays half the month is gone and only two weeks are left in which to prepare a window display and have it photographed and entered in the competition we announced three weeks ago. The conditions of the competition are simple, the only stipulations made being that the photograph must be mailed before May 1, it must be of a window display of seasonable Spring hardware goods rather than of a store front, and a brief description of how the display was made must accompany each photo. The prize of $5 is worth competing for, but the experience gained and the honor of being the winner is worth even more than the prize. It isn't too late to enter, so swing into line at once.

CHANGING THE WINDOW DISPLAY.

Frequent change in the window display is most essential, but when you have made a popular hit don't lose the best results from it by changing it too soon. The first results come from the people who are attracted by it in passing—where it ends, if the display is taken down too soon. If it remains long enough the second and best results begin through the people who are enough interested to tell and bring their friends to look; that is the stage when people get to talking about it, when it possibly is mentioned in the local papers, when people go out of their way to have a look at your window and begin to notice the store itself.

You never can tell in advance how long it will pay to leave a certain display up; that is for the public to decide for you and you must abide by their decision. So long as they keep bringing friends to see it do not disappoint them by its removal.

SUCCESSFUL SALESMANSHIP

SALESMEN WHO "DO" BUYERS.

By E. X.

"Do you know I often feel sorry for some of the 'jays' to whom I have sold a big bill of goods. I occasionally load a man up with so large a line of my stuff it's a shame to take the money, and my conscience troubles me afterward."

The above remarks were made by my fellow passenger on a Yonge street car a few days ago. The speaker apparently was about 30 years of age, and the remarks were addressed to a companion of about the same age. Being a salesman myself, I was interested.

From the further talk I gathered that the salesman who had experienced the occasional twinge of conscience was a comparatively new man on the road. At least the tone of his conversation indicated that much, and further that he would be a failure as a salesman if he continued to pursue the tactics he had described.

One of the cardinal principles which a salesman should observe is, never to sell a customer more goods than he would purchase himself were their positions reversed. Sales of the kind mentioned always acts as a boomerang. Instead of making a "customer," they have the opposite effect—the salesman has simply secured one order, and in getting it he has lost the confidence of a possible customer.

Customers—Not Orders.

The general manager once said to me when I was starting out for a new house: "Remember, now, we don't care for orders; what we want is customers." The remark sounded so paradoxical that I inquired his meaning, and he explained at length. He didn't want his salesmen placed in a position where their conscience would trouble them.

No man can succeed as a salesman unless he wins the confidence of his trade, and there is just one way to do this—by fair and square dealing. He may pick up occasional orders and "load up a jay" here and there, but he will find in a short while that his competitor is doing the bulk of the business in his territory; that is, if his competitor be made of the proper stuff, and guards the interests of his trade as zealously as he does those of his employer. Unless this is done, failure is the inevitable fate of a salesman.

Look Beyond Present Orders.

It frequently happens that a salesman's suggestions are not asked by a customer. More frequently, however, his advice is sought, and when it is it should be given conscientiously and with an eye to the future—not to the size of the single order he is taking.

Every salesman has among his trade a few "know it alls," who "know just what they want" and regard a salesman's suggestions with suspicion. The only way to handle a customer of this kind is to let him have his own way. Put down his order as he gives it, but be sure to treat him with respect, though be chary with advice. Nearly every man believes his own judgment is the best and doesn't like to have it questioned. After you have his order you can incidentally mention a few articles which are having a good sale in other localities, but which he has overlooked. Don't press him to buy any of these, however. He'll do it the next time you call; he doesn't want you to think you furnished the initiative.

The buyer who takes the salesman into his confidence is the one who gets all the best of it. He secures the full benefit of the salesman's experience, and not infrequently a better price than his "know it all" competitor.

Helps Customers; Protects House.

Of course a saleman's first duty is to his house, but no reputable business house wants to "load up" a customer with a stock of goods which he cannot handle to advantage and incidentally pay for when due. The new salesman is especially prone to look for large orders. He loses sight of the fact that he must "build up" his trade, and, in his anxiety and zealousness, is liable to do things which have just the opposite effect. Here are two good rules for new salesmen to paste in their hats. They come from two houses in the same line of trade:

"Don't try to get orders; try to make customers."

"Never misrepresent anything to a customer, and never sell him an article he does not need."

If new salesmen will follow these rules and work hard their chances for success will be bright indeed.

WHAT KIND?

It is not for you to say entirely just what kind of of goods you will carry in your stock.

To a large extent the purses of the people you serve decide that. You must suit your people. You must have the goods they want and call for, or go out of business.

That is where a man who goes in for quality strong, frequently makes a mistake. He overdoes it. He forgets that all people will not think and buy as he would like to have them.

You are there to sell merchandise. You want to sell the people what they want and educate them to buy better goods wherever you can. You want the best trade, of course, but on the other hand, you want to sell all the goods you can, and for that reason you must be prepared to suit all classes of people.

It is well to talk quality, but while talking quality do not let the impression get abroad that you are running a high priced store.

No part of your store policy demands finer treatment than this. There is plenty of opportunity for sensible discrimination on your part and don't forget that there is plenty of opportunity for costly mistakes.

UTILIZING SPACE PROFITABLY.

A certain drummer called upon a hardware dealer recently with a line of goods that took the merchant's eye as a specially good local seller. One difficulty confronted him; the goods were bulky and he had not room for them.

A glance over the crowded shelves and piled up counters made this excuse seem legitimate, but the practiced eye of the drummer had seen something. He looked at his watch, and, finding himself with a few hours to spare before train time, said: "If I convince you that you have plenty of room will you give me an order?"

"I certainly will," was the reply, and the drummer went to work. A stack of blankets was neatly folded and piled up. Shelf boxes that had been jammed in any way were straightened, and in many instances the contents of two half-empty boxes of the same goods were emptied into one. Plows and heavy hardware were rearranged, not always with a view to occupying the least space so much as to avoid future handling and dragging about to show them up. In less than an hour the merchant gave the order and then went on with the task in which the drummer had given him so practical an object lesson.

SEASONABLE ADVERTISING

LIST MAKING FOR NEW STORE.

Starting the new store furnishes plenty of opportunity for the ingenuity of a merchant, especially if he is unacquainted in a community, says The Commercial Bulletin. It takes plenty of enthusiasm, patience, hard work and good advertising. Usually the young man starting in business is very successful in this particular feature of retailing. He usually starts things off with a hurrah. Sometimes his wind is not as good for the long chase as that of the older head, but at the start he usually shows more enthusiasm and burns more of the red lights of activity. One of the men I talked with this week was a member of a western firm who recently began business in an old town, moving in and doing what they could to get a piece of the business.

With them it was simply a case of what many merchants call a very poor opportunity, if they would concede there was any opportunity there whatever. But these youngsters, full of enthusiasm and full of the gospel of up-to-date business methods, went at it with a will. Inside of three days after the store was opened many of the best people of the community had been there to see what all of the fuss was about. This advantage they have followed up. Their follow-up system is worthy of recommendation. Every person who visited the store on that date was given a souvenir and asked to register. That gave the new firm a start on a mailing list. To this they have added other names, and now they have the machinery for keeping in close touch with every person of consequence in the community.

No. 1. Feb. 15, 1906.

THIS is the first of a series of 15 cards which we intend issuing fortnightly. We issue them with a twofold purpose.

1st. — As a means of **Intellectual Profit** to those receiving them.

2nd. — As a means of **Financial Profit** to you in the saving effected by keeping closely in touch with our prices and the quality of our goods.

"Store News No. 1."

McClary's Imperial Graniteware

Once used is always used, hence our introductory offer. On Feb. 16th and week following we will give **10 per cent off regular prices** on this line and guarantee **every piece first quality. Terms Cash.** After 23rd regular prices will prevail. Enough said.

ST. MARYS HARDWARE, LIMITED

Successors to J. C. Gilpin.

A FRATERNAL CALL.

A donkey stepped into a store and the owner approached the beast and asked: "What are you doing here? You know this is no place for a donkey.' ' "I am here," said the donkey, "because I saw your advertisement on the fence that surrounds my pasture. I know you, too, must be a donkey, or you would place your advertisement in a newspaper where it would be read by people, not by donkeys. Being lonesome to-day, I thought I would be neighborly and make a fraternal call."

A CHANCE FOR CLERKS.

Some clerks take an interest in the advertising done by their store. Some don't. All should. To those who do we offer a handsome and serviceable fountain pen for the most catchy, best arranged and clearest worded advertisement of any line of goods carried in a hardware store, preferably, however, of seasonable goods in demand at this season. The ad must appear in a Canadian paper in April, and a copy of the paper mailed to Hardware and Metal not later than May 1 next.

Here's a chance to win a valuable fountain pen for little effort. Who will be the lucky one to win the prize and be known by the trade in all parts of Canada as an effective ad-writer?

THE FLAG SCHEME.

An excellent system for appealing to town trade has been inaugurated by St. Marys Hardware, St. Marys, Ont.

* * *

The scheme consists of issuing fortnightly cards with different designs on one side and advertising matter on the other.

* * *

The cards are bought in large quantities, so the company has merely to print the store news on the back and then to see to the distribution.

* * *

No. 1 of the series is illustrated on this page, and as will be readily conceded, is quite attractive.

* * *

The two cuts used are appropriate in size and the matter is not crowded. Sufficient information is given to make the reader "enquire."

* * *

St. Marys Hardware are quite pleased with the results so far, and they are to be congratulated on perfecting a decidedly original plan of advertising.

ADLETS.

Advertising has its own reward. Sow a good ad and you will reap public patronage.

* * *

Decide to be "one-sided" when writing your copy. See your goods in the light of "best."

* * *

The best trade-mark is an honest line of wares with an honest man back of them.

* * *

Advertising needs "fire." Never allow anybody the opportunity of reading your advertisements and then of saying, "The fire's out!"

* * *

Put yourself into your ads and your readers will put themselves into your store.

* * *

Don't allow the automobile of competition to run down your business neighbor. The sales road is wide enough for all.

A. A. B.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Cash or Credit System.

Fred C. Lariviere, president of Amiot, Lecours & Lariviere, Montreal, writes stating that there is an interesting article on "Changing a Credit to a Cash Business" in the Hardware Store Business Methods, a book compiled by R. R. Williams and sold in Canada by the MacLean Publishing Co., Toronto, for $1.00. Information on this subject was asked for by a correspondent in Hardware and Metal of March 24 and Mr. Lariviere's reminder is a timely one. The chapter referred to will be reproduced in an early issue of the paper.—Editor.

* * *

Self Nailing Machines.

Wm. Crellin, Kintore, Ont., writes asking for the address of manufacturers of self-nailing cheese box machines. Morgan & Co., Rochester, N.Y., manufacture these machines and Petrie & Co., Toronto, are the most likely firm in Canada to secure them from if orders are not sent direct.—Editor.

* * *

More About Fencing.

Job W. Taylor, 338 St. James street, Montreal, follows up his letter of last week with the following interesting comment:

After another week wrestling with the fence question in this country (and of course selling the best fence made), I notice a tendency among some of the hardwaremen to admit that they are not good salesmen, as often when presenting my card I am met with, "No, we do not handle fence, there are too many agents who go through the country and sell it cheaper than we can." This cannot be, unless the dealer is trying to get too much, as the man going through the country has expenses as well as the merchant. Then again, there is the man who without studying the merits of different fences, shuts his eyes and binds himself to handle only one kind, only to have his eyes opened later on to the fact that he has made a mistake, but, of course, he never blames himself. Then there is the man who meets you with his shoulders back, head up, eye bright, and general appearance up-to-date, who may have two or three kinds on hand and be unable to say yes to you at once, but is willing to go into the matter and see if you have anything that he thinks might be worth thinking about in the future. This man is always a successful dealer. Would there were more.

More Arguments for Association.

W. G. Pow, head salesman for W. R. Hobbs, Tillsonburg, writes: In looking over Hardware and Metal from week to week I have read with great interest the enthusiasm shown re the proposed retail hardware association and am anxiously awaiting the replies you get to "Lost, Strayed or Stolen" in March 31 issue. Being only a clerk I suppose I should be an uninterested party, but I feel that every clerk should be interested in such an organization, and were such an association formed hardware business in general would run more smoothly than at present.

During the past few weeks we have had several experiences which no doubt would be overcome in the event of forming a retail hardware association. For instance, not long ago we wrote for quotations on corrugated iron roofing for one of our best customers and a week later had a letter from the firm explaining how they had given us quotations on a certain date, and asking if they might expect the order. In the meantime they had sent a representative direct and secured the order at prices better than they quoted us and leaving our customer under the impression that we were trying to rob him.

Another incident happened not more than a week ago when a real green traveler representing a small firm, called on us and in showing us samples of packing, etc., miss-spoke himself and said he had just sold one yard of packing to a certain mill man in town. This mill man was practically our best packing customer and instead of trying to sell us first he loaded up our customer and then tried to load us. We, of course, told him what we thought of his firm and himself and were good enough to let him take his own time in packing his grip.

The above experiences are samples of ways of letting the public know the trade prices and in these days the average farmer is too wise to the market prices on hardware, paints, oils etc. One of the most unpleasant things in business is to have your customers ask for prices and then tell you how much you are making on your goods. Another way the market prices are exposed is through the newspapers. Were there no weekly hardware journal printed these market prices in newspapers would benefit the merchant but since the merchants are so well posted through Hardware and Metal the newspapers only hurt business by exposing prices to the outside world.

I fully believe these things could be stopped through a retail hardware association and will be very pleased to represent W. R. Hobbs, hardware merchant, Tillsonburg, at the proposed convention on Good Friday.

* * *

The Mail Order House Bit.

Bell & McEachren, general merchants, Stayner, write saying "Eaton's are flooding the country with circulars advertising fifteen packages of seeds for 25 cents, so we had to head them off here by going them one better." This reminds us of a story of how a slick salesman turned a neat trick on the seed department manager of one of Canada's leading mail order houses two years ago. The story is that the departmental store wanted to place a large bulk order for sweet pea seeds, but considered the prices quoted by the Toronto seed jobbers too high. The matter hung fire for several days, and in the meantime a smart Yankee learned of the situation and representing himself as the agent of a well-known Cincinnati seed house said he could beat the Canadian houses in this line as his firm had a surplus of stock and were willing to sell at only $9 per bushel. An order for upwards of a hundred bushels was secured and then the salesman got in his fine work. He went down to the market and bought as many bushels of vetch seed as he wanted, paying for them about 50 cents per bushel. Then he arranged the details of his shipment and secured cash payment after delivery, the similarity between sweet peas and vetch seed deceiving the buyer. The customers who bought the fake sweet pea seed in package form probably found difficulty in making the vetch vine grow sweet pea flowers, but the departmental store was too far away to register a kick conveniently and the incident was probably forgotten by most customers before they were ready to grab at another mail order "bargain."—Editor.

Driving Points for Wells.

In Hardware and Metal of March 10 a letter was published from Messrs. W. H. Turnbull & Son, Scotland, Ontario, who asked for information regarding driving points for wells. We learn that the R. McDougall Company, Galt, make a specialty of driving points in connection with their large pump business. Any reader who desires information regarding any branch of the pump business can secure it on application to the R. McDougall Company.

* * *

Potato Peeling Machines.

G. E. Potter, Berlin, writes: We have been asked several times in regard to potato peeling machines and would like to get in communication with manufacturers of those lines. If you know of any such kindly write at once. We know of the Northrope Mfg. Co., of Toronto, but want to get at others.

Note.—We know of no other manufacturers of potato peeling machines. There are, of course, many potato slicers and parers on the market, but we suppose our correspondent wants machines suitable for use in hotels, boarding houses, or by large families. The Northrope machine has many advantages and should give satisfaction.—Editor.

* * *

Press for Printing Labels.

P. O. Magnan, Plessisville, Que., writes: Can you give me the address of the Kelsey Press Company, manufacturers of printing presses.

Note.—The Kelsey Company is located at Meriden, Conn. One of their presses is suitable for printing labels on parcels where shipments have to be made quite often to one customer. The name of the MacLean Publishing Company should be mentioned in writing them.—Editor.

ART OF DOING BUSINESS

In an address before the Montreal Y.M.C.A. last week H. J. Fuller, manager of the Canadian Fairbanks Co., said business is more and more becoming a science, and to attain good business methods and good results, you must, first of all, have a good sale organization. An able sales-manager in one line will probably succeed in any other line. Knowledge of business from the bottom up was valuable but not absolutely essential. In a large business details were so numerous that the manager must not try to do everything, but, having all the facts placed before him by those who knew, come to a quick decision. In business only one end must be kept in view: the building of it up on a substantial basis, in order that it might last for years and show each year a profitable balance sheet. The only thing expected of a sales-manager was results; equally true of the president of the U.S. steel organization and the office boy. Every sales organization had two problems to solve: (1) the selection of goods to be handled, and (2) their satisfactory shipment. And the volume of business done depended upon two things: (1) making a profit on sales made, which (2) enabled the factory to be kept at its fullest working capacity; both departments must work harmoniously together, as cheapness most effectually helped business. Salesmanagers must at all times remember that results depended upon the showing between the cost of goods and the prices realized—less cost of sales-organization. For the cost of doing business was the rock upon which many and many a concern had foundered. It cost money to do business, consequently the best possible fair price should be got, and expenses must be kept down to the lowest possible figure. The business world's history showed that no old established house was in business to-day which had not produced goods of high quality. Such business alone would grow and continue. The recollection of quality remained long after the price was forgotten. Quality was the most important factor. No manufacturer was in the long run successful, whose only object was to get the lowest possible price, and prices must be consistent with quality, for unreasonable prices destroyed the object of competition. Plants must be kept up-to-date and increased volume in business must depend (1) upon good goods and (2) on cheapness in manufacturing cost.

Methods of Selling Goods.

The ways of selling goods were three: (1) to the jobber; (2) to the retailer, and (3) to the consumer; but the last had not been in vogue for many years among manufacturers and in certain lines could not be successful.

Sales moved the wheels of business, and unless orders came in the other departments would be dead. But no business could live and be prosperous simply by means of clever advertising and clever salesmen; quality in the goods offered was the first essential in keeping a business together.

Now, and this was most important, customers must be made acquainted with the goods, which must be represented in such a manner that they would become interested in them and enquire for them, when they must be reached by personal contact or through salesmen. And while a satisfied customer was the best advertiser, a very large class must be reached through advertisement. The concern which did not advertise was dead, and the customer must be informed where you may be found and of the improvements you are making. The man who saw and who became interested in the advertisement became a "prospect," meaning that a chance of doing business existed. And when the advertisement had brought the customer to your door its work was done and it was then up to the other end of the organization to get the order. Obtaining orders by correspondence was successful only to a limited degree, because competitors might send out salesmen. All salesmen did not fit the bill, but they could improve, for he did not believe that salesmen were born—not made. Persistent stick-ativeness was the most important quality, and willingness to work every day and every hour that could be fairly and profitably employed. The salesman to be of the greatest possible profit to the house and of course to himself—must be (1) a business man (2) must not sell goods indiscriminately; (3) must not sell goods not in stock; (4) must have confidence in his wares, and (5) make his customer feel that these were the very goods he required. This was a very rare quality, but could be cultivated.

Different Types of Salesmen.

The greatest bane of the house was the salesman who took orders at the customer's price. The price-getter, on the other hand, was dear to the heart of the sales-manager, convincing the customer and getting a fair price so that both parties to the transaction were satisfied. A sale was not really made until the goods were delivered and paid for. No line of business gave a man a better opportunity for developing what was in him than the position of salesman, who met all sorts of people, adapted himself to all and appealed to the intelligence of his customers. They were "drummers" no longer, for the men on the road to-day were increasingly of a high grade of intelligence with tact and good business ability. It was after all a question of the survival of the fittest, the unfit must drop down and disappear. The salesman who visited his customers studied their environment and method of approach, not forgetting, above all, the chief clerk, who would be at the top some day, and these changes often occurred with wonderful rapidity, and who did all these things would make a success of his profession. Personal friendship was not the most important factor in business, but still it was of great importance.

Entertainment accounts must be kept down and were only legitimate when they produced results, but the sales-manager, in considering them, looked at the salesman's volume of business. Graft-giving commissions were not only wrong, but were very foolish. In the Fairbanks two millions of business last year commissions, he presumed, did not amount to $50, and these were legitimate commission. Grafting occurred mainly in connection with civic departments, but judging from recent events, these fellows will soon disappear.

BUSINESS HONESTY.

It was the banker James H. Eckels who said "Be it enacted" never yet uplifted mankind. He advocated commercial ethics versus statute ethics. Lawyers can drive a coach and four through the most rigid statute ethics. But the commercial ethics established by the merchants of Venice, the British guilds and the counting houses of the world have done and are doing more for the world than any other force except religion. The upright moral merchant is the strongest moral force in any community. He exerts influence by example, not precept. The fundamental principles of successful business life remain forever the same. Business based upon wrong principles cannot permanently be successful. The results of wrong-doing are its best antidote. It is sometimes asserted that the standard of business honesty is not as high as it once was. The writer is inclined to think this an error so far at least as this and the mother country are concerned. The merchant who practices fraud seldom gets very high up in the profession. Large business interests can only be built up on a sound reputation for honesty. Without this neither capital nor smartness can hold out long against lack of public confidence. It is not too much to say that the wholesale houses of Canada as a whole have a very high standard of honesty. They recognize that a reputation for square dealing is their best asset and in their business affairs uphold a standard of commercial integrity which invites and maintains the confidence of other men.

Bathroom fixtures make a good display and sell well. Good lines are advertised in this paper every week.

Work up a reputation as a furnace expert, so that when any one is contemplating putting in a new furnace or heating plant they will send for you.

NOVELTIES FOR THE HARDWAREMAN

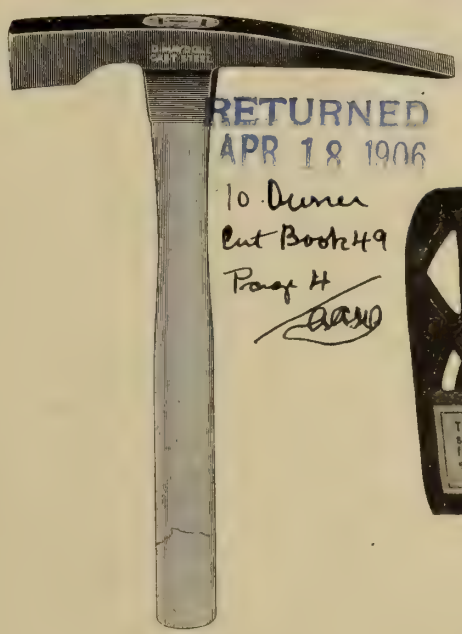
Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

A NOVEL TEAPOT.

A new idea in teapots is being introduced in England and the novelty is said to be selling well. The inventor of the new teapot has been at pains to devise a method whereby a perfectly fresh infusion of tea is obtained from

New Idea in Tea Pots

the pot without danger of any tannin being in it. The accompanying illustrations show the peculiar construction of the new teapot. When making tea, the teapot is first tilted backwards until it rests with the spout in the air. The lid is then taken off and the proper amount of tea placed in the receptacle formed by the perforated screen. Boiling water is then poured on, the lid replaced, and after three or four minutes' infusion the teapot is set upon its base again. By this action, of course, the tea leaves are taken right above the level of the water and are no longer in contact with it. The tea thus obtained is perfectly fresh and a very different beverage to and a far more healthy one than the stewed tea which is a feature of so many British homes. The teapot also makes for economy, for a second good infusion can well be obtained from the same leaves, Altogether the "Syp" teapot can be recommended on both points of health and economy. Write us for further information.



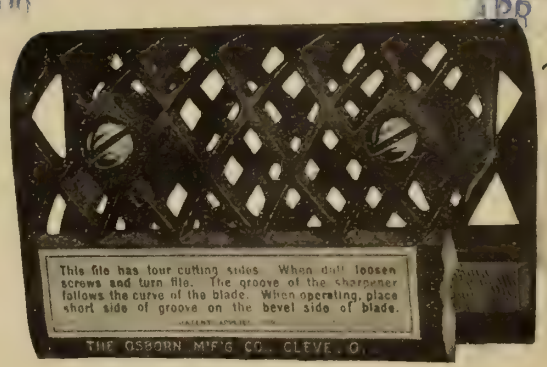
REVOLVING NAIL BIN.

There is no greater evidence of progress in hardware lines than a comparison of the shops of twenty or forty years ago with the stores of to-day. The jumbling together of all kinds of rubbish is a sign of decay and death in the twentieth century. Hardware shelving has created a complete transformation in ninetv per cent. of the hardware stores, and to-day some hardware establishments are more like a lady's boudoir. Qualities of cleanliness, nifty arrangement and all devices calculated to improve the appearance of the store, the facility of getting orders together and the saving of time, are desirable.

One of these arrangements is a nail bin made to revolve and so constructed that a salesman while standing in one position can weigh out from any of twenty different kinds of nails. It is so adjusted that whether it contains two thousand pounds of nails or only a few, it works easily. It requires only four square feet of space for all of the different kinds of nails that are ordinarily strewn through the store in dusty, dark, inconvenient and unattractive nail bins. The Revolving Bin Company are desirous of arranging with some Canadian concern for the sale of their line in Canada.

BRICKLAYER'S HAMMER.

The David Maydole Hammer Company has just put a new pattern of bricklayers' hammer on the market, as shown in the accompanying cut. It is made in



Bricklayer's Hammer.

four numbers, 561 to 564, inclusive, weighing, exclusive of handle, respectively 2¼, 1⅞, 1⅝ and 1 pound. The hammer is of high grade material, with second growth hickory handle and adze eye, the main feature of this pattern being in the cutting end, which is made straighter than usual. Most Canadian jobbers handle the Maydole goods.

NEW LAWN MOWER SHARPENER.

The Osborne Lawn Mower Sharpener, which we illustrate herewith, is made of iron with neat, durable, "Tucker" bronze finish. The file has four cutting sides, which when worn can be turned by loosening the screws in the holder. The sharpeners are packed in compartment boxes, having hinged cover with neat two-color label, making an attractive display package. The sharpeners are designed to retail at 25 cents each, and are being introduced to the trade by the Osborne Manufacturing Company, it being an entirely new line this season.

New Lawn Mower Sharpener.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

363. Crude asbestos.—A Lancashire manufacturer is desirous of getting into touch with mine owners in Canada who could supply crude asbestos.

364. Metal tiles, etc.—English makers of metal tiles, stamped metal ceilings and decorations, washable water paints and damp proof composition, varnishes, paints and enamels, carriage and motor lamps, are seeking suitable agents in Canada.

365. Mineral or slag wool.—Inquiry is made by a London firm for names of Canadian buyers of mineral or slag wool; also for the address of a firm who would be disposed to act as their representatives in the Dominion.

370. Scrap iron, etc.—A Manchester firm dealing in scrap iron, etc., would be pleased to hear from Canadian importers.

375. Cement.—A large East Coast cement firm desire to get in touch with Canadian importers; goods shipped and packed to suit requirements.

376. Machinery oils, etc.—A Hull firm manufacturing all kinds of [illegible] der, engine and machinery oils, grease, paints, colors, printing inks, and oil grease, invite correspondence from Canadian buyers.

378. Varnish, etc.—A Hull firm manufacturing varnish, dry-color paints and linseed oil, invite correspondence with Canadians to enlarge their business in Canada.

401. Cutlery.—A leading cutlery firm in Sheffield, manufacturing scissors, razors, carvers, pocket-knives, and all classes of table cutlery, invite correspondence with Canadian importers.

410. Mineral lubricating oils. — An East Coast firm of long standing would like to act as sole East Coast agent for sale of mineral lubricating oils, and invites Canadian correspondence.

414. Cutlery. — An old-established Sheffield cutlery firm, manufacturing all classes of goods, invite correspondence with Canadian buyers in order to extend their trade connection in Canada.

OUR CONDENSED ADVERTISEMENTS ARE READ

(1) **By the manufacturers and wholesalers.** A few weeks ago three large firms, The Canadian Aluminum Works, Chambly Canton, Que.; The Amherst Foundry Co., Amherst, N.S., and The Kingston Plumbing Co, Kingston, Jamaica, wrote for further information in connectfon with a small condensed advertisement of four lines, which cost 45 cents per insertion.

(2) **By the retail merchants.** The testimonial letters given **voluntarily** by firms who have inserted a condensed advertisement in HARDWARE AND METAL, and who have obtained what they were looking for.

(3) **By clerks.** A number of clerks have secured good positions through placing a small advertisement in our paper. There is no class of the trade who read our paper more thoroughly than the hardware clerks.

From Halifax to Vancouver, manufacturers, wholesalers, retail merchants and clerks read our paper carefully each week. Some of them will be interested in your wants. Think of it! In three minutes you can write an advertisement which will be read within a week by men in every province in Canada.

THE PRICE IS LOW

Two cents per word for the first insertion and one cent per word for subsequent issues. Thus any one of the following advertisements could be inserted once for 35 cents, three times for 70 cents.

SITUATIONS VACANT

TRAVELER calling on hardware trade in Ontario wants to secure a good position. Wm. Wallace, London.

35c. one insertion or 70c. three insertions

WANTED

HARDWARE CLERK with good experience. Young man preferred. State wages and give references. Wm. Wallace, London.

35c. one insertion or 70c. three insertions

FOR SALE

SET OF TINNERS' TOOLS, only used six months; cheap if sold immediately. Wm. Wallace, London.

35c. one insertion or 70c. three insertions

THE PEOPLE'S HARDWARE STORE,

HARDWARE AND METAL Essex, Jan. 27, 1906

Toronto, Ont.

Dear Sirs,—Within one month I have "bought and sold" with the best of satisfaction--the result of $1.68 worth of condensed ads. in HARDWARE AND METAL.

In the future when I want to know anything in the hardware business I will seek your paper.

Yours truly,

Jerson L. Cooke

RATES, PAYABLE IN ADVANCE

2c. per word for first insertion.

1c. per word for subsequent insertions.

HARDWARE AND METAL

MONTREAL, TORONTO, WINNIPEG, LONDON, England

Why Use Local Mediums

when your proposition is of interest to men in every province of the Dominion? Your customers like to buy from a large and varied stock, and you will be better able to supply your wants by advertising them in a paper which will bring you replies from all parts of Canada.

Why Not Branch Out

and secure agents to handle your goods on commission? There are hundreds of people reading our paper each week who are looking for just such a proposition as you have to offer.

You do not need to tie yourself up with a contract for a year. You can insert an advertisement once, twice or for any period of time you wish.

The growth of our want ad. department and the testimonial letters printed below is sufficient proof that Hardware and Metal Want Ads. pay, but they cannot pay you unless you make use of them.

The Miller-Morse Hardware Co., of Winnipeg, inserted the following want ad. in HARDWARE AND METAL, October 7th issue:

HARDWARE CLERKS WANTED

SIX bright, active, experienced hardware clerks wanted for a Winnipeg wholesale hardware house. None but thoroughly experienced wholesale clerks need apply. Address, stating experience, age, references and salary expected, Box 73, HARDWARE AND METAL, 511 Union Bank, Winnipeg.

The paper does not arrive in Winnipeg till Monday, and on Monday morning they engaged a clerk who answered the advertisement. By Tuesday they had received several replies.

HOWIE & FEELY,
Brantford, Ont., Mar. 6, '06.
HARDWARE AND METAL,
Toronto, Ont.

Dear Sirs,—Enclosed find 60c. in payment of advertisement for clerk. HARDWARE AND METAL is evidently read, as we have had a lot of replies. Kindly stop the advertisement, and oblige.

Yours very truly,
HOWIE & FEELY.

BOXALL & MATTHIE,
Hardware and Plumbing,
Lindsay, Ont.

HARDWARE AND METAL,
Toronto, Ont.

Dear Sirs,—Having had several replies to our advertisement in HARDWARE AND METAL last week for a hardware salesman kindly discontinue same.

Yours very truly,
BOXALL & MATTHIE.

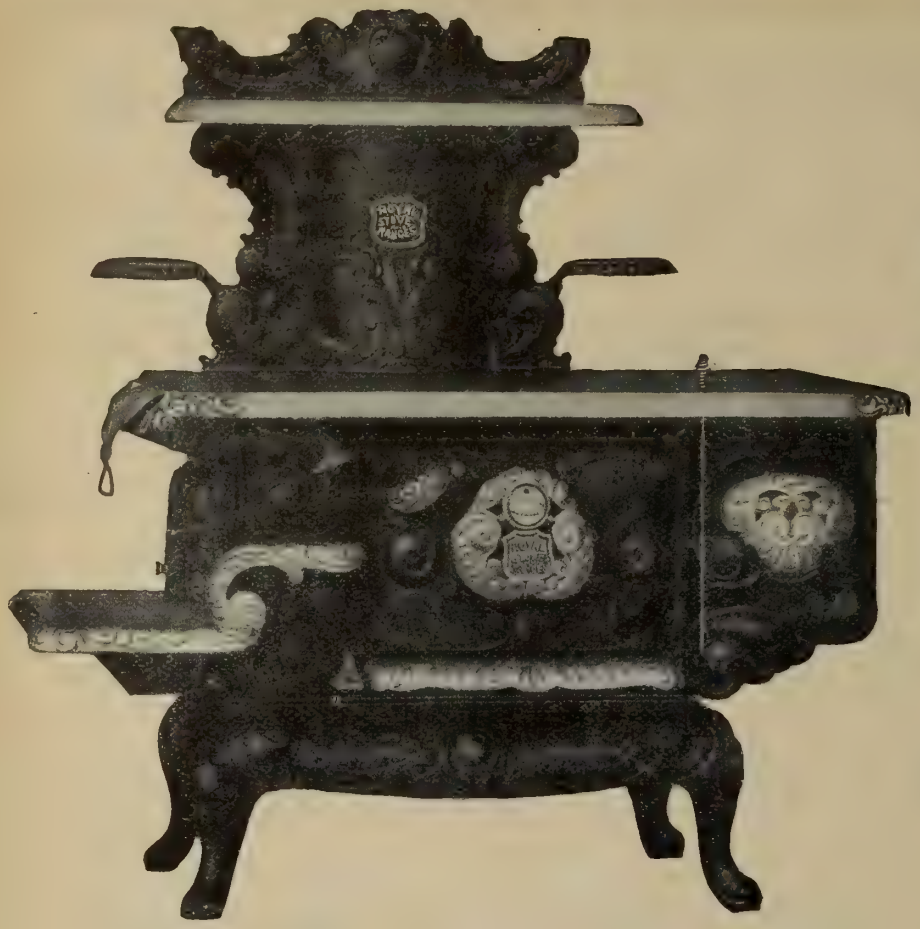
HARDWARE AND METAL, Picton, Ont.
Toronto, Ont.

Dear Sirs,—I wish to thank you for the number of enquiries received through the condensed advertisement which I inserted in your paper advertising my hardware and tinware business for sale. I certainly consider your columns a good medium for advertising any business of this nature.

Yours truly,
A. H. ILLSEY

HARDWARE AND METAL, Delta, Ont.
Toronto, Ont.

Dear Sirs,—I have received the offer of a number of positions through the small advertisement I inserted in Hardware and Metal. I secured excellent results and shall remember your paper next time I am in a similar position.



Yours very truly,
GORDON B. PIERCE.

Do you need more money in your business?
Do you want a partner?
Are you looking for a good clerk?
Do you wish to purchase a hardware, plumbing, stove or tinware business?
Do you want to sell your own business?
Have you any store fittings or old machines for sale?
Do you want to secure a good side line?

Let us assist you. We will carry your message quickly. Write our nearest office.

ADOPT MODERN DISPLAY METHODS.

Time is money and space is money. The hardware merchant who has not installed the most up-to-date system of shelving for displaying his goods is losing money every day. He is doing business under a handicap which his enterprising competitor will some day appreciate, and before he has awakened from his nineteenth century sleep his twentieth century competitor will have convinced the public that he is abreast of the times and carries the most complete stock.

How can you induce your customers to throw away their old lawn mower and buy a new one with ball bearings which a child can run with ease? How can you induce the farmer to replace his old stump fence with a new locked wire fence which a pig can only get through when it is made into sausages? How can you expect them to adopt the latest improvements when your own store is an advertisement for everything that is out-of-date?

No investment which improves the store and facilitates waiting on the trade is excessive. When you lose fifteen minutes looking for some articles which you know you have in stock, you not only lose a quarter of an hour yourself, but you annoy the customer. Get a reputation not only for promptness of delivery but for promptness and celerity in waiting on customers. We live in a busy age and men will deal where they get the quickest service.

Goods well displayed are half sold. For a hundred dollars or so you can put in the latest system of shelving on the market. It will be attractive and will often suggest to customers some article which they had not thought of buying.

Three millionaires exist in royal splendor in Los Angeles, California, in consequence of having transformed a sun-scorched, barren, desolate, lonely wind-swept desert island into a popular watering place. An island that was once exchanged for a saddle horse is today worth $70,000,000 because three men undertook to make it an attractive place for tourists. Make your store attractive and people will flock to it.

A veteran hardware merchant at a recent convention remarked that 80 per cent of the men who failed in business failed because they did not know how to display their goods to advantage and often made what should have been an attractive store look like a second-hand junk shop.

Don't be one of the 80 per cent., and don't run a junk shop instead of a twentieth century hardware store.

METRIC SYSTEM STILL FAR OFF.

A correspondent draws attention to the following clipping from the London Times of March 9, 1906, containing House of Commons report, March 8, to show that Great Britain is not likely to adopt the metric system in the immediate future:

"In reply to Mr. Norman (Wolverhampton), Sir H. Campbell-Bannerman said he could make no promise for the passing this session of a bill to make compulsory after a lapse of two years the use of the metric system of weights and measures. Such a bill if it became law would necessarily render illegal the use of existing weights and measures, and he did not think there was any ground for anticipating that such a measure would be noncontentious. (Hear, hear)."

Those gentlemen who have taken upon themselves the task of agitating in favor of the adoption of a decimal system of weights, measures and coinage throughout the Empire, have not permitted hard and constant work to damp their ardor.

Their latest crusade takes the form of a pamphlet entitled "Reasons why the metric weights and measures should be made compulsory throughout the British Empire." It deals with the subject in a concise but forceful and exhaustive manner, and emphasizes with clearness the need of a less complicated method of calculation than at present obtains in the Mother Country. In the new English House of Commons the agitation has many supporters, and an earnest effort will be made to pass a bill similar to the one which the House of Lords passed unanimously in 1904.

Explanatory literature may be had from the Decimal Association, Oxford Court, London, E.C., England.

THE POSITION OF TIN.

For weeks past the attention of all who are interested in the metal markets has been riveted on tin. Always one of the most erratic of metals, it has in a very short time risen from a position of comparative weakness to the highest price ever touched by it. Even within a very few days that feat was accomplished, for while on April 2 the price on the London market was £169 15s. per ton, quotations on April 10 had reached the astounding figure of £176—just £6 higher than the price reached in January, 1888, which had, hitherto, constituted the record.

In the present instance, the world's visible supply appears to have been fairly cornered by London operators. Speculators there practically control all the spot and April tin, and the natural result is seen in the high prices now ruling. But this speculation is not the only explanation for present conditions, or prices could not long be maintained, but apart from the prejudiced statements of bulls and bears, it is the honest opinion of many metal experts that these high prices are the result just as much of natural as of artificial causes.

As a matter of fact, there now exists an actual scarcity in the world's supply. Nor are there any large concealed stocks in the hands of producers or consumers. The visible supply has decreased about 3,000 tons during the past year, so that in the face of this fact and of the ever-increasing consumption of the metal, it is hard to see how the pressure will be relieved even admitting claims that Banka sales will be increased 100 tons and those of Billiton from 50 to 100 tons monthly; that China is now importing tin in larger quantities; that Bolivia is trying hard to increase her output, and that the Chinese are withholding supplies in the Straits, to the extent of 2,500 to 3,000 tons.

That consumption is increasing rapidly cannot be gainsaid, for the uses of tin are manifold. Even though the proportion utilized for coating tin plates and making solder is falling off, the quantities used by railways, and for babbit metal, type metal, Britannia ware, and

kindred products, are growing in far greater ratio, and there are even those who assert that the increasing discrepancy between output and consumption will result in producers being compelled to take up deep mining. Under these circumstances it will be seen that it could scarcely have been the work of speculators alone which, within a single year, forced up prices £30 per ton in London and 10 cents per pound in New York.

It will be interesting to compare the present situation with that which existed in January, 1888, when the highest previous figure was reached. On that occasion the famous Secretan Syndicate attempted to corner the market in both tin and copper. For a time things went well, and tin was quoted as high as £170 in London, and 37 cents in New York. But fierce opposition was aroused among consumers, many of whom brought out extensive supplies which had been concealed, and threw them on the market in an effort to break the corner. Finally the copper boom went flat, and the syndicate found themselves unable to support the tin corner. An utter collapse followed, and inside of a few days the price was forced down to £106, finally reaching before the end of the year the low figure of £75.

It will be seen that the two situations bear no very close analogy. When it is added that producers in the east are now getting no more for their tin than they were a year ago, owing to higher exchange, higher wages for coolies and a general increase in the cost of production, an immediate collapse will seem neither probable nor possible.

ITALY AS A MARKET FOR CANADIAN PRODUCTS

Few people in Canada realize what a change has come over Italy in the last few years. Most of us know that country from our ancient histories and from the hard working, but ignorant and excitable navvies who build our railways and work on our big contracts. From a number of small kingdoms, Italy has developed into a strong united nation, apparently determined to get and hold a leading place in the commercial world. They are now endeavoring to open new channels for trade by the appointment of commercial agents.

Some time ago the arrival of Marquis Doria, who was sent to Canada to see whether trade between this country and Italy could not be developed, was recorded in these columns. During the last few weeks the marquis has seen many Canadians — leading representatives of the political and commercial life of the country—and has opened our eyes to the possibilities for a really valuable exchange of products and has suggested the advisability of the encouragement of a direct steamship line between Mediterranean ports and Canada.

It would open a most valuable part of Europe for Canadian trade. Such a line would be of much more importance to Canada than even our Australian, Mexican or South African routes, because we could place our farm products and many of our manufactures in a short time right among an immense consuming population. Such a line would open a market for Canadian shippers and importers, a district not now touched by Canada at all, Southern France, Switzerland, Northern Italy and Austria, and all these countries are just beginning to take an interest in Canada. Switzerland has been importing cattle from Canada and one Canadian cattle exporter has informed us that he could guarantee 500 head of cattle a month for the Swiss trade alone. Switzerland has of late years been importing on an average about 44,000 head of cattle per annum. Argentine Republic is trying to get that trade. Austrian and Italian manufacturers, particularly the former, have awakened to the opportunities of the Canadian market given them over their arrivals in Germany, who are handicapped by a surtax, and during the last two years there has been a very large increase in the shipment of Austrian goods in this country.

Perhaps the most important development from such a line would be to get us a class of emigrant we unfortunately have had very few of in this country. Natives of Northern Italy are nearly all successful farmers, nearly 2,000,000 of them having settled in Argentina, and are competing strongly with Canada in the European market for farm products. They are an intelligent class of farmers and 90 per cent. of them can read and write and have a fairly good education. They are industrious, economical and good citizens.

If Canada is to take advantage of trade opportunities with Italy and other countries on the Mediterranean, it is imperatively necessary that a line of steamers should run regularly between this country and ports on that sea. There are no less than 14 lines of steamers running between Italian ports and the United States, while between South American ports and Italy there are five lines. It is obviously time, therefore, that Canada made some effort to inaugurate a direct service. Besides attracting trade a direct line of steamers to a Canadian port would naturally be used by travelers and immigrants from Italy who were desirous of reaching the Western States.

Italy is a country which, while producing a great many things that this country requires, is also a large importing country. She imports about $12,000,000 worth of machinery, to say nothing of about 5,000 tons of agricultural implements, from plows to reapers. The imports of lumber aggregate about $13,000,000; of coal, 5,000,000 tons; of wood pulp, 30,000 tons. Large quantities of dried fish are also imported by Italy, so that in this article of merchandise alone a direct line of steamships would prove beneficial to a staple Canadian industry which is not at the present time in a flourishing condition. Another Canadian industry which would be benefited by a direct line would be the wheat industry. Italy imports on an average of about 30,000,000 bushels per annum. Last year she imported over 40,000,000 bushels.

Our trade with France would also naturally be benefited by a line of steamships such as that advocated, for it would doubtless touch at French ports in the Mediterranean as well as at Italian ports, and as every business man is aware, many of the French products which are well known in this country are produced in Southern France.

Canada is likely to have a creditable display of her products at the Milan exhibition which is to be opened about the end of April. If this exhibition is followed up by the inauguration of a steamship line between Italy and Canada, as well as by other businesslike efforts, this country should benefit a great deal from the exhibition. Otherwise, whatever benefit the exhibition might be to Canadian products is likely to be greatly minimized.

BE PROMPT AND FAITHFUL.

One of the most common failings in the business man of to-day—perhaps the most common—is his lack of promptness in action and faithfulness to his promise. The two things really go together; where you find one failing you are sure to find the other.

Quite recently the writer knew of a young man who had been promoted over the heads of older servants, on account of manifest ability, but he did not hold

the new post six months—simply would not be prompt.

Another instance is of a large manufacturing firm, the manager of which will readily promise a date for delivery without giving careful thought to its possibility of fulfilment, and just as easily break that promise. On one occasion this ready promise cost the company a good deal of loss. A firm for whom they were making a special article for Summer use, was so distracted by the many disappointments that they at last made them carry the goods over for another season, thus locking up a large amount of capital.

Promptness in keeping promises or in turning out work of any kind plus thoroughness in following work up and following it through to the very end is a combination hard to beat (and hard to find. With a proper use of the desk tickler it is possible to work out such a combination most satisfactorily. This is the method advised by System :

Make a tickler slip for every promise given, file it far enough ahead of the date of promise to enable you to get started in ample time. When the time to start comes, start—"do it now." Don't put it off. If the work is something that demands your attention from day to day, or at frequent intervals, keep your tickler slip running ahead in your file to come up and jog your memory. If the completeness of the work depends upon several details, list these details on the slip, so that your attention will be called to each one and nothing overlooked.

If the slip covers work to which you alone are giving attention, it is simply a matter of keeping faith with yourself until the work is finished; if it is something you have turned over to others the slip should come up with about the same regularity, in order that you may thoroughly and tactfully follow it up to the end and keep in touch with the details. Always file a tickler covering work turned over to others at a date that will give you time to catch and rectify any mistakes, or to get things moving fast if they have been neglected or forgotten since they were first turned over. Make those under you or around you to whom you give out work keep your promises and act as promptly as you would yourself. There is nothing like the follow-up tickler to accomplish that.

Never make a promise that you cannot reasonably keep, and when you have once made it, live up to it. If unforeseen and unavoidable conditions arise to upset your plans, be careful to advise the one to whom the promise was made and give him a new promise. Always do this before he has had a chance to make any inquiries of you.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 23.

SUCCESSFUL JOBBERS AND SALESMEN.

From 1873 to 1906 is a long call, and yet it denotes the length of service on the road of Mr. Robt. Johnson, Sherwin-Williams Co.'s veteran traveler.

Sent out in the early part of 1873 to do some outside work for E. Atwater & Co., Mr. Johnson succeeded so well that he was kept on the road until 1879, when his firm retired from business, selling out to McDougall, Logie & Co. He then joined the traveling staff of S. H. May & Co., whom he left at the end of a year to go with Ramsay, Drake & Dods. When Mr. Peter Dods retired

Robert Johnson,
Representing the Sherwin-Williams Company in the Cities of Quebec and Ottawa and Western Quebec Provinces,

from this company to start in business for himself, Mr. Johnson went with him, and remained until 1889, when he made an arrangement with W. H. Cottingham, the present general manager and vice-president of the Sherwin-Williams Co.

In the early days Mr. Johnson's work took him all over the Dominion. His trips generally lasted half a year, and the accommodations were pretty rough compared with the present. No young men were at that time selling goods on the road, nearly all the travelers being middle-aged men. And it was hard and discouraging work in the years 1875-'78 when, assisted by the difference between American money and gold (which was considerable) and by a tariff of only 17½ per cent., the drummer from the southern side of the boundary just came in and took what he wanted, leaving the short end of it to the Canadian firms. But those days, though full of the struggle for existence, were the days upon which this country was built, and the houses then doing business in Montreal were a strong lot. Men who were at all worthy were carried by their firms through thick and thin, with the result that loyalty to "the house" was everywhere present and always sincere.

Mr. Johnson tells many an interesting story of his earlier experiences. In those days there was no trade paper such as Hardware and Metal, and the Witness was looked upon as the most reliable price medium. A most peculiar feature, too, was that retailers rarely settled by note or draft at that time. Mr. Johnson says that he frequently came in after a trip with customers who had grips filled with money. They would go about settling their bills, from paint to hardware, grocery and dry goods houses, and then they would start in to buy. A great many came to the market then to do their buying, whereas none come now.

There are now but few men left of the old-time "Kings of the Trade," and it is a great pleasure for these pioneers to look back at the early struggles and privations they experienced. To all of these the likeness of "Bob" Johnson here given will bring back many recollections of the good old days.

ONTARIO GIVING UP TO THE WEST.

How the west is drawing on Ontario or sections of it for settlers is shown by the statement of a grocery traveler to the Hardware this week, that between Palmerston and Southampton, a distance of 53 miles, 50 cars of settlers and settlers' effects had gone west in one week, and from Grand Valley 25 cars of settlers and their effects had gone to the great wheat country. A merchant had told him that he believed there were 25 per cent. fewer consumers in Huron and Bruce than there were ten years ago.

"The Indians in the west," said the traveler, "used to say, 'Bruce must be a big place, because everybody comes from there.' Like in Bruce," continued the traveler, "you can't make a mistake by addressing a man as Mac."

The traveler stated that farms were larger than they used to be, but considerable areas had been put into pasture for grazing purposes. The young folk have gone west and the old people get a hired man and raise stock.

HARDWARE TRADE GOSSIP

Quebec.

Hogue & Fils, have registered as plumbers in Montreal.

N. A. Young, of Calumet, was in Montreal on business during the week.

E. J. Dever, general merchant, of Dalhousie Station, took a trip to Montreal during the week.

Joseph Warren, general merchant, of Pointe a Pic, visited the Montreal wholesale trade this week.

Mr. Haskill, of the Haskill Lumber Company, Fassette, visited Montreal a few days ago to place orders for supplies.

W. S. Leslie, of A. C. Leslie & Co., metal merchants, Montreal, returned to the city on Monday after a trip to New York.

Wm. McNally, of Wm. McNally & Co., dealers in contractors' supplies, Montreal, has returned from a trip to New York.

Mr. Morgan, of E. M. Lapierre, hardware merchant, Buckingham, was a caller on some of the jobbers in Montreal this week.

The hardware section of the Montreal branch of the Retail Merchants' Association of Canada held a meeting last Monday evening.

J. Lochead, formerly a partner in the Coulonge Hardware Company, of Fort Coulonge, has gone into business with his father at Forest, Ont.

Amiot, Lecours & Lariviere, Montreal, are installing in their fine St. Catherine street store an electric plant to develop power for their own lights, etc.

R. E. T. Pringle & Co., Montreal, are extending their premises on Victoria Square, taking in the building formerly occupied by the American Tank & Power Co.

Francis Reynolds, manager of the Montreal branch of Wilkinson, Heywood & Clarke, paint and varnish manufacturers, has returned from a brief business trip.

Ontario.

L. Grill, Hespeler, is now nicely settled in his new hardware store at Hespeler.

Harry Clucas, Toronto manager for the Canada Paint Co., was in Barrie during the week.

Fred Hawes, of Georgetown, has purchased the hardware stock of Zilliax & Sarves at Listowel.

Thomas Hodgson, Toronto manager of the Dominion Wire Manufacturing Co., was in Montreal during the early part of the week.

W. Duncan, who has been representing the Kemp Manufacturing Co. in Toronto, is now traveling in Western Ontario for that company.

Quite a number of out-of-town buyers visited Toronto on Tuesday to attend an auction sale of enamelware seconds from the Kemp and McClary factories.

Prince & Co., hardware merchants, Toronto, have removed from 805 Bathurst street to larger quarters at 550 Bloor street west, a few doors east of Bathurst.

G. A. Binns, hardware merchant, Newmarket, has sold the tinsmithing department of his business to Messrs. R. Osborne & Son, who have been employes of Mr. Binns for the past thirteen years.

Hugh Labatt, formerly secretary of the Canada Brass & Supply Company, London, is now also acting as manager and Mr. Sutton, formerly of the Canada Foundry Company, is now in charge of the manufacturing end of the business.

Zilliax & Sarves, Listowel, have decided to retire and have sold out their business to F. Howes, of Georgetown, late of the firm of Anthony & Howes, of that town. Mr. Howes is already in possession, and intends removing his family to Listowel at once.

C. M. Cutts & Co., Toronto Junction, have moved into their fine new store, but it will be a month before they will be completely settled and will have all their fittings installed. This will be one of the most modern stores in Ontario and an interesting description of its arrangement will be published when the stock is in shape.

The Whitten-Drummond Co., Toronto, are enlarging their tinshop capacity. The new shop, which will occupy the whole of the top flat, is 22 by 80 feet and was formerly used as a storehouse. An elevator will be put in and other improvements are being made. The Whitten-Drummond Co. make a specialty of dairy supplies, but do an extensive general sheet metal business as well.

Maritime Provinces.

R. Maher will open a tinsmithing store in St. John, N.B.

Western Canada.

C. D. Waldon, sales manager of the Pease-Waldon Co., returned to Winnipeg last week from a successful business trip in the west. After a few days' stay in town he went west again after business.

The Hunter Smith Hardware Co., of Brandon, who have sold out to Harold Kelley, formerly connected with the firm of Brown & Mitchell, Brandon, will be known in future as the Kelley Hardware Co.

G. B. Grandy, of the Winnipeg staff of the Gurney Foundry Co., has resigned his position and is now chief clerk in the office of the general superintendent of maintenance and operation of the Bell Telephone Co. in Winnipeg.

C. Fox, who recently resigned his position as buyer for J. O. Cadham, Portage La Prairie, left last week for Vancouver, where he will commence business as a manufacturers' agent. Mr. Fox has been succeeded by J. Pethick, of Winnipeg.

Chas. S. Archibald, of the Nicholson File Co., Port Hope, was in Winnipeg last week in the interests of his firm and called at the office of Hardware and Metal. Late in the week he left Winnipeg for the Pacific coast. For some years Mr. Archibald has been connected with the Maritime Nail Co. and Portland Rolling Mills, and it is only recently that he has transferred to the Nicholson File Co.

CONSOLIDATED'S NEW PREMISES.

The Consolidated Plate Glass Company are moving into their new quarters at 30 St. Sulpice street, Montreal, the building having been formerly occupied by Lewis Bros., and having 30,000 square feet of floor space. They have torn out all the old flooring and a new elevator has been installed for carrying heavy loads. When the Consolidated was organized it was in affiliation with the A. Ramsay & Son Company, under whose management it was conducted. Both of these companies have grown to such proportions of late, however, that a severance of the connection was found advisable, so that hereafter they will carry on business as individual firms. Considerable machinery, including a 20 horse-power motor, is being installed in the top flat of the building, which will be used for manufacturing purposes.

A GOOD YEAR REPORTED.

The stockholders of the Toronto Silver Plate Company held their annual meeting at Toronto on April 5, and re-elected as directors: W. H. Beatty, A. L. Gooderham, W. H. Partridge, H. W. Beatty, Wm. Thomson, James Webster, Frank Turner, C.E., E. G. Gooderham and J. Gordon Macdonald, the latter being a valuable addition to the directorate. At a subsequent meeting of the board W. H. Beatty was re-elected president and W. H. Partridge vice-president. The company report business for the new year as very satisfactory indeed and that they have a great many orders ahead of them. E. G. Gooderham continues general manager and secretary-treasurer.

PRACTICAL PHILOSOPHY.

Pull never had a show as against brains.

Self-confidence is a genuine business asset.

Applause has made fools of more men than criticism.

A steady average is better than an occasional exception.

A pessimist is one who can see only the hole in the doughnut.

Man wants but little here below—and that's about all he gets.

There is in the worst of fortune the best of chances for a happy change.

More time may be lost by labor on Sunday than by loafing all the week.

It is just as easy to find fault with an electric light as with a tallow candle.

Many a man doesn't know what he is talking about until after it is too late.

Some men know nothing, and know it and say nothing. Others know nothing and cannot keep from telling it.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Brass Shoe Rivets are quoted at 15 per cent. discount.

Clinch Point Shoe Rivets show an advance to 15 per cent. discount.

Building Paper—Several lines are changed.

Ingot Tin—Market still rising. Ruling price 42c. to 42½c.

Turpentine has declined 3c.

Gasoline and Benzine have advanced.

Binder Twine—New lists are now in the hands of the trade.

TORONTO.

Sand, Emery and Garnet Paper—New lists have been issued showing an advance of 10 per cent. Discounts are unchanged.

Antimony—Another 1c. advance has been made.

Bar Iron—Last week's advance has not been held to.

Linseed Oil—Quotations are 1c. higher.

Turpentine—Prices have declined considerably.

Compression Work—Discounts are now 60 per cent. off list.

Fuller Work—Seventy per cent. off list is now quoted.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 13, 1906.

Sales this week are very large in all classes of Spring goods, notably lawn mowers, green wire cloth, screen doors, screen hinges, and all kitchen and household goods. Trade in building hardware is also keeping up remarkably well, with orders pouring in from all parts of the country, showing that building activity is general. Other goods that are being sold in large quantities by the jobbers here at present include plated ware and cutlery, for which the season's demand is just beginning.

Very few price changes of any account have eventuated during the week, the most important being advances in shoe rivets. On brass shoe rivets the discount is now 15 per cent. off list, while on clinch-point shoe rivets the discount is the same. Some changes have taken place in building paper quotations, these showing generally a slight weakening in value. The new building paper quotations hold good only for Ottawa, Quebec Province and the Maritime Provinces. In Ontario the price is open.

AXES—Our prices are as follows: $7.60 to $9.50 per doz.; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—We are quoting: $4.25 for cold blast.

RIVETS AND BURRS—Orders continue to be very satisfactory. The market is very steady at the following quotations: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists: copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Sales are not large but conditions for the most part are seasonable. We quote as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS — The market has remained without feature since the recent advance in price. Prices are being steadily adhered to, and we are still quoting the following discounts: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Conditions remain much the same from week to week, but are very satisfactory. We are quoting as follows: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSENAILS — Considerable activity is displayed in all the various grades. Prices are still held as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—There is no slackness shown in the steady demand for these goods. The price remains: $2.15 per keg f.o.b. Montreal.

CUT NAILS — Trade continues featureless. Our prices remain: $2.20 per keg f.o.b. Montreal.

HORSESHOES — The mills report large orders and a steady market. Our quotations are as follows: P.B. new pattern, base price, $3.50 per 100 pounds.; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Orders are still rather slow, and no line can be said to have developed any particular sale as yet.

BUILDING PAPER—Business is still improving with every week. As forecasted in our last report, manufacturers have issued new lists, which show changes in some of the prominent lines. These include carpet felt, which has been advanced to $55 per ton. Dry sheathing shows a falling off of 5c., and is now quoted at 35c., while tar sheathing has similarly declined to 45c.

CEMENT AND FIRE BRICK — The demand for cement is beginning to be felt and jobbers report that enquiries for the better grades are larger than ever this year. There is a disposition to expect higher prices in the near future, especially if the coal strike in the United States assumes serious proportions, for fuel is an important item in the production cost of cement. Fire brick and fire clay are selling in big quantities. We quote: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We quote the following: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—This continues to be one of the active lines of the present market. Our prices remain as follows: American Twin, 2 qt. 12.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Orders continue to be very numerous and extend over a large territory. The price remains $1.45 per hundred sq. ft.

BINDER TWINE—Conditions are unchanged, and we are still unable to give prices.

RAW FURS—Prices to dealers are as follows:

		No. 1.	No. 2.	No. 3.	No. 4.
Bear	Black	$12 00	$8 00	$4 00	$1 00
"	Yearlings	7 00	5 00	2 00	0 30

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, April 13, 1906.

There has been considerable cutting on wire nails of late in spite of the firmness in price of raw material, by dealers who have bought on old contracts.

All lines of sand paper and cloth, garnet paper and cloth, and emery paper and cloth have been advanced 10 per cent., this advance coming into effect on Tuesday last. The discounts remain as before, but new lists have been issued.

Glass has been subject to considerable cutting during the past few weeks. At first the cutting was quietly done, but during the last week competing houses have lowered prices greatly. Reports have it that this cutting was started by putting on the market 8,000 cases that were taken from the S.S. Virginian after she had run aground. We learn, however, that most of this stock was bought up by small dealers at auction, and did not get into the hands of jobbers. Large stocks in some quarters are said to be largely responsible for the cutting.

There have been rumors that flatware would advance, but silverware manufacturers say they are trying to avoid it.

On all sides business is reported good. The opening of navigation has stimulated it, and everyone is well satisfied with the trade that is being done.

AXES AND HANDLES—Ordinary amount of business being done. Prices remain firm.

CUTLERY AND SILVERWARE—A marked improvement is shown in these lines. Rumors of an advance on flatware are current.

SPORTING GOODS — The sporting goods trade is opening up well, and a good Summer is looked for.

WASHING MACHINES—Trade is fairly active at present.

CHAIN — We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING—Prices are firm and a good business is being done.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—An active demand is experienced. Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS — Considerable cutting has been done of late, but a large business is being done.

CUT NAILS—This line also shows greater sales.

HORSENAILS — Business continues good with prices unchanged.

HORSE SHOES—The Spring has ushered in a good trade. Market firm. We still quote. P.B. base, $3.65: "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes 1 to 4, $7.00. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—The usual amount of business is being done.

RIVETS AND BURRS—Some good sales are reported. Business steady.

SCREWS—A good business is being done in screws now that the building season has opened.

BOLTS AND NUTS—Prices are firm, business good.

CORDAGE—We now quote as follows: On binder twine, 500 feet, 10c. lb.: 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13c. lb. Golden Crown, 500 feet, 9 3-4c. lb. On Gold Medal Brand (imported), 600 feet, 12 1-4c.; 650 feet, 13 1-4c. Discount for car lots. Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

CEMENT—The cement demand increases and prices are firm. A slight advance is not improbable. We are quoting as follows: For carload orders, f.o.b., Toronto, Canadian Portland, $2.00. For small orders ex warehouse, Canadian Portland, $2.15 upwards.

FIREBRICK—There are no changes to record, but prices are very firm. English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27½c. to 35c.

BUILDING PAPER—Business is active in all lines. No further changes since last week.

HIDES—The supply continues very light and prices are firm with some advances, No. 1 country calf skins being 13c., and sheep skins are quoted 5c. to 10c. higher. A little new wool is coming in. Fur prices are easier in spots.

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 13, 1906.

The tone of the metal market is still high, with very few exceptions. Nor is it probable that the advent of Summer rates make any material difference, as advancing prices on so many metals will not permit jobbers to replenish their stock at anything like the prices ruling when they bought up for the Winter trade.

Ingot tin continues to soar, and there seems no end to the rising market. Prices this week are higher than for a long time back, but even at that metal merchants say that they will be compelled to boost them still higher, if foreign markets continue to advance. This metal is easily the feature of the market.

If there was any antimony to be had on the market there would be considerable activity in that metal, but, as it is, dealers find it all but impossible to secure deliveries, even at the record price now ruling. Some idea of the antimony situation may be had from the fact that, while seven cents was considered a nominal price a year ago, it is now quoted at nineteen.

Pig iron conditions are unchanged. Rush sales are still from stock, but inquiries are now chiefly for import. Navigation will soon be open, and prices will then be changed to suit Summer conditions.

CANADA PLATES—Some merchants have advanced quotations on galvanized plates. This has not been general, however, and we are still quoting as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

COPPER—This metal remains very firm. The supply is scarce, and higher prices are expected soon. We still quote: Ingot copper, 20 1-2c. to 21c.; sheet copper, base size, 25c.

INGOT TIN—Another sharp advance has been declared this week. The market is very high, with still an upward tendency. The prices we quote are for medium sized orders, but, for quantities, jobbers are dealing with inquiries on their merits. Our price now is from 42c. to 42 1-2c.

PIG LEAD—Fluctuations are still in order, but there is always the tendency to come back to the old price. During the past week, several changes have been made in quotations, but, at time of writing, we are still able to give prices as $4.40 to $4.50 per hundred pounds.

PIG IRON—Quotations are still for orders from stock. Inquiries are fair. We quote:

"Dom.," No. 1	$19.50 to $20.00	delivered	Montreal.
Usual difference in price for lower grades			
Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18 00	"	"
Londonderry	20.50	"	"
Carron No. 1	24.00	"	"
" (special)	23.00	"	"
" No. 3 (soft)	22 75	"	"
Summerlee No. 1	25.00	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.50	"	"

BOILER TUBES—Our prices: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Con-

queror, 7 1-2c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL — We are still quoting as follows: Sleigh shoe, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards: square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Our prices are as follows: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78: 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Ruling prices are as follows: Queen's Head, 28 gauge, $4.35; 26 gauge, $4.10; 22 to 24 gauge, $3.85; 16 to 20 gauge, $3.60; Apollo, 28 gauge, $4.20: 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Comet, 28 gauge, $4.15 to $4.45; 26 gauge, $3.90; 22 and 24 gauge, $3.60; 16 to 20 gauge, $3.45; Bell brand, 28 gauge, $4.30 to $4.35; Fleur-de-Lis, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; in less than case lots, 25c. extra.

BLACK SHEETS—Our prices remain as follows: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

ANTIMONY—Prices have risen so high that jobbers are now afraid to touch the metal. The stock on hand here is almost nil. We quote 19c. to 19 1-2c. for Hallett's.

TIN PLATES—In these goods also, some dealers have advanced their figures, but the following prices are still obtainable: Cokes, base size, 1C 14 x 20, $4.00; charcoal, base size, 1C 14 x 20, $4.25.

TERNE PLATES—Dealers are again quoting quite generally $6.85.

INGOT ZINC—The market is quiet. Very little is being sold, and prices remain 6 3-4c. to 7c.

SHEET ZINC—We still quote: $7.50 in casks; $7.75 in less than casks.

SHEET LEAD—Our prices: 2 1-2 lbs., 5 1-2c. by the roll; 3 lbs. and heavier, 5 1-4c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON—Local jobbers are still quoting $2.05 f.o.b. Montreal.

OLD MATERIAL — Our quotations are as follows: Copper wire, 15c.; light copper, 14c.; heavy red brass, 13 1-2c.; yellow brass, 10c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13.50; wrought scrap, $12; stove plate scrap, $11; mixed rags, 90c. to $1 per 100 lbs.; old rubbers, 7¼c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto April 13, 1906.

Ingot metals still continue to be the centre of interest in the markets, trade being quite brisk even at the high prices ruling. Ingot tin is unchanged in price in spite of reports of high prices elsewhere and the demand for both ingot tin and plates is active. Lead and copper are unchanged and in about the same position as a week ago, while antimony is soaring even higher and is quoted at 21 cents, an advance of one cent. Some small supplies have been received to relieve the market.

Bar iron has not held the advance made a week ago, but as stocks are scarce and mills too busy to pay attention to any special orders, prices asked vary considerably. Bar iron in the States is a little easier than here. Pig iron is in the same position as a week ago. It is said that the iron and steel interests in Great Britain are beginning to feel the effects of the depression in the Old Land, and if so this may tend to weaken conditions but as yet this is only speculative.

PIG IRON — Orders are fair and prices very firm.

Radnor, at furnace		30 00
Londonderry, f.o.b. Toronto, No. 1		22 00
" " " No. 2		21 50

BAR IRON—Last week's advance has not been held to by all dealers and we are now quoting $2.10 to $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—In spite of record prices being asked elsewhere, the effect has not been felt here other than to increase the demand. We still quote: 40c. per lb.

TIN PLATES — Demand keeps up satisfactorily and the market is very strong.

GALVANIZED SHEETS — A better demand exists and prices continue the same.

BRASS—A probable scarcity of copper, together with the higher prices now ruling, makes brass firm and strong.

BOILER PLATES AND TUBES—The demand is reported steady, and we quote as follows: Plates per 100 lbs., $2.20; heads, per 100 lbs., $2.45; tubes, per 100 feet, 1 1-2 inch, $8.50; 2, $8.70; 2 1-2, $10.50; 3, $11.80; 3 1-2, $15.80; 4, $20.00. Terms, 2 per cent off.

LEAD—The market is very firm and many dealers look for higher prices. We still quote: Canadian pig lead at $4.40 and English pig at $4.65 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—The market is very active, the demand being strong and prices firm. We still quote as follows: 7 1-4c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

COPPER—A stronger demand is evident and prices are held strongly. We still quote as follows: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

ANTIMONY—Small stocks have been received but owing to the scarcity and the active demand prices have been advanced to 21c.

OLD MATERIAL—Scrap iron is the most active line, the high prices deterring business in other lines. Dealers' buying prices continue as follows: Heavy copper and wire, 15c. per lb.; light copper, 13 3-4c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $10 to $10.50, No. 2 wrought $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel $5; old rubbers, 7 1-4c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—All kinds of high prices are still being asked for soft coal. The quotations below, therefore, are merely nominal. Prices are unchanged.

Anthracite in cars at bridges, egg, stove and nut, $5.50; grate, $5.25; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; 3-4 inch, $1.40, run of mine, $1.30, nut, $1.25; N.P. and S., $1.00; slack, 75c.; box cars 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.60; 3-4 inch, $2.50; mine run, $2.40; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, April 11, 1906.

PIG IRON—Cleveland warrants are quoted at 47s. 10d. and Glasgow standard warrants at 47s. 10d, making prices as compared with last week 6d lower for Cleveland warrants and 6d lower for standard warrants.

TIN—Spot tin opened strong at £176 5s., futures at £171 15s., and after sales of 250 tons of spot and 280 tons of futures closed easy at £176 for spot, £171 7s. 6d for futures, making price compared with last week £4 5s. higher on spot and £2 9s. 6d higher on futures.

COPPER — Spot copper opened firm at £84 15s., futures £81 15s., and after sales of 200 tons of spot and 50 tons of futures, closed firm at £84 17s. 6d for spot, and £81 10s. for futures, making price as compared with last week 12s. 6d lower on spot, and 15s. lower on futures.

SPELTER — The market closed at £25 10s., making price as compared with last week 7s. 6d higher.

LEAD—The market closed at £15 15s., making price as compared with last week 2s. 6d higher.

New Brunswick Trade News

St. John, N.B., April 8, 1906.

The characteristic feature of the hardware market of late has been its steadiness. Prices have varied but little and continue firm generally. Business has been good on the whole and there is

reason to look for a continuance of this satisfactory state of affairs.

One metal which showed a slight variation in quotations is pig lead. For a short time it showed a decline, but soon the price stiffened again and pig lead figures are in the "firm" column again.

The outlook so far as glass is concerned is marked by some considerable uncertainty. The quantity of glass coming is small and no large increase is expected in the near future. But it is a matter of difficulty to get thorough information regarding this commodity, largely because of labor troubles across the water.

* * *

Messrs. Fleming, of the Phoenix foundry here, have entered upon the preliminary stages in the manufacturing of gasoline engines. They claim, and speaking offhand, their claim is a good one, that they are the first Maritime Province firm to take up the manufacture of these engines.

Messrs. Fleming have secured the Canadian rights for the manufacture of the Essex style of engine and in a short time they will be in a position to show the public one of the engines made in their own foundry in operation. In point of power the engines will range from two and a half horse power upwards. It is expected that those of medium power will find favor with fishermen for use in salmon boats. Messrs. Fleming by the way, employ over 100 hands and one member of the firm recently stated that there has not been a slack time at the foundry for eight years.

* * *

Another foundry where all is activity is the Enterprise Stove Foundry, situated at Sackville. The business done at this establishment is increasing so rapidly and to such an extent that an addition to the warehouse space and the erection of a new office building have come to be among the immediate necessities. Plans for the new structures are now being prepared by Mr. H. H. Mott and it is expected that July will see the new buildings occupied by the employes of the foundry. The office building will be one of two storeys, 40 x 35 feet in dimension. The addition to the warehouse will be 160 x 40 feet in dimension and of three storeys.

* * *

The quarterly meeting of the Maritime Hardware Association was held here last week. Messrs. John McAvity, John Keeffe, D. C. Lee, H. M. Coates, St. John; E. K. Spinney, Yarmouth, and N. Robertson, jr., W. H. Stearns and M. O. Crowell, Halifax, were in attendance. The statement given out was that the business done at the session was purely routine in character.

J. A. Black has resigned his position as manager of the Maritime Heating Co., Amherst. He has been succeeded by John A. Laws.

J. Wesley Doull, of Sackville, has recently invented a rail cutter and lifting jack.

W. H. Thorne, the local merchant, has been enjoying an extended trip to Mexico.

A. M. Rowan, the north end hardwareman, is one of the candidates for a seat at the civic board this year.

British Columbia Trade News

Power development on the Pacific Coast is reaching the acme of activity. In British Columbia the first installation of power to be seriously considered, that of the Vancouver Power Co., with a possible development of 30,000 horse-power, was completed and put in full commission, with about one-third of the full capacity, last year. Now, with rumors of electric lines from Seattle to Vancouver, with proposals to electrify the Great Northern between here and the Sound City, and similar proposals for coast sections of the C.P.R., it is not surprising to hear of moves to acquire and develop hitherto unused water powers in the coast district. The last project of any importance, and the largest yet on the coast, is to use the Lillooet River and Lakes, an application having been made for water record of 25,000 miners inches to the water commissioner by Messrs. Hermon & Burwell, consulting engineers, on behalf of yet un-named clients. It is presumed that the Vancouver Power Co., for whom Hermon & Burwell are engineers, are behind the project. The use to which the proposed power is to be applied is yet to be definitely announced, though all the projected railway changes would indicate the possible direction to which it will be turned.

The Burrard Power Company, which is the name under which record is asked, expects, by making a reservoir of the Lillooet Lakes, to be able to develop fully 50,000 horse-power. It is stated that work will go ahead at an early date, or as soon as preliminaries are settled.

* * *

Following the recent qualifying examinations demanded of plumbers, both masters and journeymen, by the city council of Vancouver, that body has made changes in the license demanded, so that now every qualified plumber must pay a license fee, and not, as heretofore the case, one license for each shop. As the master plumbers would doubtless have to pay the fees, they are preparing to ask the city council to revert to the former method, and will probably offer to pay a license fee of $50 per shop, instead of the present fee of $10 per man.

* * *

A proposal to establish a glass factory at Eburne, a suburb of Vancouver, on the North Arm of the Fraser River, is taking shape. An expert in the manufacture of glass is now on the way here from England, retained by the promoters of the scheme. At present fruit jars, lamp glasses, bottles, etc., will be turned out, and later, after a start has been made, it is intended to go into the manufacture of sheet glass.

* * *

Enderby and Armstrong, two thriving towns in the Okanagan Valley, on the line of the Shuswap & Okanagan Railway, are to have electric light plants installed this year. Companies have been formed at each place and engineers engaged to report on the projects. At Enderby the Kamloops Lumber Co. is to furnish the power, while at Armstrong the intention is to utilize water power.

* * *

Vancouver City Council is to spend $6,000 in buying water meters to place on the pipe lines of all users except residences. It is found that some disproportionate rates are paid, and to make it nearer the fair thing for all for other than domestic purposes, meters are to be put on. Hitherto practically the only concerns having meters on their mains were the mills and other large manufactories, especially where steam power was generated.

* * *

A car barn and shops for the B. C. Electric Railway are to be built in Vancouver on a new site in Mount Pleasant, recently purchased. It is the intention at these shops to manufacture not only parts of cars, and repairs, etc., but also to turn out everything possible to make and in common use in the electric business. The company has at present a car shop at New Westminster, where all the cars for their lines are turned out.

* * *

To improve the water pressure in the down-town portions of the city, and to give supply to portions on the higher levels, the city of Vancouver proposes to install a stand-pipe, pending the completion of the projected high-level system. For this latter extension the ratepayers have voted the sum of three-quarters of a million dollars, the entire sum to be expended in three years.

* * *

It is proposed to use very large quantities of large diameter wood stave pipe for the proposed high-level system, and in that connection the city has already called for bids for 13,000 feet of 30 and 36-inch pipe, from 0 to 200-ft. head.

Recent reports from the oil fields of south-eastern Alberta indicate almost startling discoveries following the steady development work which has been pushed by several companies. The centre of the excitement is south of Pincher Creek, a station on the Crow's Nest Pass Railway, and within five miles of the international boundary. There it is stated vast gushers have been tapped by boring operations, and the view taken by geologists who have examined the field is that there exists under the area being exploited a vast subterannean lake of the finest grade petroleum ever discovered. A very great interest is being aroused in the field, and the only drawback to its rapid development is entire lack of transportation facilities, even roads being of the crudest.

Have you a stock of filters. There is good money in this line during the Spring and Summer seasons.

Horse goods will sell well during the Spring.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, April 12, 1906.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

Business is active and values are steady in all staple lines. With the exception of an advance in axle grease there are no quotable changes of importance this week.

SCREEN WIRE CLOTH — Price is $1.55 per 100 sq. feet.

SCREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

Sheet lead, rolls	5.75
Sheet lead, less than rolls	6.25

* * *

It is announced here on good authority that a big lead corroding works will be established in this city. A site for the works has already been secured in the western part of the city. The land acquired comprises 35 acres, and it has been purchased by Henderson & Potts, the big paint manufacturers, who are acting for the promoters. It is stated that the Brandram Bros., of London, the white lead manufacturers, are the prime movers in the project. They will give employment to hundreds of men. Mr. Henderson is now in London in connection with the matter. The company will be capitalized at two million dollars, and a prospectus has already been issued here to give local capitalists an opportunity to invest. It is stated that the works will be the first of the kind to be established in Canada.

* * *

A. L. McCallum, who for several years past has been in charge of the ammonia house and acid plant of the Dominion Iron & Steel Company at Sydney, and who was formerly chief chemist of the Dominion Coal Co., has arrived here to take charge of the general analytical and assay laboratory recently occupied by F. W. Mason, public analyst, whose business he has purchased.

* * *

In recognition of the splendid services rendered during last month, the management of the steel works at Sydney have presented the employes with a supply of cigars. The month of March was a particularly good one. The blast furnaces were running all the time and as the supply of coke was very good, a large tonnage of iron was produced. The open hearth output was up to the average of the past five months, and the quantity of ingots produced was very good. More than the usual quantity of steel rails were produced, but as there was a shortage of cars the shipments were not as large as usual. The car supply has now been increasing daily, and the surplus is rapidly being shipped off, and will help to make the output for April the largest on record.

THE YEAR'S RAIL OUTPUT.

Although their books are already filled with orders for standard and light section rails to be delivered throughout the remainder of this year, and they are now experiencing great difficulty in making shipments on time, the leading rail mills of the United States are still being besieged by the steam and electric roads to accept contracts for additional tonnages. The orders booked by the mills of the United States Steel Corporation, the Pennsylvania Steel Co., the Lackawanna Steel Co., the Jones & Laughlin Steel Co., the Tennessee Coal, Iron & Railroad Co., the Colorado Fuel & Iron Co., and other independent concerns aggregated almost 2,900,000 tons last week, and within the last three days the total taken by these producers for this year's delivery was augmented by the placing of contracts for fully 30,000 tons additional.

The combined capacity of all the mills in this country has never before exceeded 3,000,000 tons, but it is now certain that the output this year will break all previous records, as it is known that domestic orders for 150,000 tons more are pending, while foreign lines are also negotiating for about 50,000 tons. It is, of course, probable that the mills will be wholly unable to make 1906 deliveries on all of the tonnage ordered, but even if 50,000 tons or more are carried over into 1907, the rail output will still have to exceed 3,000,000 tons.

The orders which have just added 30,000 tons to the business already on the books of the mills have been placed by the Atlanta & West Point Railroad, which bought 12,500 tons; the East Carolina Railway, which took 1,300 tons; the Tampa Northern, which purchased 4,500 tons; the Great Northern, which contracted for 5,000 tons more, and several trolley lines, as well as frog and switch makers, which secured about 7,000 tons additional.—New York Commercial.

CAPEWELL CO. EXPANDING.

A representative of Hardware and Metal visited the plant of the Capewell Horse Nail Company at Toronto this week and found workmen busy installing a new power plant, which is to supply power for lighting and factory purposes for their growing plant. Since the establishment of this branch last September the company's business has grown rapidly and it has been necessary to largely increase the amount of working machinery. Their process of manufacture is most interesting and at a later date it is hoped that a description of the process can be given our readers.

WIRE TRUST IN BELGIUM.

United States Consul McNally, of Liege, says that five of the largest wire manufacturers of Belgium have entered into a syndicate agreement to control the markets of Belgium and Holland. Quite recently their sphere of action has been extended to include the European countries by reason of a failure to reach an agreement with the German manufacturers, because of their demand of the lion share of the orders. This agreement is subscribed to by the five manufacturers, and a violation of any of its covenants is met with a fine of $10,000. It is said that all orders received are forwarded to the syndicate's principal office, at which place the orders are divided. The agreement is to remain in force and effect for three years unless the same is abrogated by a majority of the contracting parties. The competition with the German makers is keen. It is said that the German manufacturers receive from the government a sort of subsidy on all orders intended for export, and that with this assistance they are enabled to cut under the ruling price in foreign markets. It is thought that this trust agreement will not be long lived.

HOW GERMANY GETS BUSINESS.

"German firms, either singly or several firms, combined, choose some young man in their employment whom they consider suitable, and send him out to the country with which they wish to do business. This man receives a salary for the first few years, as well as a share in any profits that may be made, but in addition to this he is allowed to draw on them at his discretion for a considerable sum of money for advertising, traveling expenses, etc.

"His instructions are to settle himself modestly in the principal town, with the avowed intention of setting up a little general business for himself. If possible, he is to obtain regular employment until he is able to do so. He is then to give orders to the regular commercial travelers who frequent the place, for small quantities of the goods they usually supply there. In a year's time he is probably in a position to know what class of each kind of goods sells best, and the reasons for its preference. He has also noticed what improvements could be made, as well as all the details concerning packing, weight, color, quality, size, etc., that play so important a part in the sale of goods in foreign countries. During all this time he is constantly sending home to his employers samples of these goods, and explanations how to make them still more suitable to the market.

"In the first year the little store probably pays its way, and in two or three years it is not only making a profit, but a quantity of really trustworthy information has been obtained concerning the goods in general use in the country.

"During this time the goods are being produced at home, with the improvements recommended, so that the home firms are in a position to compete with any foreigners.

"Their representative then establishes branches in other towns, and the extension of the business simply depends on the capabilities and good fortune of the man employed. Sometimes factories are established.

"Men sent abroad under these conditions have a real incentive to work, as instead of being simply employes, they are working for themselves from the first, with the prospect of gaining a good and independent position.

"A further advantage in this system is that even if the man starts an independent business as soon as he is able, as so many Germans do, the connection still remains, and the knowledge gained, even in a few years, of the actual requirements of the country is worth the money expended.

"In the case of the complete failure of the man sent out, the loss need not be a serious one, if divided among several firms who have allowed a credit of a few hundred dollars each."

DIFFERENT SHAPES OF WIRE.

There is a popular impression that wire is simply a small, round shape like wire in a broom, a piano, a barbed wire fence, or in the ever-ready bale tie or baling wire that is always lying round and can be used for anything—in fact, it is so common one gets it tangled up in his wheel or puts his foot in a snarl of it when on a walk. But wire is not confined to this popular shape, says the American Wire Rope News. It has many shapes and forms. It is flat, square, oblong, oval, star-shaped—in fact any shape that may be desired. These are the days of automatic machines into which is fed a shape of soft steel at one end, while out of the other comes a finished bicycle hub, a knife blade, nail-clipper, pencil holder and a thousand other shapes.

To operate these automatic machines for the best results, the shape that is fed into them should be the nearest possible to the final form wanted. It is up to the wire maker to do this and an idea of the result is shown in an illustration which shows a section of pinion wire. This is drawn into star shape just about the same way as drawing wire plain round. This star shaped wire is then sawn into slices, thus making cog wheels.

Great progress in this form of manufacture has been made in the past few years, so that it is now possible to put on the market many articles at an easy-selling cost that were previously too costly to sell. Where a great deal of shaping has to be done on the lathe, in order to put the "raw" material in form for final cutting in an automatic machine, the cost of production is considerable. Wire-drawing is the cheapest method of reducing to the net shape.

The shapes that are covered by the term "wire" are, therefore, many and varied, from a flat knife blade, a piece of shafting or a molding wire to a small, round wire that calipers as fine as a hair Tensile strength, of course, does not figure materially in this odd-shaped wire, as it is only needed to be of soft steel to readily cut into shape in the automatic machines. Wire that has the greatest tensile strength is piano wire, which is made to sustain tremendous loads with the least stretch: but such a wire would be impracticable for cutting and shaping machines on account of its great hardness. Rope wire has to be made of great tensile strength, but soft enough to be flexible, thus standing the great amount of bending, and at the same time hard enough not to yield readily to abrasion. Telegraph and telephone wire must be of a quality to carry electricity the quickest, and at the same time strong enough to bear itself from pole to pole.

CHINA'S MINERAL WEALTH.

China's resources of coal and iron are among the largest and most favorably situated in the world. The extent of the great coal fields has been put at 400,000 square miles—more than seventy times the aggregate extent of all the coal fields of Britain. It is expected that very soon Chinese coal will be delivered at Far Eastern ports at prices with which no other coal can possibly compete, and that China, in consequence of this development, will become a large exporter of iron.

zinc ornaments

Pressed Zinc Ornaments often make the beginning of a profitable trade in "Metallic" building materials. Their beauty suggests many other metal things.

Dealers catering to the Sheet Metal Trade find the quality, workmanship and variety of the "Metallic" line more satisfactory than any other.

Being of solid zinc or copper they last forever and their outlines are clearer-cut and sharper than any similar die stuck work.

The use of "Metallic" Pressed Metal goods in the form of Friezes, Festoons, Centres and other Ornaments for interior and exterior decoration are innumerable. New designs are added constantly.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing.
"Metallic" Eavetrough and Conductor Pipe
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

414

FOUNDRY AND METAL INDUSTRIES

Contract has been let for the structural steel to be used in the new steel plant at Welland, Ont.

The graphite discovered by Neil L. Campbell, at French Vale, Cape Breton, has been shown to contain 70 per cent. of graphite.

The Stanley Smelting Works of Bannockburn shipped a carload of pure lead to Toronto a few days ago, which brought $98 per ton.

Drummond, McCall & Co., sales agents for the Algoma Steel Co., have closed a deal for 50,000 tons of 80-lb. steel rails with the C.P.R. These rails are to be used between Port Arthur and Superior Junction.

Probably one of the least talked of and yet withal the richest copper properties in Ontario is that of the Massey Mining Company, situated about four miles from Massey, Ont., and about the same distance from the Spanish River.

The ore body is strong and better values than were ever anticipated have been found. Besides the veins which are now being worked, other properties have been discovered adjacent to these, which promise on development to be quite the equal of any that have hitherto been tested.

A favorable feature, and one that enhances the value of the property, is its location. It is only four miles from Massey station, on the C.P.R., and the same distance from the Spanish River, which is navigable up to that point, thus affording shipping facilities either by rail or by water.

Extensive improvements will be made in the Boundary mines in British Columbia this year. The British Columbia Copper Co. are installing three large furnaces, the Dominion Copper Co. is equipping a new machine shop, and an electric locomotive has been put in the Granby mines.

This property was owned some six or seven years ago by R. R. Gamey, M.P.P., and was sold by him to an agent of Col. Thompson, who with his associates have now full control of the property. That all this expenditure has been amply justified is shown by the results that have since been obtained.

Walter Kennedy, representing Pittsburg and New York capitalists, states that sufficient iron has been found in British Columbia to warrant the erection of a $5,000,000 steel plant on Puget Sound. The parties interested have secured iron deposits amounting to one hundred million tons, and more than that of coking coal. Those at the head of this movement claim there are as great possibilities for iron producing in British Columbia as there are in the east.

Some six or seven years ago the property that is now being operated by the Massey Mining Company showed an assay from its ore of between seven and eight per cent., and this before the real richness of the property was known. The oil treatment is being used and about fifty tons per day is being handled. The plant is equipped with the newest machinery and quite a staff of men are steadily at work. Those who are in a position to know say that this is the richest and mast valuable copper property known in Ontario to-day. A valuable deposit of grey copper ore has also been discovered.

GIRLS AS FOUNDRY HANDS.

Emancipation, freedom, equality, have placed women in strange occupations. One wonders whether suffrage would only add to the list of unusual performances in which they are engaged, or whether if it had any effect upon them economically, it would take them away from machines, increase their absurdly low wages in many instances, and put them where they belong, says the New York Commercial.

For the present, with no better education in absurdities than we have so far achieved, it is hard to imagine anything more incongruous than a woman in an iron foundry. And there are many women employed at different kinds of work in several foundries in Chicago. Many firms hire women as coremakers. Something like 1,500 girls are working at this trade in iron and brass. A core is the inside mold used for hollow castings, such as pipes and tubes. It is made by packing sand into molds corresponding to the iron mold.

The piece workers are paid various prices, ranging from 10 cents a hundred for very small pipes to $3 for large ones. One girl was seen making a core about six inches long with a curve of two inches at each end for which she was paid 75 cents a hundred. She said she could make 200 in a day. The good piece workers in this factory make from $1.25 to $1.67 a day. The girls who do the actual coremaking are not the only ones at work in the core room. There are girls who do nothing but bend the wires which are put in the sand molds to hold them together.

One firm employs three hundred and fifty or four hundred girls in the coreroom. Almost all of them are Polish and Bohemian immigrants and very few speak English. Most of them live in the Polish settlement which has been established in the neighborhood of the works. With the thrift and clannishness of their race they crowd together in small space. Many of them have done other kinds of work, but prefer the factory. One, a Norwegian girl with beautiful yellow hair, who has been with her present employer two years, was a house servant for six years—she is 20 now. Zelda Ermine Stewart, a Chicago investigator of industrial and social conditions, asked this young Norwegian girl recently why she preferred foundry work to household service.

"Well," she began, "in the first place I have more liberty. I have all my evenings to myself and I am nearer my own boss than I was before."

"How about the money side of it?" she was asked.

"O, I don't make as much money here; I made $4.00 a week and didn't wear out so many clothes. My $4.00 were almost clear. Here I make $5.50 and pay $2.50 for board and have my car fares to pay; but what is the use of having money if you never get a chance to spend it? I used to work all day and then on Saturday sometimes I would have to work until 12 o'clock at night to be able to get off late on Sunday afternoon."

This, the instinctive, irrepressible gregariousness of a normal, genuine girl, is the reason housemaids are hard to find. Her evenings to spend as she pleases, crowds of girls to talk nonsense to and to giggle with, and no backdoor key—these are the charms of the factory to the factory girl. This girl is an orphan. She has no home and has to pay board. She must squeeze the pennies pretty hard to be able to live on $5.50 a week, but she looks happy. She says she has to buy three street skirts, three pairs of shoes, and "lots of shirtwaists" every year.

In answer to the question, "Why do you employ girls?" one superintendent looked at his girls and waved his arm with an inclusive gesture.

"See how fast they work," he said. "They are better fitted for it. This is not work for a man to do. No fellow will sit at a bench and pack sand into a mold all day without swearing about it. A man couldn't do some of our work. His hands are too big and clumsy."

Another employer frankly stated that he hired girls because he got them cheaper.

There is no reason why girls should not make cores in foundries if they would demand the wages that men get—$2.50 and $2.75 a day. It is not that the work is hard, for it isn't; it is not that the conditions are bad, for they are good as usual; but the surroundings seem so unnatural for a woman. A young girl, especially a pretty girl, as many of them are, sweet faced, bright eyed, with fluffy hair and alluring, girlish manners, seems so utterly, ridiculously out of place in an oily, dirty, noisy foundry.

SAVING THE SCRAP IRON.

The scrap of the iron mills is now saved by a process which has been recently devised by two residents of the Pittsburg iron district. The material is converted into a new product without the necessity of re-melting. Not only is the scrap saved, but also muck bars, scrap bars, steel rail and the like. The process consists of accumulating the material into piles or fagots with a generous mixture of ferruginous scale or cinder forming a welding material for the iron and steel. The piles are then heated to welding heat and pressed into shape.

It is an excellent plan to work out everything you have to do to a definite date. If not required to make a promise to someone else, make one to yourself. Set a date for the completion of every task and hold to it.

NEW METHOD OF MAKING GLASS.

United States Vice-Consul Bock, of Nuremberg, reports a new invention in the glass plate industry, concerning which he writes :

Should it really possess the advantages claimed it would cause serious damage to the blowing glass plate industry in this district, where "¾" glass plates are chiefly manufactured. So far two methods have been employed in the manufacture of crystal plate glass and mirror and window glass, namely, that of casting and blowing. The new third method is the invention of Mr. Fourcault, a Belgian, who has sold his patent to the European syndicate of plate glass manufacturers for $952,000. This syndicate consists of German, French and Belgian manufacturers, and one Bohemian factory.

Until now, in the making of window glass, the molten substance has been blown into cylinders by glass makers' pipes and subsequently flattened, while in the making of plate glass the viscid mass was cast from the pots and rolled. The new invention draws the molten substance from the pot and conducts it between rollers lying side by side. Seventeen pairs of these rollers are built up towerlike above the pot. The liquid mass cools on its way between the rows of rollers and comes out from them polished on both sides, in any desired thickness (this being regulated by the relative position of the rollers), beautifully flattened and ready for use.

At present dimensions of from 157.48 inches to 39.37 inches can be made, but experiments are being conducted to allow of the manufacture of from 98.42 inches to 68.90 inches as well. It is believed that this invention will bring about a revolution in the trade. One early result would be that the manufacturing of plate glass of 157.48 inches and less would undergo an entire change, as the making of glass plates would come chiefly within the scope of the plate glass furnaces. Splendid as this invention appears, it may greatly injure the plate glass industry in the Bavarian city of Fuerth, as it would be impossible for the glass blower to compete with a simple and cheap process of drawing out the glass mechanically.

DIFFICULTIES OF PAINTING ZINC.

A writer in Popular Mechanics recently explained his method of overcoming the difficulty in making paint adhere to zinc, his desire being to make zinc be the support of a slate surface, and painting the surface with a paint composed of shellac in alcohol containing a solution of pumice stone and lamp black. The method employed was as follows :

"A portion of the 'paint' was diluted with alcohol and the surface of the zinc well sand-papered while thoroughly wet with the solution, the intention being not to allow any of the surface to come in contact with the air during or after the operation of sand-papering. The paint was thick enough to cover thoroughly as it dried. When every part had been gone over thoroughly, a number of coats were added, in order that the low places might be filled up and the surface ground with pumice stone. Time has proved the success of this experiment. Many years have gone by, but the coating holds perfectly, and the matter is now brought forward with the hope that the suggestion may have useful application in ordinary painting. The theory on which this experiment was based is that zinc oxidizes instantly whenever a fresh surface is exposed to the air. This oxide is so white and thin that it is not visible. Nevertheless, it is present, and forms an unstable attachment for the paint as commonly applied, thus preventing the same from coming in absolute contact with the metal itself. The sand-papering operation, under the cover of the wet paint, produces a different condition of things."

Here is an altogether practical suggestion for the office man who is keen on self-improvement : See how long you can go without confessing that you forgot and without falling down on a promise. Keep a record for a year.

REMINISCENCES BY AN OLD 'UN.

"When I think of the times when I was running a hardware store back in '67 it seems to me that the hardwareman nowadays is slipping up on a little line of goods that probably he does not handle to any extent. If he only realized its almost universal use he would not lose any time before stocking a good supply," said a man of long experience in the hardware and paint trade the other day, when speaking of lye as a universal cleaner.

"Lye, unadulterated, the kind that 'eats dirt,' is the kind I used to handle in my hardware days. I sold it to farmers for spraying trees and for a general cleaner about the farm, and to the housewife for an all-round cleaner about the house. It removes old paint from floors, woodwork, etc., cleans sinks, baths, iron and brass work of all kinds, and it also makes soap. I went into a hardware store the other day for a can of lye and was informed that they did not handle it. Now, my experience in the hardware business has been considerable and I feel that a good lye as a cleaner has a universal call. It is a cleaner everybody wants and consequently the wide-awake hardware merchant of to-day will find, as I did, that it is a profitable line to handle."

What Should a Good Paint Be?

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 13, 1906.

Except for a drop in the price of turpentine, there is little worthy of note in the state of trade this week. The price change referred to is but the usual falling off at this time of year. The advance of the season has brought the harvest of the crop in the southern pine belt, and the presence of the new turpentine on the market has naturally forced prices down.

Trade generally continues remarkably brisk, even after an active Winter, during which bookings for some time in advance were quite heavy. Prices are all firm. In the case of red lead, litharge, orange mineral, and kindred pigments, easier prices are reported from the base of supplies, but Canadian quotations have not been affected thereby.

LINSEED OIL—We quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c., f.o.b. Montreal, net 30 days.

TURPENTINE—The harvesting of the new crop has caused a drop of 3c., and we now quote: Single barrel, 95c. per gallon; two barrels or over, 94c.; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

GROUND WHITE LEAD—We give prices as follows: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC — We quote as follows: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil)— We quote: Pure, 8c. to 9c.; No. 1, 6 1-2c. to 7 1-2c.; No. 2, 5 1-4c. to 6 1-4c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7 1-4c.; 100-lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

RED LEAD—Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6.00; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC—We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH—We quote: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is firm at following prices: Firsts in cases 8 1-2c., is barrels 8c.; seconds, in cases 8c., in barrels, 7 1-2c.

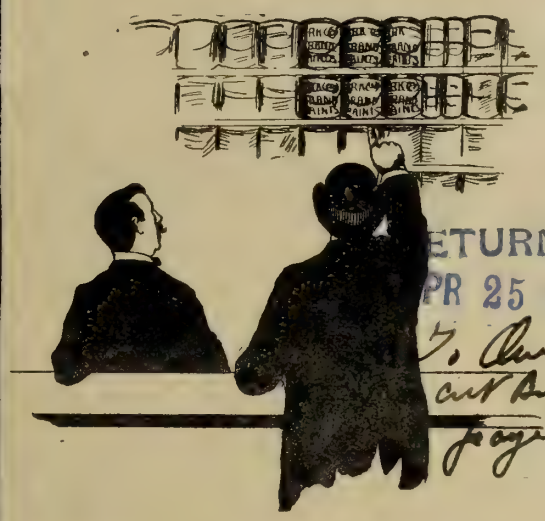
REFINED PETROLEUM—We quote as follows: American water white, 17c.; Canadian prime white, 15 1-2c.; astral, 20c., ex warehouse.

PARIS GREEN—New prices have not yet been issued and meanwhile quotations can only be obtained from the dealers direct.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS—The most recent advices from glass manufacturers in the Charleroi districts, are to the effect that the committee of the manufacturers' syndicate have laid down a bill providing for a restriction of output, and it is believed that this bill will be carried. If so, the production will be reduced about 25 per cent., in which case higher prices would immediately result. Meanwhile, we are quoting the following: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4.00; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5.00; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8.00, and seventh do., $9.00. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00; and twelfth do., $28.50.



TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 13, 1906.

Linseed oil has made an advance of one cent during the week. The Argentine crop of seed which reached England in March was not as heavy as formerly, and as at this season of the year the oil supply is largely dependent upon the South American crop, the increased prices have been the result. The demand, too, is increasing, and reports would indicate that a further increase is not improbable in the near future.

Turpentine is still weaker and shows a decline of two cents this week. Reports from the south now indicate that

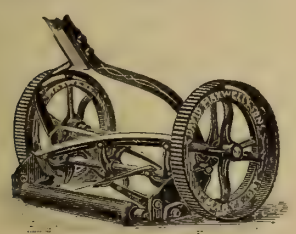
That's the Paint I Want

ARK BRAND

No other will do. I have tried them all and I prefer **Ark Brand** because :

1. **It is the most economical.**
2. **It lasts the longest.**
3. **It never cracks.**
4. **It can be used for inside or outside use.**
5. **It is reasonable in price.**

Ark Brand Paint is the People's Paint. The people buy it generously.



Remember : **Muresco** enjoys great popularity and gives highest results. STOCK UP !

DAVID MAXWELL & SONS, ST. MARYS, Ontario, Canada

SPECIAL

We take pleasure in introducing to you our new

"VERONICA" GREEN

This Green is made solely by ourselves, from the essential chemicals in our own Color Works in Montreal.

The

"VERONICA"

is a soft rich green of great covering power. It is very durable and manufactured especially for Window Blinds, Shutters, Verandahs, Screen Doors, Engines, Agricultural Implements and all kinds of wood and metal work, and for all purposes where a green paint is indicated.

The

"VERONICA" GREEN

is manufactured only by THE CANADA PAINT COMPANY, LIMITED, of Montreal, Toronto and Winnipeg.

"VERONICA"

is Copyrighted as a Trade Mark with the Department at Ottawa, Canada.

The

"VERONICA" GREEN

is made in four shades, viz.:—Light, Middle, Deep and Extra Deep. Insist upon the

"VERONICA"

as the undoubted superiority of this Green will probably lead to disappointing imitations.

For prices follow the prices of EVERGREEN in our 1906 Catalogue.

The

"VERONICA"

is put up as follows :—

In Dry Form, 6-lb. and 10-lb. Tins, 100-lb. Kegs and 600-lb. Barrels.

In Paste Form, 1-lb., 2-lb. and 5-lb. Tins, 12½-lb. and 25-lb. Irons.

THE CANADA PAINT COMPANY Limited

the coming run will be larger than anticipated.

Other prices remain stationary. White lead is still the same, scarce and firm in price. No change has been experienced in the Paris green situation.

Glass is being cut considerably owing to the selling of salvage glass, and prices are somewhat demoralized.

WHITE LEAD—Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 560 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1, in casks of 500 lbs., $5.50, ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c., in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c., in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1.00 per 100 pounds.

WHITING—60c. to 65c. per 100 lbs., Gilders' whiting, 75c.

PARIS GREEN—Prices have been withdrawn owing to recent advances.

SHELLAC VARNISH—Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 56c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 59c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE — Single barrel lots, 96c. to $1 f.o.b. point of shipment, net 30 days. For less quantities than barrels, $1.05 per gallon will be charged.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels $1.80; pure linseed oil, $2.00 to $2.10; bulk in 800-lb. casks, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.00.

CASTOR OIL—English, in cases, 8 1-2c. to 9c. per lb., and 10c. for single tins.

REFINED PETROLEUM — Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

Sharpening stones sell well if properly displayed.

PAINT PRICES ADVANCE.

The Sherwin-Williams Company announce that owing to the increased cost of important raw materials and other items entering into the manufacture of high-grade paints, they have been compelled to make an advance of 5 cents per gallon on both S.W.P. and Porch Floor Paint. This is the second advance of 5 cents, the former having been made in November last. Prices of S.W.P. are now as follows : Quarter gallons, $1.45; half gallons, $1.40 ; and one gallon cans, $1.35.

HIGHER PRICES FOR GOLD LEAF.

Painters and decorators doing high-class work will probably find themselves called upon, in the near future, to give higher prices for at least one article which is in constant use.

Advices have reached this country stating that a strike is threatened among the gold leaf workers of Europe. Should this actually occur, and there seems every probability of it at present, the output will be restricted, even if it does not entirely cease for a time. This reduction of the supply will, of course, enhance the value of gold leaf, and higher prices are almost assured.

TO PREVENT LEAD POISONING.

As the result of extensive experiments with lead-workers at Charlottenburg, especially those exposed to lead-dust, which is particularly dangerous, Prof. Grawitz has made what appears to be a most valuable discovery in the way of checking incipient poisoning. He finds that some time before the usual symptoms of lead poisoning begin to appear its presence may be detected in the blood by the occurrence of depositions in the red blood corpuscles, that can be plainly seen under the microscope. He therefore proposes that all lead-workers more particularly exposed to danger should have their blood examined periodically, and those found to possess the preliminary symptoms mentioned above should be transferred from indoor work to the less dangerous outdoor tasks of the factory, either temporarily or altogether. This measure, coupled with suitable treatment, will rehabilitate the sufferer without allowing the malady to proceed to actual poisoning. The examination takes only a few minutes, and will in many cases avert the dangerous consequences of chronic lead poisoning.—Farben Zeitung.

A USEFUL SOUVENIR.

The International Gas Appliance Co. have gotten out a very neat and useful souvenir in the form of a thermometer and barometer combined. The International Gas Appliance Co. have promised to send one of these to any reader of Hardware and Metal writing to the head office of the firm at Toronto on his own paper.

A paint window display would be timely now.

* * *

Profit by experiences of last year when you book your orders for this season.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Gas Engine Supplies.

The use of gasoline engines has grown in the past two or three years at a very rapid rate, chiefly in connection with automobiles and launches, but also to a large extent in all commercial enterprises requiring an engine of moderate power, such as machine repair shops, laundries, bakeries, etc., and especially so on the farm where it has proved its general efficiency and economy in grinding, chopping, pumping, etc. This has created such a demand for accessories and parts that the Canada Cycle & Motor Company, with their usual enterprise, have added an automobile and gas engine accessories department. It is their intention to make this department headquarters for these lines, and they will carry in stock a full assortment of all the latest and most up-to-date accessories for automobiles and gas engines.

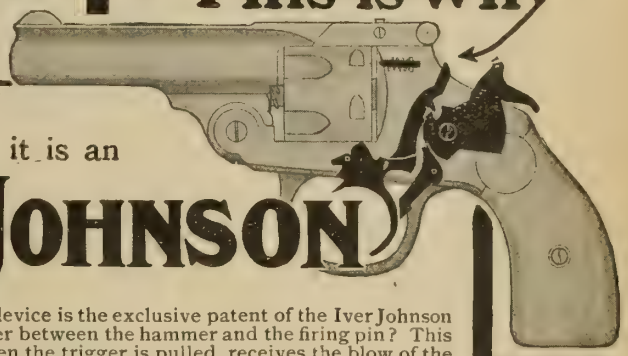
Being pioneers in the automobile industry in Canada, their experience should enable them to know exactly what to handle in these lines, both as regards assortment and quality. In the past a good deal of trouble and delay has occurred in procuring parts or replacements, as in the majority of cases the consumer had to get some from the manufacturer, and the fact that the Canada Cycle & Motor Company will have on hand a complete stock of the latest French, American and Canadian accessories will be much appreciated.

They have just issued a handsome automobile and gas engine accessories catalogue, a copy of which will be mailed to the trade on application.

Turner's Tents.

Summer will soon be here—the time for tents, flags, awnings, etc.—a full range of which are shown in the catalogue of J. J. Turner & Sons, of Peterborough. While these goods are intended to protect one from the sun's rays, there is certainly nothing "shady" about them, as can be seen from a perusal of their booklet, which will be sent upon request.

Builders' Hardware.



Amiot, Lecours & Lariviere, of 10 Craig street west, Montreal, make a specialty of builders' hardware and contractor's supplies, which, together with plumbing supplies are described in their catalogue, which will be sent to dealers on request.

Taylor-Forbes Lawn Mowers.

The Taylor-Forbes Co. invite dealers to ask for a copy of their lawn mower catalogue. The grass will soon require cutting now and those whose stocks are not in shape would do well to write to this company's head office at Guelph for a copy.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

J. M. Poirier will start a carding mill at Waterloo.

The Western Bay Company will erect a factory at Calgary.

The Ideal Bedding Co. will increase their factory capacity in Winnipeg.

The McGill Chair Co., of Cornwall, will build a new factory 150x60 feet.

J. M. Diver will shortly commence work on a match factory in Sarnia.

The capacity of the McDonald box factory at Peterboro will be increased.

The Miramichi Lumber Co. will build mills at Chatham, at a cost of about $50,000.

The Canadian Machinery Agency offers for sale a planing mill plant at St. Cunegonde, Que.

The mayor of Medicine Hat offers special inducements to manufacturers to locate there.

The Great West Saddlery Company, Winnipeg, will build a factory and warehouse at Saskatoon.

The Sharples Separator Company will erect a factory in Toronto for the manufacture of cream separators.

The Sawyer-Massey Co. will erect a large warehouse in Hamilton, and the Norton Mfg. Co. will increase their buildings.

Ross-Harris Company, Montreal, have secured a contract to build 50 miles of C.P.R. road from Parry Sound to Byng Inlet.

Kenora, Ont., asks for tenders for construction of a water power development. Tenders will be received up to the 16th inst.

A large flow of natural gas has been struck south of Hamilton, on the route of the Hamilton, Caledonia & Lake Erie Railway.

The Ottawa Dairy Co. are installing a plant for the manufacture of skim milk into powder, which is used for many purposes.

The Hamilton Power Company will spend a quarter of a million dollars in increasing its plants at Northfield and Departure Bay, B.C.

A. E. Williams and Crown Attorney Hart, of Vancouver, are at the head of a company who will build and operate a million dollar pulp mill.

C. M. Hays, Sir Thomas Shaughnessy, E. H. Fitzhugh, F. H. McGuigan, D. McNicoll, and G. W. Leonard, will seek incorporation as the Toronto Union Station Company, with power to erect a union passenger station at Toronto.

The Brockville Mining Co. is developing the mica mine near Elgin, Ont., and has opened works in Brockville for finishing the product. About twelve people are employed, and the outlook is that the industry will become an extensive one.

BUILDING NOTES.

R. Parsons will build a brick store at Goderich.

D. Barton will build a brick store in Hamilton.

Fort William will build a $30,000 High School.

Hartney, Man., will have a town hall to cost $12,000.

F. Symes, Fort William, will build a $4,500 residence.

G. S. McConnell, Vancouver, is about to build a hotel.

A. E. Walton will erect an apartment house in Toronto.

Dr. Mitchell, Fort William, will build a $5,500 residence.

Hugh Sutherland will erect a $40,000 house at Winnipeg.

The Merchants' Bank will erect a building in Brandon.

Joseph Whitely will erect a store building at Goderich.

D. W. Macdonald, of Edmonton, will build a $4,000 block.

E. F. Hutchings will erect a $30,000 residence in Winnipeg.

Vancouver building permits in March amounted to $350,000.

Alex. Ballantyne will erect a $4,000 residence at Brantford.

W. H. Green, of Wingham, Ont., will build a block of stores.

Moody & Co. will build a three-storey hotel at Calgary.

F. Prunty, of Kearney, Ont., asks for tenders for a new hotel.

Lochalsh (Ont.) Presbyterians ask for tenders for a brick church.

The Northern Bank will erect a $10,000 building at Qu' Appelle.

A. J. Timbers will build a hotel in Fort William to cost $25,000.

The Winnipeg Rowing Club will build a club house to cost $15,000.

H. J. Tharle will build a $6,000 tenement house at Fort William.

J. P. Oullette, Quebec, will erect a brick building to cost $10,500.

An addition 60x35 feet will be made to the Albion Hotel, Battleford.

Fort William will erect an electric light sub-station to cost $10,000.

Thos. Cozzolino, of Sydney, C.B., will erect a new tenement block.

A new building for the Royal Bank will be erected at St. John, N.B.

R. Fraser, Westville, N.S., asks for tenders for a Presbyterian church.

Mr. Halton, of Fort William, will build a $20,000 hotel at Westport.

Renfrew, Ont., contemplates a $10,000 addition to its Collegiate Institute.

The Hudson's Bay Co. are building a 50x51 addition to their Calgary store.

S. F. Flatt will build an apartment house at Fort William, to cost $12,000.

W. J. Ireland, architect, Stratford, asks for tenders for a Presbyterian church.

Honeyman & Curtis, Vancouver, ask for tenders for a new Presbyterian church.

The Talbot street Baptists of London will build a new church, to cost about $50,000.

L. L. Peltier will erect a $10,000 store and dwelling building at Fort William.

A new hotel, called the Alexandria, to cost $40,000, will be erected at New Liskeard.

The Montreal Terminal Cartage Company will build a warehouse to cost $137,000.

The Standard Bank will build a $3,000 branch at Yonge and Charles streets, Toronto.

The Western Bag Co. has taken out a permit for a building to be erected in Winnipeg.

The British Columbia Market Company will build a new abattoir near Eburne, B.C.

B. Aylesworth asks for tenders for improvements to the Algoma Hotel, Port Arthur.

York & Secord are arranging to build a $60,000 addition to the Windsor Hotel at Edmonton.

E. E. Blackmore, architect, of Vancouver, asks for tenders for the erection of a hotel.

The Grand Trunk will erect a $1,000,000 hotel at Ottawa. Plans are already drawn up.

The contract for the Pulford block, Winnipeg, has been let to Davidson Bros. for $30,000.

The Barrie School Board are asking for tenders for all work on a new schoolhouse at Allandale.

The Canadian Bank of Commerce will erect new buildings in Winnipeg, Carman and Treherne.

John Morley, of Sydney, C.B., will build the new convent of the Holy Angels, at Sydney.

Mrs. P. P. Martin will erect a three-story building on St. Denis street, Montreal, to cost $12,000.

H. W. Newton, secretary of Selkirk, Man., school board, asks for tenders for a brick school-house.

Jameson Avenue Collegiate, Toronto, will be extended and altered to the extent of about $30,000.

Ratepayers of Saskatoon will be asked to vote on a by-law to raise $12,000 for a school addition.

Snyder Bros., Winnipeg, have the contract for Regina's new post office, which will cost $200,000.

The Hudson's Bay Company, of Winnipeg, ask for tenders for a brick boilerhouse and chimney.

A large addition will be made to the Mariaggi Hotel at Port Arthur, which will have a new elevator.

A $10,000 hotel will be erected at Long Branch, Toronto, on property purchased by Samuel Wright.

It is reported that the Empire Elevator Co. has let a contract for a 3,000,000-bushel elevator at Port Arthur, to Barnett & McQueen.

Moose Jaw is to have another new hotel to cost $50,000. It will be erected by George Perry and will be 75 by 125 feet, three storeys high.

The Dominion Government will erect a ten-story building on Front street, Toronto, next to the Customs House, to be used as a receiving warehouse.

R. N. F. McFarlane, of Kingston, has been awarded the contract for repairing and enlarging the Kingston asylum, which was damaged by fire. Amount of contract $7,593.

It is estimated that the consumption of Portland cement in 1905 was approximately 1,346,548 barrels of home product and 718,275 barrels of imported, or a total of 2,004,823 barrels.

FLOOR FINISHES

WHY Every Dealer Should Sell Sherwin-Williams *Modern Method* Floor Finishes.

Because our line comprises the best finish we can make for every style floor—old or new.

Because we back our goods up with forceful advertising direct to the consumer, and help the dealer move them from his shelves.

Because our goods when properly used are guaranteed to give satisfaction, and thus help the dealer in his whole trade.

Because the field for the sale of our Floor Finishes is growing greater every year, and is bound to continue until a majority of the people everywhere replace their carpets with finished floors.

Because considerations of cleanliness, neatness, economy and saving of household labor, demand that finished floors take the place of carpets in modern homes.

Because the demand is here, and the dealer has in S-W. Modern Method Floor Finishes the right goods to sell, with profit to himself and satisfaction to his customers.

CANADIAN CEMENT MARKET.

In reply to an inquiry from a Michigan cement company, the U.S. Consul at Toronto replied that the importations from the United States are based more on quality than the question of supply. He says:

The importations of cement for the five months ending November 30 were 1,785,000 hundredweight, mostly from the United States. The Canadian article has been selling for $1.60 per barrel of 350 pounds at the mill, with a customary rebate of 10 cents on returned bags. According to the statistics for 1904-5, Canada produced 56,800 barrels of rock cement, valued at $49,400 and 850,400 barrels of Portland cement, valued at $1,198,000. For the same year the importations of both were 2,476,000 hundredweight, valued at $995,017, of which about half came from the United States. The present rate of duty is 12 1-2 cents per 100 pounds.

AMERICAN PRODUCTION OF CEMENT.

The advance in cement in the past 15 years has been little short of marvelous, and new wonders are being produced with it almost daily. In bulletin No. 1, issued by the Association of American Portland Cement Manufacturers, S. B. Newberry tells of the growth of the use of cement from 25,000,000 barrels per year, mostly imported, to 30,000,000 barrels, practically all of American production, in 15 years, as well as how to properly mix cement. It is worthy of careful perusal, for the development of cement possibilities seems to be practically in its infancy, and it is well that all hardware dealers and builders should keep in touch with the latest developments.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (a $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

SITUATION WANTED.

EXPERIENCED, enterprising hardware store and office man seeks responsible position; Ontario or Northwest; inexpensive, highest reference. Ockenden, 122 McGill St., Toronto, [13]

BUSINESS CHANCES.

WRITE for lists and quotations of hardware, motor and cycle accessories, sporting goods, stationery, rubber goods, chemists' sundries, pipes, pouches, etc.; state requirements and lines interested in. G. Bishop, Mary Ann street, Birmingham. (13)

SITUATIONS VACANT.

AGENTS wanted in all parts of Canada to sell a patented article which has met with great success during the last ten years, in Canada and United States; travellers with good connection among the hardware trade would do well to write for full information. Box 511, HARDWARE AND METAL, Toronto.

A SMART, active man wanted for Saskatchewan who understands steam heating and plumbing; must be able to figure the cost of any job; to the right man full charge of this department will be intrusted. Apply Box 515, HARDWARE AND METAL, Toronto. [17]

RETAIL hardwareman wanted for Saskatchewan who has some knowledge of bookkeeping; state age, experience and references. Box 514, HARDWARE AND METAL, Toronto. [17]

HARDWARE buyer wanted; must be thoroughly experienced, up-to-date and capable of systematizing this part of the business. Apply, giving references and stating salary expected, to Ross Bros., Limited, Edmonton, Alberta.

PRACTICAL tinsmith wanted, capable of taking charge of shop; good workman; best wages; steady employment. Write Ross & Matthews, Cannington, Ont. [17]

SIDE LINES

TRAVELLERS calling on hardware trade, who are willing to take up a good side line which has been well advertised, and which is already well and favorably known by the trade, should write at once for full information; the article is patented, each sale means a good sized order on which a liberal commission will be paid; hundreds of these articles have been sold in Canada. Box 512, HARDWARE AND METAL, Toronto. (tf)

TRAVELER WANTED.

WANTED—A traveler for Western Ontario to sell paint; a bright hardware clerk preferred, one who has confidence in his ability to sell goods. Apply, with references, to Box 98, HARDWARE AND METAL, Toronto.

MISCELLANEOUS.

MANUFACTURER to make woven wire stretcher for United States firm. This stretcher is self-locking, locks at every point, weighs complete about 39 lbs.; best, lightest, strongest machine on the market; farmers say it is the most serviceable article ever been on the market; retails at $2.75 each. Box 518, HARDWARE AND METAL, Toronto.

BIG WINNIPEG WAREHOUSE

When eastern business men make their first visit to Winnipeg they are prepared for surprises, but there are few who expect to find in the Manitoba capital the largest warehouses in the Dominion. The accompanying cut illustrates the fourth and last warehouse recently constructed by the Miller-Morse Hardware Co., Ltd. This building, which is probably the largest mercantile warehouse in any line of business in Canada, is of mill construction throughout and has been built upon the most modern principles; the foundation and walls are unusually heavy, and four additional stories may be added when business requirements justify the expense.

The main building has a frontage of 84 feet and a depth of 200 feet; there are five stories and a basement, the building being designed to facilitate the economical handling of the business. The annex in the rear, which is used as an iron house, is 66 x 84 feet in dimensions.

On the railway side of the building there are six doors through which cars may be loaded and unloaded from the double tracks. Twelve cars can be placed on these tracks at any one time. On the opposite side there are six doors to receive and send out local shipments, and these arrangements give the firm exceptional facilities for the quick despatch of business.

As stated above, this is the fourth warehouse constructed by the Miller-Morse firm. Hyman Miller and the late F. W. Morse commenced a retail business in Winnipeg in the old "boom" days of 1882, and in spite of the hard times that followed they steadily built up their business. In 1887 they changed their business from retail to wholesale and built their first warehouse on Princess street. This marked the first step in the development of the present immense jobbing trade which this firm controls.

Five years later the demands of a growing business made further extension necessary, and the warehouse then in use was duplicated by another immediately adjoining it, thus doubling the available floor space and storage capacity. In 1896 a third warehouse of the same size was built, affording evidence of steady growth.

Finally, in 1904 Miller, Morse & Co. commenced the construction of their present premises into which they moved in 1905. Simultaneously with the occupation of the new building, Miller, Morse & Co. were incorporated as the Miller-Morse Hardware Co., Limited, under which name they now carry on their business.

Most of the lectures delivered by women are to a one-man audience.

THE BIG MILLER-MORSE WAREHOUSE AT WINNIPEG.

STEEL SQUARES.

A new line of rules and squares has appeared among the hardware jobbers. One article is a square 12 inches long with a seven inch tongue, both blade and tongue being one inch wide. It is of steel with machined edges, polished surface, nickel plated over copper. A scale made in the same way is one inch wide, and either six or 12 inches long. The square retails at 15c., and the scale at 10c.

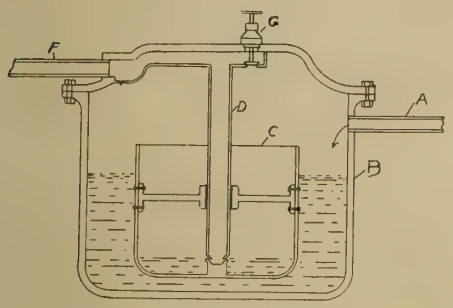
Article XXIX.

STEAM HEATING.

The general principles of the various methods of steam heating having been dealt with in several preceding articles, it is perhaps well that we should touch upon some of the specialties or smaller



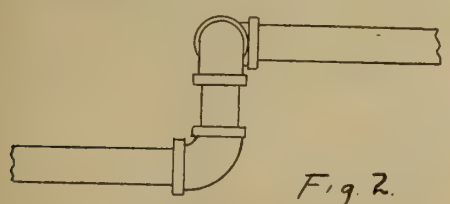


Fig. 1

details which go to make up a complete plant.

In a previous article it was shown how the condensation from radiators supplied with steam from a high pressure boiler could be returned to the boiler by means of a pump automatically controlled by a governor, or, if it is desired, the governor may be omitted and the condensation allowed to run into a tank provided with a proper overflow to the drain, and from this tank it may be pumped by a manually started steam pump, and so returned to the boiler.

There are, however, a great many instances where it is impossible to return condensation by gravity to the boiler, and where the steam pressure is not sufficient to operate a pump, so that some other arrangement must be made in order that the requirements of the situation may be properly satisfied.

As an example of such a case let us take a room, or a whole flat, situated

Fig. 2.

on the same level as the boilers, or even on a lower level, and it is desired to heat this room, or flat, with radiators placed on the floor at various points.

It will be quite clear that if the flow from the top and the return from the bottom of the boiler is connected to the radiators, that the latter will at once fill up with water, and will remain filled, so that such a connection would not answer, but instead we must have an arrangement which will permit the entry of the necessary steam, and allow the escape of the condensation, but prevent the escape of steam, and such an arrangement includes the ordinary steam connection from the boiler to one side of the radiator, and what is known as a "trap" to the other side.

The function of a "trap" is to open every time there is a small accumulation of condensation, and allow the latter to escape to the sewer or tank provided for the purpose, and to close again before any steam escapes, so that the heater never contains enough condensation to interfere with its proper operation.

There are many forms of traps, working on almost as many different principles, but the one shown in the illustration (Figure 1) will serve to indicate

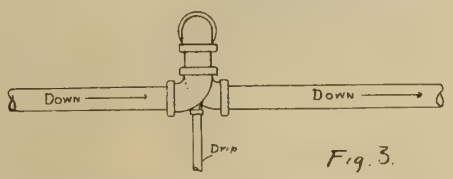

Fig. 3.

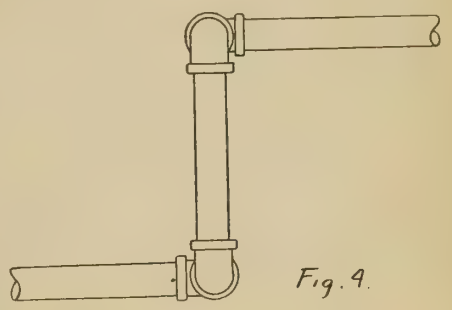
the general method of operation.

In this trap (A) represents the return pipe from the radiators through which the condensation flows into the receiver (B), and the bucket (C) being almost empty, is compelled to float and close the lower opening of pipe (D).

When the water rises to the top of the bucket (C) it overflows into and fills the latter, compelling it to sink, thereby opening the passage into pipe (D), and the pressure of the steam drives the water in the bucket out through pipe (F) to the drain or tank.



As soon as bucket (C) is empty it rises again, closing pipe (D), and prevents the escape of steam.

Should the trap stick or fail to work by reason of the presence of air or for any other cause, by-pass (G) may be opened to permit the escape of air or water until the trap works properly.

Other forms of steam traps are operated altogether by expansion, and as a rule work well, and they may be described in a future article.

While touching upon the question of the details of a heating plant we might make a reference to the necessary provision which, especially where long mains are used, must be made for the expansion of the piping, due to the raising of the temperature.

There are several forms of expansion joints and nearly all of them have their defects as well as their merits, but the kind most generally used, where suitable provision for expansion cannot be made in the piping by the use of additional

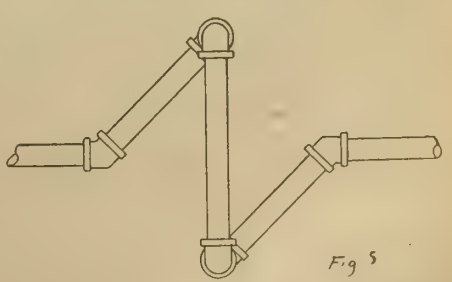
Fig. 4.

fittings, is one in which one sleeve slips backward or forward in another, like a telescope, and the joint between the two is made with asbestos packing held in place by a gland.

We noticed in a recent issue of a prominent trade journal, a query from a steamfitter asking how expansion of a long steam main could be provided for with fittings, and in reply the editor said that the combination of three elbows as shown in figure 2 would provide the necessary expansion by allowing the nipples to swing on their threads, but this, as will be seen at a glance, is impossible with three fittings, for a movement of the main from both ends, due to expansion, can only be provided for where a regular expansion joint is not used by a combination of four fittings, as indicated in figure 3, and a plan view of which is shown in figure 4.

In such a connection provision must be made for the free removal of all condensation by running a "drip" to the return pipe.

The objection to expansion connections of this kind is the frictional resistance of so many elbows, its lack of symmetry, and, in the case of very large mains, the exceedingly great strain exerted before the threads turn.



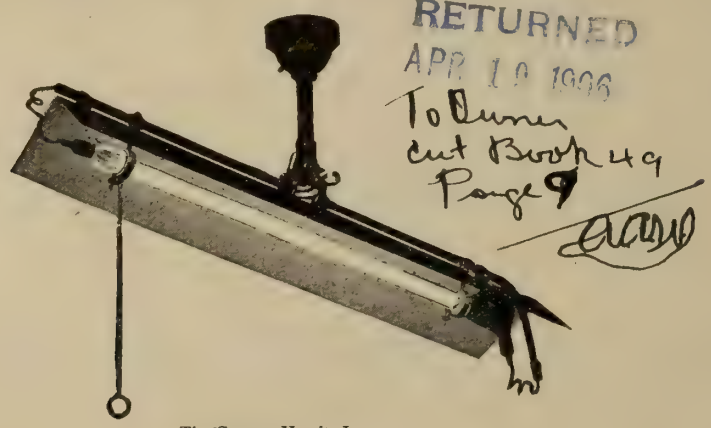


Fig. 5

Figure 5 shows the arrangement used where it is desired to have the main continue in a straight line.

A MERCURY VAPOR LAMP.

A new form of illuminating device has been invented by Peter Cooper Hewitt, of New York, the lamp being illustrated in the accompanying cut and consisting of a vacuum tube varying in length from 20 to 45 inches or more and having a bulb of mercury at one end and a tilting device at the other. In either end there is a metal sealing-in wire, and these wires lead the current to the electrode, one of which is of mercury. The tube is highly exhausted and sealed. The lamp is started by tilting the tube so that the mercury flows from one electrode to the other in a small stream. The metallic mercury momentarily connects the two electrodes, and as the stream breaks, an arc is formed, which increases the vapor pressure. This vapor then becomes luminous, and as there is no escape or consumption of the vapor the lamp will continue to operate so long as the current is passed through it, unless the vacuum is impaired. The glow of the vaporized mercury fills the tube and extends from end to end. The light is diffused, therefore, from every portion of the tube and this gives great extent of luminous surface, which prevents the formation of sharply defined shadows, which are so objectionable a feature of most lamps, particularly those working on the principle of the electric arc. Owing to this peculiarity, the mercury vapor lamp does not throw any dark, heavy shadows.

RETURNED
APR 10 1906
To Burner
cut Book 4 q
Page 9

The Cooper-Hewitt Lamp

Careful estimates of the relative cost of operation of the mercury vapor lamps as compared with the better known types of electric lamps have been made, with the result that the mercury vapor lamp is found to operate at about half the cost of arc lighting and about one-sixth the cost of incandescent lighting. The Cooper Hewitt lamp requires but one-half of a watt per spherical candle power. A 700 candle-power vapor lamp uses less current than a cluster of four 32 candle-power incandescent lamps.

The light given at close range appears brilliantly white, but viewed from a distance it has a decidedly bluish tinge. This peculiarity is due to the deficiency of the mercury spectrum in the red rays, which causes a distortion in color values. Black and white, when seen under this light, are not changed in appearance. Blue, green and yellow are intensified, while red appears black or dark purple, according to the shade. Owing to its highly diffused character, the light casts no sharply defined shadows, and in this respect it closely resembles daylight. While the peculiar color is not particularly pleasant to many people, it is claimed for it that it has a less injurious effect upon the eyes than any other known artificial illuminant. The absence of sharp shadows and the fact that the light does not come from a single point but rather from a widely distributed area, are two facts which combine to make the lamp especially useful in drafting rooms and for use about machinery. The novel form of the lamp and the great brilliancy and peculiar shade of its light also makes it very effective for advertising purposes, and it is well adapted for the lighting of show windows where color values are not essential.—Commercial America.

A NEW ELECTRIC LIGHT.

In Hardware and Metal of March 24 reference was made to the Moore electric light as shown at the recent electrical show at New York. Through an oversight, however, credit for the explanation of the new light and for the cut showing a large room lighted by it, was not given to the Commercial Museum, of Philadelphia, who publish Commercial America, a monthly journal which pays special attention to new electrical and lighting apparatus.

PIPE-THAWING MACHINES.

A useful machine for thawing frozen surface pipes and mains has recently been invented, it being designed to thaw ice within the pipes by means of a supply of hot water and a pliable block tin pipe is employed for conducting the hot water. The machine consists of a force pump, a gasoline coil heater, built after the fashion of the instantaneous water heater, and a coil of the block tin pipe, the coil being mounted on a reel. The use of a force pump makes it possible to take water from any convenient source, the suction pipe having a strainer at its inlet. The discharge of the pump has an air chamber, as desired in any water pumping machine, and the delivery from the pump is passed through the heater coil and thence through the tin pipe coil. The gasoline for the coal burner is supplied from a tank in the centre of the reel, this arrangement being one of the notable points of compactness about the machine.

Altogether the outfit is not over 28 inches in length and weighs when equipped with 150 feet of 3-1-inch six-ounce block tin pipe, about 125 pounds. The machine is the result of some years' experience on the part of the inventor, who, as the result of having many cases of underground frozen pipes to thaw out, devised crude apparatus for doing the work. This apparatus was designed along the line of the present machine and was a success from the start. He then made improvements in its construction, applied for a patent, and now presents the machine described.

STEAM TRAP.

A new steam trap of unique construction, and simple in operation, is now manufactured in Pittsburg. The condensation is received through a hollow trunnion and passes into a receiver through two ports. While the receiver is filling, the trap rests on an arm, and when full it drops down and the water is discharged through a curved pipe and out through another hollow trunnion. When the trap tips, a ball valve moves off from the port, allowing the water to pass from the discharge pipe into and out through a pipe. When the trap is about to discharge and before it reaches a horizontal position, a ball rolls to the opposite end of its retaining tube and hastens the descent of the receiver and allows it to remain long enough to discharge practically all of its contents.

When the water has been discharged the receiver end becomes the lighter one, and the trap rocks back to its original position, and the ball returns towards the end of the trap. If a sudden gush of water should occur, the trap remains in a discharging position and takes care of the sudden accumulation of water. If the trap is placed slightly above the water line of the boilers it will return the water directly to the boilers.

The trap operates without any wire drawing effect through the ball valve, because the valve is moved entirely off its seat when the trap swings into its discharging position, and any mud, scale or foreign matter which may be in the water is blown through the large discharge opening. At the same time the seat of the ball valve will be cleaned before the trap returns to its filling position. Another advantage of the ball valve is that at successive operations it returns to its seat at a different point on its circumference, hence the wear is uniform and the ball tends to retain its spherical form.

PUBLIC COMFORT STATION.

The public comfort station erected by the city of Toronto, at the corner of Queen street and Spadina avenue, was opened to the public this week, the plumbing contractor, Allan Gibson, having completed his work on the job. The station is built underground beside the street car tracks on this wide but busy corner. It is about ten feet in width and twenty in length, three closets, six urinals and two basins being installed. The interior is well finished in marble, but, being underground, is found to be affected considerably by dampness.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 13, 1906.

The Spring impetus is still being felt by the plumbing trades, and supply houses are consequently in daily receipt of large enquiries for almost every class of goods. The big snow storm in the early part of the week had no effect on this brisk trade.

Prices have not changed during the week and conditions otherwise are same as at our last report.

RANGE BOILERS—Trade is very good for both iron clad and copper. We quote: Iron clad, 30 gallon, $5.00; 40 gallon, $6.50, net list; copper, 30 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—The market is steady, as the numerous fluctuations in pig lead seem always to end up at the high-water mark. We still quote: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Trade in this line is picking up very fast. Prices are steady and are quoted as follows: Discounts on all sizes of nipples, up to 6-inch, 67½ to 70 per cent.

IRON PIPE — The demand is large and price has remained stationary for some time. We quote as follows: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00;; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

SOIL PIPE AND FITTINGS—Large shipments are being made from time to time. No change in price is reported. We quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and exfra heavy soil pipe, 60 per cent off. Fittings, 60 per cent. off.

SOLDER—The advances recently declared are being steadily held, especially on account of the rising market in tin. Pig lead, the other main constituent, is constantly shifting in price, but no material difference is made in the general outlook by these fluctuations. We still quote: Bar solder, half-and-half, guaranteed, 22¾c. to 23c.; No. 2 (wiping solder) 18c.

ENAMELWARE — Prices remain as follows: Canadian bath tubs, plate E 1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special, $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 13, 1906.

All plumbing and steam supplies continue in active demand. The latter, in connection with steam engine supplies, are particularly brisk just now.

Local plumbing has been quiet for some weeks, despite the opening of Spring, and contracts are taken at a very low margin. There is, however, an improvement noted this week in Toronto, as a lot of houses are ready for plumbing.

Throughout the country all lines are being asked for, and jobbers are rushed to fill orders.

There have been some changes in brass during the week. Compression work is now quoted at 60 per cent. discount off list, and fuller work 70 per cent. off list. All other prices are stationary.

LEAD PIPE—Business continues active in all lines. Prices firm, no change. We quote: Lead pipe, 8c. discount, 20 per cent.

SOIL PIPE AND FITTINGS — An increased volume of trade has been done for some time, with prospects of a continuance of same. Prices remain the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE — The Spring activity in iron pipe keeps up. No further changes in price. We quote: Black, 1 in. pipe, $4.37; galvanized, 1 inch pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — A large quantity of fittings continue to go out. Prices continue same as previous quotations. We quote as follows: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or kalvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS—The usual trade is being done in boilers, and, although quiet, business is satisfactory for the season. There are no price changes. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—The demand continues easy, as is usual this time of year. Prices remain the same. We quote: as follows: Hot water, 47 1-2 per cent.; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER — Prices are quite firm at present quotations and considerable is being asked for. Bar solder, half-and-half, guaranteed, 23½c., and wiping at 21c.

ENAMELWARE—All lines are in active demand, so much so that there is difficulty at times in filling orders. We quote: Plate El, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

REMOVING OLD PACKING.

To remove old packing from flanged joints is usually easy enough when the pipe can be sprung apart far enough to allow a scraper to work between the two flange faces, but this is often impossible. A correspondent of the Engineer's Review had a pipe running from a head which was anchored solid across the room and running down along a wall. When the flanged connections in this pipe began to leak he drove a cold chisel in at the bottom between the flanges to keep them from springing together and then sawed out the packing with an old hand saw. When he had sawed half way through, the chisel was driven in from the top and the rest of the gasket cleaned out. A new gasket was then inserted and the flange pulled together.

CENTRAL STEAM HEATING.

The central steam heating plant at Terre Haute, Ind., started in the Winter of 1904-1905, was designated to handle ultimately 400,000 square feet of radiation, with an initial installation of 254,000 square feet, says an exchange. Its size may be appreciated when it is stated that the initial installation of street work included some 25,000 feet of street mains, ranging from 4 to 12 inches in size, with the most

distant building on the line 8,000 feet from the central station. The power house equipment consists in part of four water tube boilers, two circulating pumps, each with a capacity of 2,000,000 gallons per day, auxiliary pumps, compressor, condenser, mounted recording instruments, gauges, thermometers and the like. The buildings connected to the system are equipped with automatic regulation, and it is reported that during the first Winter not one of the 60 or more residences supplied with heat varied 2 degrees in temperature, though the outside temperature ranged from 70 degrees above to 23 degrees below zero. It was built for the Citizens' Mutual Heating Company, of that city, under the direction of W. H. Schott, Chicago.

MR. MEREDITH'S NEW JOB.

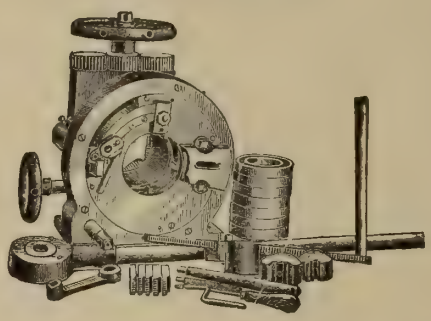
W. H. Meredith, former provincial secretary of the Master Plumbers' Association, has accepted a position as traveling representative for the Monarch Brass Company, of Port Colborne, and is now calling on the trade in Ontario.

NEW BRASS COMPANY.

A. W. Mann, formerly manager of the Canada Brass & Supply Co., London, is organizing a company to manufacture brass goods and sell plumbing supplies at London.

BOB HARRISON ILL.

R. W. Harrison, steamfitter, Toronto, spent a few days this week at Preston hot springs. For a month past Mr. Harrison has been suffering from the grippe, which has settled itself in his muscles, almost incapacitating him from work. Mr. Harrison is contemplating taking a trip to England this Summer if he does not fully recover soon. He says that at the prices plumbing jobs are being taken in Toronto now a man can make money by taking a holiday.



COST OF ILLUMINATION.

In a recent address delivered by President Marks before the Society of Illuminating Engineers he estimated the annual expenditure in the United States for illumination at $200,000,000. Fully one-half of this quantity is expended for electric lighting and this figure is confirmed as being accurate and conservative by recent statistics gathered from independent sources. The next most important illuminant is coal and water gas, representing an expenditure approximately of $35,000,000 per annum. Natural gas is patronized to the extent of $1,700,000; acetylene to the extent of $2,500,000, and oil to the value of $60,000,000.

U.S. Special Agent Crist reports the rapid extension of the Japanese cement factories, which have many advantages of material and labor. He adds that this commodity is one which American manufacturers will reckon and come into competition with, not only throughout the markets of the world, but even in the United States.

Merrell Portable Hand Machines

Nos. 5, 6, 9 and 11

No better machine for the work can be procured.

Power is applied by either crank or ratchet lever to the shaft of the pinion, which engages the geared wheel enclosing the dies.

These machines have our improved cutting-off knife and our standard adjustable quick opening and closing die-head.

You ought to write for a copy of our catalogue which describes these machines in detail.

Just send a post card.

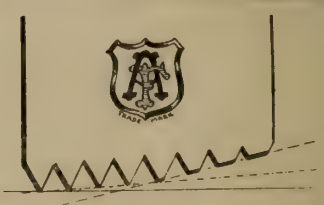
— the pipe with the brand IN it—

We *must* be sure of our pipe's quality to brand a trade mark into the hot metal itself.

The point is to get *you* as sure of P.-H. Pipe as we are—that's why we brand it where you can see the brand.



No dodging responsibility then, is there?

When you make up your mind that quality in pipe is worth paying for—and that nothing but quality *is*—then we will show you that *absolute* quality doesn't imply higher cost.

P.-H. Pipe, even with the guarantee back of it, competes in price with the may-be goods. Will you read the book that tells why Your copy waits for your call.

MUELLER PRESSURE REGULATORS

REGULAR PATTERN

C-100

While high pressure is desired for lawn or garden purposes it is not desired in the house, and most customers would be glad to have a device included in their plumbing that would enable them to have what they want for each use.

A Mueller Pressure Regulator connected in the pipe between the fixtures inside and the sill cock or hydrant outside will reduce pressure to what is wanted in the house without interfering with it for outside uses. It gives the customer the service he desires at each place.

Mueller Pressure Regulators for domestic use are made in two patterns, regular and low reducing. The former will regulate to a medium low pressure only, while the latter will regulate to as low as zero if desired. The regulator illustrated is the regular pattern.

Each regulator bears the Mueller trade mark and is *unconditionally guaranteed.*

We also make a full line of ground key, compression and fuller work for plumbers' use. Catalogues upon request.

HOW TO INVEST YOUR MONEY

to the best advantage

A good investment is one that pays.

The best investment is the one that pays the most.

Here's your chance—and no gamble about it either.

The NATURO Closet

brings big returns in profits and increase of business.

The dealer handling NATURO has sources of trade unknown to outsiders.

In this way he never worries about competition for much business is thrown his way.

Any chance about that ?
Want to know more about it ?

Send for our Illustrated Booklet.

THE NATURO COMPANY

C. H. MUCKENHIRN, President. **Salem, N.J.**

EVERY POINT ABOUT AN OXFORD BOILER IS A PAYING POINT

The dealer who sells this right boiler profits from beginning to end. He profits in the first place because it takes far less time and less skilled labor to install the Oxford —We put it together as far as we can before the dealer ever sees it.

It pays the dealer in the second place, does the Oxford Hot Water Boiler, because it takes less effort to sell it—people needn't know much about boilers to see that the sloping fire-pot walls of the Oxford will save fuel—that the metal push nipple, which does away with rubber gaskets, makes leaks impossible—that the triangular grate-bars with their positive cleaning action make fuel burn up clean.

It pays the dealer in the last place because he can know the job is done for good and to the help of his business reputation once he installs the

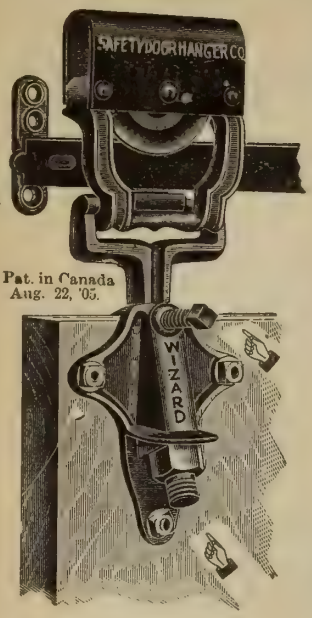
A COMMON SENSE TALK.

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night.

Crowded rooms whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

HOUSE BUILDING IS A SCIENCE NOWADAYS AND NO BUILDING IS COMPLETE WITHOUT ONE OF OUR AEOLIAN VENTILATORS.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building either as to size or as to quality of material.



Ottawa, May 30th, 1901.
Ottawa University,
Messrs. J. W. Harris Co., Limited, Montreal.
Dear Sirs,—Your "Aeolian" Ventilators placed on our University since three years have given us entire satisfaction. Brother Normand.

Dealers everywhere will find a double profit in handling this ventilator. Write direct for catalogue and booklet to-day.

Learn about our system of ventilating. A pleasure to send books.

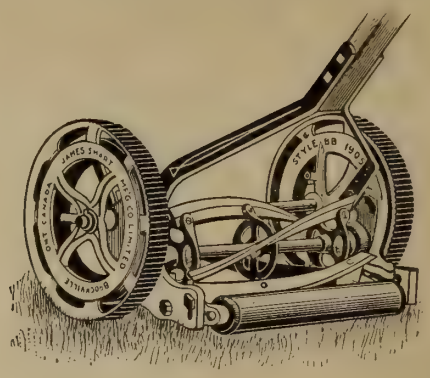
THE "MONTREAL BEAUTY" NIGHT LAMP

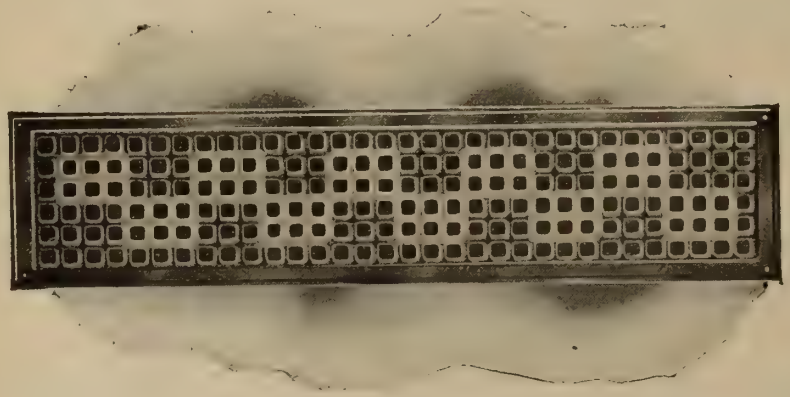
is by far the handsomest, safest, most economical and odorless Night Lamp ever invented.



A Light All Night for ¼ of a Cent.

It burns ordinary coal oil; one filling will burn 40 hours, or four nights, without odor. For Entries, Doorways, Stairways, Bathrooms, or anywhere; and in case of sickness this lamp will be found of great value. Highly recommended by physicians and nurses for invalid rooms.

The lamps are made of brass, nickel plated, they look like electric light when lighted, and will afford a steady light throughout the night. No attention needed; explosion impossible. Size 4 x 6 inches. **Retail at 75c. each.** Liberal discount to the trade.



Correspondence always a pleasure.
Manufactured for

L. J. A. SURVEYER, HARDWARE MERCHANT, 6 ST. LAWRENCE MAIN ST., **MONTREAL**

Lawn Mowers are again in season and the BROCKVILLE line claim your attention for their beauty, usefulness and special value. Lawn Mower Merits

are up for consideration now that ordinary time is on.

THE "WOODYATT"

We ask you to remember these points when discussing our Mowers.

1. Ninety-five per cent. of jobbers carry our machines.
2. Our cylinders are made from the best steel.
3. Our castings are machine made.
4. Every part of our mowers is interchangeable.
5. We employ only skilled workmen.
6. We guarantee our machines.

You cannot be deceived in the quality of Lawn Mowers bearing the name Taylor-Forbes.

That name on a mower means much

LIMITED
OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

GRIPS ANYTHING—

THE

"WRENCH TRADE"

IN YOUR TOWN

INCLUDED

"BULLARD"
COMBINATION
WRENCH

RETURNED
APR 24 1906

It will pay you to educate your trade to buy the best tools. This is not a theory, but a fact. Some mechanics, the world over, buy second or third rate tools because they don't know any better.

If you can induce them to buy the best, and in doing so, show them that it is cheaper in the long run, you will sell a good article, whereas you now sell a cheap one, and your profit will be in proportion.

The **"BULLARD"** Wrench is the best wrench for **any** purpose on the market. This is not our word, but it is the opinion that is voiced by every person who ever used one. Just listen to a few of the "whys."

It is an Automatic Combination Wrench. It does not convert the power applied to the handle into a crushing strain, but is applied in a wringing manner, similar to that that would be effected in using manual means (the hands). It is impossible to crush the lightest pipe with a **"BULLARD"**—all the power goes to **turn** the pipe. A **"BULLARD"** of the same capacity as an ordinary wrench weighs about half as much.

No adjustment necessary—the **"BULLARD"** is always ready.

Requires but one hand to operate it. Can't be cornered, as the jaws take hold without lapping beyond the pipe. No lost motion.

No. 0.	**0**	**inch.**	**to**	**¾ inch.**
No. 1.	**⅛**	**"**	**"**	**1¼ inches**
No. 2.	**⅜**	**"**	**"**	**1⅞ "**
No. 3.	**½**	**"**	**"**	**2½ "**
No. 4.	**¾**	**"**	**"**	**3 "**

For a side partner to the **"BULLARD"** Wrench in any pipe-fitter's kit, there is no better pipe cutter than the **"TRIMO,"** illustrated on this page. These two up-to-date pipe tools make a combination that can't be beaten.

No. 1.– For Pipe ⅛ —1¼ inches
No. 2.— " " ½ —2 "
No. 3.— " " 1¼ —3 "

"TRIMO" PIPE CUTTER

To change Nos. 1 and 2 to 3 wheel cutters, substitute wheels for rolls.

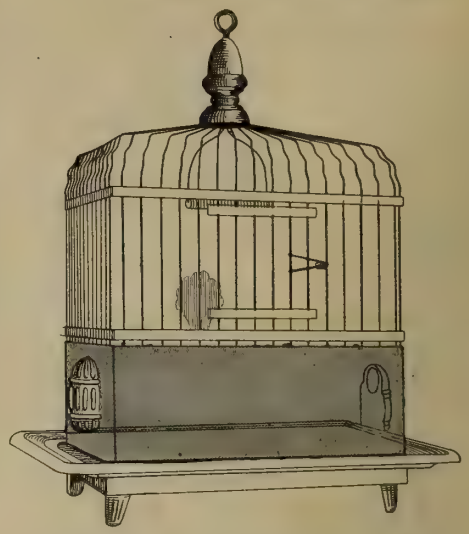
BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.



Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.
Dept. J, Hamilton, Ont.

Stand by the Leader

Some Hardwaremen after being convinced of the selling quality of an article get over impatient at the outset for rapid sales.

It stands to reason that a dealer will sell more

DILLON HINGE-STAY FENCE

after he has been keeping a stock for a while than the first week or two.

The DILLON is the leading wire fence. Put your faith in it; also your energy. The sales will come and stay, and the profits will be sure.

We have a Booklet for you for the asking.

NEWPORT, MON., ENGLAND

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell
THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

Steel Shafting.

Polished, Cold Drawn, absolutely straight and true to size.

We have a large stock in rounds and squares.

A list of the sizes in our stock will show how complete it is.

Our stock of all other lines of iron and steel is equally full.

Rounds in stock :

$\frac{3}{16}$ $\frac{1}{4}$ $\frac{5}{16}$ $\frac{3}{8}$ $\frac{7}{16}$ $\frac{1}{2}$ $\frac{9}{16}$ $\frac{5}{8}$

$\frac{3}{4}$ $\frac{13}{16}$ $\frac{7}{8}$ $\frac{15}{16}$ 1 $1\frac{1}{16}$ $1\frac{1}{8}$

$1\frac{3}{16}$ $1\frac{1}{4}$ $1\frac{5}{16}$ $1\frac{3}{8}$ $1\frac{7}{16}$ $1\frac{1}{2}$

$1\frac{5}{8}$ $1\frac{11}{16}$ $1\frac{3}{4}$ $1\frac{15}{16}$ $2\frac{3}{16}$ $2\frac{7}{16}$

$2\frac{11}{16}$ $2\frac{15}{16}$ $3\frac{7}{16}$ $3\frac{15}{16}$ inch.

Squares in Stock :

$\frac{1}{4}$ $\frac{5}{16}$ $\frac{3}{8}$ $\frac{1}{2}$ $\frac{9}{16}$ $\frac{5}{8}$ $\frac{3}{4}$ inch.

Lengths 14, 16, 18 and 20 feet.

Remember our stock of iron and steel is always complete.

Do you stock more than one kind of iron ?

There is a demand for a superior grade of iron for special uses.

A superior grade of iron is often required by **contractors** for parts of hoisting machinery.

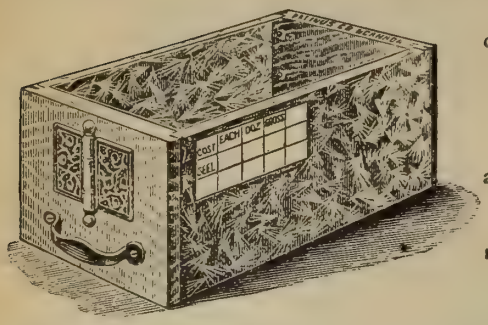
Miners demand safety in their hoisting apparatus and require reliable iron.

Lumbermen need iron they can trust to hold their booms of logs, to repair their chains and for various other uses.

There is more money in selling goods of the first class than in seling cheap goods. This is as true of bar iron as of tin pans.

Lowmoor Bar Iron will meet the requirements of anyone who demands a reliable iron.

It has been submitted to all manner of tests, above all to thetest of experience. It has stood the test.



Lowmoor Bar Iron can be sold at a better profit than common iron. It is not subject to competition. It stands by itself.

Stock **Lowmoor Bar Iron** and make money out of your iron business.

HARDWARE AND STOVE DEALERS ORGANIZE

Successful Convention Held in Toronto, on Good Friday. An Ontario Association Organized and Another Convention Called for May 15-16.

Most encouraging was the response to the hurried call sent out for a convention of Ontario hardware and stove dealers to be held in Toronto on Good Friday. For almost a year a series of articles and letters favoring organization had been appearing in Hardware and Metal, but while there seemed to be a unanimity of opinion that an association was required there was almost as unanimous a desire that somebody else should take the initiative in calling the convention. Even after Mr. Humphries, of Parkhill, had offered early in March to take the initiative if others would back him up the matter dragged along. Finally just about ten days before the holiday Mr. Mowat, of Trenton, wrote to Hardware and Metal asking if the convention was to be held, and his inquiry was followed by two or three others. A hurried consultation was held and as there seemed to be at least half a dozen men in earnest, Mr. Humphries took the responsibility for issuing the call and it was published in Hardware and Metal of April 7, just a week before the holiday. Beyond notifying about two dozen who had sent correspondence regarding the convention no other notification was sent the trade and the response as shown in the list given below was, therefore, especially gratifying.

As one of the speakers at the convention said no movement that had ever lived had been started off with a large attendance. There were always the few who were prepared to make the required sacrifices and undertake the preliminary work as well as the many who would fall in line after the work of organization had been done and the association looked as though it would be a success. There was a sufficiently large attendance on Good Friday to agree upon the necessity of an association and to do the preliminary work of organization. In the face of many difficulties they did this well, wisely leaving the contentious question as to the future affiliation of the association to a larger and more representative convention to be held in the middle of May.

List of Delegates.

Those present at the convention were :

A. W. Humphries, of A. W. Humphries & Son, Parkhill.

W. G. Scott, of Scott & Murphy, Mount Forest.

J. R. Hambly, Barrie.

John Caslor, Toronto.

R. J. Walkem, Tottenham.

Fred W. Otton, of H. H. Otton & Son, Barrie.

John Taylor, of Taylor Bros., Carleton Place.

H. M. Mowat, of Mowat Hardware Co., Trenton.

John McDonald, of John McDonald & Son, Canfield.

D. H. Becker, New Hamburg.

W. G. Pow, of W. R. Hobbs, Tillsonburg.

J. W. Peacock, Toronto.

F. A. Ricard, of Ricard Bros., Verner.

J. Conrad, of Conrad Bros., Waterloo.

J. Coffey, Barrie.

J. R. Callanan, of D. & H. Becker, New Hamburg.

Austin Eaton, of Gurney Oxford Stove Co., Toronto.

S. A. Brubacher, Berlin, representing W. J. McMurtry, T. Buchanan, Fraser Hardware Co., and C. R. Banks, Galt, and G. E. Potter, J. Fennell & Son, and Peter Hymmen, Berlin.

H. T. Hunter, Toronto.

Weston Wrigley, Toronto.

Letters were also received from the following announcing their desire to see an association formed :

James Purvis, of Purvis Bros., Sudbury.

J. Walton Peart, of St. Mary's Hardware, St. Mary's.

J. E. Westcott, Ailsa Craig.

T. N. Dunn, Ingersoll.

W. A. Matthews, of Ross & Matthews, Cannington.

O. M. Hodson, Bolton.

CALL FOR CONVENTION

As decided by the Convention of Hardware Merchants held in Toronto, on Good Friday, all hardware and stove dealers in Ontario are invited to attend another convention to complete the work of organization, on Tuesday and Wednesday, May 15th and 16th, 1906, at St. George's Hall, Toronto. Opening meeting at 10 a.m.

This call is issued jointly by the Provincial Officers of the Retail Hardware and Stove Dealers' Association of Ontario, and the Retail Merchants' Association of Canada.

Special rates will be procurable on all railways as follows :

If 300 are in attendance, single fare ; if 50 or more, fare and one-third. Every delegate should procure a certificate from the railway agent when purchasing his ticket for Toronto.

E. M. Trowern, Secretary, Retail Merchants' Association of Canada.

Weston Wrigley, Secretary, Retail Hardware and Stove Dealers' Association of Ontario.

F. W. Jeffrey, Midland.

V. D. McPherson, Woodville.

C. E. Noble, Dundalk.

A. W. Humphries, mayor of Parkhill, who has taken an active interest in the work for some time past, was moved to the chair, and Weston Wrigley, editor of Hardware and Metal, was elected secretary. Mr. Humphries, after calling the meeting to order, read a short paper on the needs and advantages of such an organization, as follows :

The Convenor's Address.

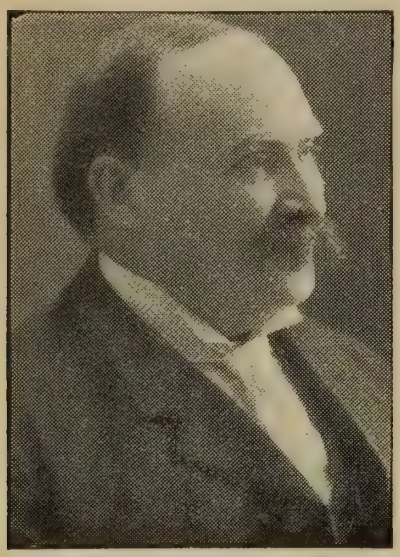
"It gives me pleasure to meet so many hardwaremen here to-day in answer to the request made in Hardware and Metal only one week ago. This in itself is an evidence of the fact that an organization of the hardwaremen in Old Ontario is needed and desired.

"It would seem to me to be impossible to crowd all the business we would like to transact into the short time at our disposal, but it would be a good thing for us to have a heart-to-heart talk on a few of the principal things that concern us all as hardwaremen. No doubt we each have our own opinions as to what is the most important business to transact, but I would think the question that we should first consider is, 'Shall we organize an association ?'

"I believe we are a little late in forming this association, but an old saying is, 'it is better late than never.' We look around and we see organizations of grocers, drygoodsmen, plumbers, painters, druggists, and even hod carriers and laborers. They attend their meetings, where they make their rules and set their prices. Why should we not have some such organization ? It is not because we have no grievances, or that it is not needed ; it is because no one has ever taken the initiative. We have an excellent paper in Hardware and Metal. It has a large circulation, is closely read and is considered an authority, and I may say that it is largely due to its interest in the hardware trade that we are here to-day, and that this organization is about to become a fact.

"What will be the objects of this association ? I will suggest some things that we might well consider : There is the cutting of prices among retailers, the selling of goods by wholesalers to men not in business, the credit system and the excessive freight and express rates.

"Gentlemen, if we decide to go on here to-day, let every man be an enthusiast. If we organize, let us go into the organization heartily and with a will, and it will be a success. If we are careless and indifferent it will fall to the ground."



An expression of opinion was then asked from the delegates present, when it was conceded by all that the hardwaremen must do something if they would prevent their trade from being altogether demoralized.

Trade Evils Complained of.

J. R. Hambly, Barrie, said he had thought a great deal about the movement and he was in fullest sympathy with it. Although in Barrie the hardware merchants worked together and there was not the cutting that he understood existed in other towns, still there had been great trouble caused from this source in the smaller places around.

W. G. Scott, Mount Forest, said he thought the hardwaremen were the slowest of all the tradesmen in the province. "Everything is organized," said Mr. Scott, "and why not our trade ? The wholesalers have reduced their terms in some cases from six months to ten days and while the hardwareman is compelled to pay cash for his goods, he has to give time to his customers, and usually has to wait until the end of the year for his money. The customer presumes upon the good nature of the dealer, and there is no redress." Mr. Scott spoke of an organization that was once formed, and

was doing very well until some members thought they could import their goods and do away with the wholesale houses; this was wrong. He spoke also of the way in which druggists were handling lamp goods, cutlery, oils, paints, brush-

A. W. Humphries, Parkhill,
Pr sident of Retail Hardware and Stove Dealers' Association.

es and varnishes, and it was only a short time ago, too, that the druggists tried to have legislation passed to prohibit hardwaremen selling paris green. Paying cartage to the wholesalers at point of shipment was another thing to be remedied. This was sometimes charged when a siding ran right into the warehouse, and no cartage necessary. The railway and the express people must also be brought to time, said Mr. Scott.

W. G. Pow, of Tillsonburg, spoke of trouble often made by the publication of wholesale prices in the daily newspapers. These prices were misleading to the customer as to the profits made on goods.

R. J. Walkem, Tottenham, told of how churns, fence wire, rope, etc., were sold by implement dealers below cost to further the other end of their business.

The Old Association.

John Caslor, who was treasurer of the Hardware Dealers' Association organized four years ago, recalled the prosperity they had until they affiliated with the Retail Merchants' Association, after which they did not get along very well and soon were forced to disband. Mr. Caslor believed the interests of the hardwaremen could be best served by standing on their own feet independent of the Retail Merchants' Association. He cited cases where during the life of the old association many grievances were removed. In paint they insisted that the manufacturers should not sell to those who cut all the profit away, and they won their point. Mr. Caslor concluded by saying he did not see why goods should be sold without a profit.

F. W. Otton, of Barrie, said he was certain the trade was being held up by the express and the railroad people, and he thought, too, that something should be done to stop wholesale houses selling to contractors. He told of cases where small builders bought goods cheaper than he could buy them.

H. M. Mowat, of Trenton, after expressing hope that the good work commenced will go on, instanced his own case where not one cent had been made on $6,000 worth of certain goods he sold last year. These were staples such as cement, nails and wire.

Sympathy with the movement was also expressed by D. Becker, of New Hamburg, who thought a good organizer should go from county to county and do missionary work.

J. Taylor, of Taylor Bros., Carleton Place, said his firm never paid cartage charges when the contracts read F.O.B. place of shipment. He said the excessive charges in express rates were often errors, and recommended that merchants have a copy of express tariff for continual reference. He thought that the boxing charges by manufacturers and jobbers were an outrage, and said the dealers did not get paid for wrapping paper when they sent goods out. He also spoke of the extra charges made by railway companies on combined shipments, and the evils of price-cutting so prevalent just now, and in closing said that the wholesale hardwaremen were imposing on the retailers just a little too much.

Others spoke along similar lines and brought to light many grievances that had to be removed if those in the trade were to make a living profit at all, and all felt that the time had come when organized effort was needed.

Committees were appointed as follows:

On permanent organization, John Caslor, Toronto, F. W. Otton, Barrie, and John Taylor, Carleton Place.

On procedure, R. J. Walkem, Tottenham, S. Brubacker, Berlin, and J. R. Hambly, Barrie.

On resolutions, J. Conrad, Waterloo, J. W. Peacock, Toronto, W. G. Pow, Tillsonburg, and Austin Eaton, Toronto

AFTERNOON SESSION.

The convention adjourned at 12.45 and reassembled at 2.15, when the committee reports were received. The committee on procedure's order of business was adopted, as was also a resolution reported by the resolution committee favoring the organization of an association of hardware and stove dealers. The committee on permanent organization reported: "That we are in favor of organizing a retail hardware and stove dealers' association for the Province of Ontario. Through this medium we hope to bring all the retail hardware and stove dealers of Ontario into closer sympathy one with another whereby the grievances peculiar to each locality may by concerted action be adjusted or eliminated. We also recommend that an annual fee of ten dollars, payable semi-annually, be charged each member." On motion the report was adopted minus the clause relating to fees, which was laid on the table for further discussion.

Addresses were then delivered by E. M. Trowern, secretary of the Retail Merchants' Association of Canada, and H. N. Joy, of the Joy Manufacturing Co., of Toronto. E. R. Rogers, former chairman of the defunct hardware section of the Retail Merchants' Association, was invited to be present but was unable to attend.

Mr. Trowern's Address.

Mr. Trowern commenced by saying that any effort to form a retail hardware merchants' association separate from the Dominion Retail Merchants' Association would be a step backwards. "In the retail jewellers' association," said he, "we were absolutely helpless, and it is from the experience I gained in this attempt that I have learned that we must work with the Retail Merchants' Association. The manufacturers work in a whole organization, as do also the labor unions. They are united in aim though their interests are sectional, and you might just as well try to raise yourself up by your boot straps as to succeed separately. What could you have done with the Assessment Act? Nothing. By united action we have made more money than will pay your fees for twenty years. What can you do in the collection of small debts? What can you do as hardwaremen in the way of legislation for the collection of small debts? Absolutely nothing. When we were formed ten years ago we found we were handicapped because we were not sufficiently organized. We appealed to our wholesale houses and they immediately asked us how far our organization extended.

I visited Winnipeg at the time of the retail merchants' convention and laid our claims before them, and they saw the same difficulty we saw in Ontario. They had formed their different sections of trades but found they could do nothing without the larger association, and for you to try to form a separate association. I say again, is a step backward. How are you to establish your organization in every part of the country? Our organizer calls on every branch of the trade when he is in a town, but the hardware organizer must spend all his labors for only one trade. Whatever you do, do it right. Don't try to pull down what other merchants have built up." Mr. Trowern went on to say that they had every decent hardwareman in over one hundred towns in Ontario already in an organization.

J. R. Hambly, Barrie,
Second Vice-President Retail Hardware and Stove Dealers' Association.

Secretary Wrigley replied to this last statement by calling attention to the large number of men present who knew nothing of any such organization, several of them being from towns where a hardware branch of the Retail Merchants'

Association was supposed to exist, and referred to letters from several hardwaremen in other such towns expressing a hope that a purely hardware association be formed. In reply to a question from Mr. Wrigley as to whether a re-

Weston Wrigley, Toronto,
Secretary Retail Hardware and Stove Dealers' Association.

tail hardware dealers' association would have the co-operation of the Retail Merchants' Association, Mr. Trowern said: "I may as well make myself clear on this thing; if you go ahead and form an independent association you may expect to receive absolutely no help or co-operation whatever from us."

Mr. Trowern's whole attitude throughout the meeting seemed to be antagonistic and defiant, and his expressions were not well received by those who had the interests of the trade at heart. Very few of those present had ever heard of the organization said to exist and those who did know of it expressed themselves as being dissatisfied with it and in favor of a distinct and separate organization that could deal with grievances peculiar to the trade. In many groceries and general stores hardware lines were carried simply as a bait, and it would certainly seem that the general organization would have a great deal of trouble in dealing with such cases when they were all in the same organization. Mr. Trowern finally admitted that the hardware section of the Retail Merchants' Association had no officers and had never held a meeting, although membership fees had been collected from many hardware merchants by the association of which he was secretary.

Man of Experience Speaks.

H. N. Joy, of the Joy Manufacturing Co., Toronto, who had been for many years connected with the National Hardware Association, and president of the Retail Hardware and Stove Dealers' Association of North Dakota, spoke of the good results they had achieved. "Trade organizations are necessary," said Mr. Joy. "It may be that you can accomplish more work by being banded with other bodies, but my experience has been that in the hardware trade they have made a failure of it whenever joined to another organization. This was particularly true of South Dakota, where the hardware merchants had first joined a retail merchants' association, and being outvoted and failing to have their grievances adjusted, at last had to withdraw and form a purely hardware and stove dealers' association. The hardwaremen in North Dakota meet yearly and are eager to attend conventions. They devise ways and means to overcome difficulties, and give and receive advice for the general welfare of the trade. I am thoroughly committed to the idea of an independent organization, and if I were eligible for membership I would use my vote and experience in forming an independent association. The elements of success," said Mr. Joy, "are faith and persistency of a few. You can do just as well in matters of legislation as you could were you in with the Retail Merchants' Association, and there are some things which you can do only when independent."

S. Brubacker, Berlin, who represented several hardwaremen in Waterloo county, spoke on the advantages of an affiliation with the Retail Merchants' Association, he being Western Ontario organizer for the association. He read a list of 112 towns and cities in Ontario in which the hardwaremen are said to be already organized in his association.

The Dues Question.

H. T. Hunter, Toronto, speaking of the dues members should pay, did not favor a merely nominal amount, but thought the interests of the organization could be best served by the adoption of a reasonably large fee. He would rather, he said, ask a man for $10 than for $2 were he soliciting membership. With the payment of the larger amount the dealer would naturally take a deeper interest in the association, would feel that it was strong and organized for a purpose. With a small fee there might exist a feeling that the association did not amount to much. If the association could not make itself worth $10 per year to its members it was hardly worth organizing it.

Following this general discussion it was decided that the name of the association was to be the "Retail Hardware and Stove Dealers' Association of the Province of Ontario," and the provisional officers elected were instructed to confer with a committee of the hardware dealers now in the Retail Merchants' Association with a view to holding a joint convention of all hardware and stove dealers in Ontario in Toronto on May 15 and 16, when a decision will be reached on the question of affiliating with the Retail Merchants' Association as a hardware section or of organizing as a distinctly hardware and stove dealers' organization, co-operating only with other merchants' associations in matters of legislation and regarding evils jointly affecting these various branches of trade.

Officers Elected.

The election of provisional officers was then proceeded with, those chosen being as follows:

A. W. Humphries, Parkhill, president.
W. G. Scott, Mount Forest, first vice-president.
J. R. Hambly, Barrie, second vice-president.
John Caslor, Toronto, treasurer.
Weston Wrigley, Toronto, secretary.

The various details of the provisional organization were left in the hands of the officers as an executive committee until the big convention on May 15 and the convention adjourned at 5 p.m.

CONVENTION ECHOES.

J. E. Westcott, Ailsa Craig, in a letter stating that he would be unable to attend the convention, said: "The whole movement has my entire sympathy and I am perfectly willing to do my share towards forming an association which we all know is so badly needed."

O. M. Hodson, Bolton, expected to attend the convention but was unable to do so. He states that he has sold his business and will be willing to assist in the work of organization as he had intended taking up the work of forming an association as soon as he had completed his collections.

W. A. Matthews, Cannington, wrote saying that a branch of the Retail Merchants' Association had been organized there. "We were led to believe that the above association was covering all the lines and that the different branches of business could meet and do business peculiar to their class," said Mr. Matthews.

J. R. Hambly, Barrie, was formerly of the firm of Hambly & Baker. Mr. Baker, however, disposed of his share of the business to Mr. Hambly in February after being a member of the firm for three years.

W. G. Scott, of Mount Forest, was taken ill on his return from the convention and is now under the doctor's care. Being also a delegate to the Lacrosse Association convention on Good Friday he was unable to attend the afternoon session. He left a most favorable impression with his fellow hardwaremen, however, owing to his short, business-like addresses during the morning. He

John Caslor, Toronto.
Treasurer Retail Hardware and Stove Dealers' Association.

stated that he was a member of the Mount Forest branch of the Retail Merchants' Association, but was decidedly opposed to the new hardware association becoming a branch of that body. He would retain his membership in the re-

tail merchants, but he wanted to be a member of a purely hardware organization. In the Retail Merchants' Association he had no way of combatting the druggist who sold the numerous hardware lines and wanted to prevent him selling paris green.

The suggestion thrown out by John Taylor, Carleton Place, that the trade refuse to pay cartage fees, charging them back to the jobbers in accordance with the f.o.b. clause in the purchasing agreement, was considered worth sufficient to pay every delegate's expenses to the convention. "If f.o.b. means anything," said Mr. Taylor, "it means free on board the cars at the shipping point."

President Humphries, as mayor of Parkhill, recently fought the representatives of the Grand Trunk and Canadian Pacific to a standstill before the Railway Commission, winning every point contended for and forcing the railways to instal an electric flash and bell apparatus at a dangerous crossing in his town, this being the only one of these life-saving devices yet installed in Canada.

The attendance at the convention of three clerks, Messrs. Pow, Coffey and Callanan, indicates keen interest in the organization by the salesmen and is a proof of their progressiveness. Mr. Callanan made a good point when he said he, as a clerk, found it difficult to meet the price-cutting done by merchants who sold their own goods. They could cut prices but he could not do so. With an association this evil could be remedied.

F. A. Ricard, of Verner, told of the peculiar difficulties of doing business in New Ontario. In spite of high freight rates wire goods had to be sold at less than cost because of general store competition. Mr. Ricard said he couldn't speak the English language very well, but before he got through the delegates agreed that if he had any more to learn he would be near the top of his class when the lesson was finished.

J. Walton Peart, of the St. Marys Hardware Company, wrote as follows: "I regret very much that I shall not be able to attend the organization meeting on Friday next in the flesh, but can assure you I will be with you in the spirit. Having until quite recently been engaged as accountant with the Maxwell firm here, my experience has taught me the benefit to be derived from organizations such as is now proposed for retailers, an organization which my short experience in the retail business has shown me is absolutely essential to the keeping of the retail hardware upon a basis where at least a fair profit is obtainable. C. E. Noble's complaints in to-day's issue of Hardware and Metal hit conditions here pretty fairly. We have a flour and feed store which handles a few lines of small hardware, some shovels, forks and a few other lines at such a low margin as to leave us with very little profit, and we also have the competition of a 'Parson's Fair' store, which requires no comment. If retailers could combine and give such 'side liners' to understand that if they did not get fair margins of profit the wholesale houses would be induced to cut off their supply, good results might accrue, but certainly no other course will do it. Wire nails, for example, are selling here at $2.16 base, turpentine at $1.10, boiled oil at 57c., etc., and unless something is done the matter looks serious—in short, we will all have to go west. Freight rates, cartage at shipping points, insurance, peddlers' fees, central buying office, collection of old accounts, and many other matters might be very well discussed at your meeting and I most sincerely hope that you will have a good turnout, and if not large, I hope it may be sufficiently enthusiastic to warrant and insure the organization of a live and useful association for the retailer. Any duties that may be assigned to me personally I shall be happy to look after to the best of my ability, and if my experience with accounts and general office work can be of any service to you I am at your command at any time. You may enroll the St. Marys Hardware as a member, with their best wishes for your success."

James Purvis, of Purvis Bros., Sudbury, wrote saying: "I am heartily in sympathy with any improvement that will lead to a better understanding between hardwaremen and incidentally of better profits than we now get on many of the leading staples, such as wire nails, barbed wire, white lead, linseed oil. Maple Leaf cross-cut saws, bar iron, and many other lines which I could mention. If the average hardwareman will sit down and figure up what the big staples in his business amount to and on which he practically loses money, he will see what a disproportionate amount of profit he is asking his other lines to bear, if he means to keep out of the hands of the sheriff. I regret that I will be unable to be present at this meeting for organization, but can assure the hardware trade that anything I can do in reason to promote more satisfactory conditions in the hardware trade in my section I will have much pleasure in doing it."

WELL KNOWN HARDWAREMAN DEAD.

John M. Bond, president of the Bond Hardware Co., of Guelph, died with startling suddenness Tuesday while in Montreal. Mr. Bond reached Montreal on Monday, 16th inst., and registered at the Windsor. He appeared in good health and in the afternoon attended the Practice Court where he was defendant in a small suit brought against the company by an agent in connection with commission. Mr. Bond was in the witness box giving evidence and was being examined by Mr. Andrew Macmaster. The testimony had barely commenced when Mr. Bond was seen to raise his hand to his left side, and was seized with a choking sensation. The case was stopped, and Mr. Bond was removed from the room, placed in a cab and driven to St. Lawrence Hall, accompanied by Mr. F. S. McLennan, K.C., and Mr. J. S. Miller, secretary-treasurer of the Bond Co. On arriving at the hall it was at once seen that Mr. Bond's condition was very serious, and he was driven to the Royal Victoria Hospital. On reaching that institution Dr. Cameron pronounced Mr. Bond to be dead. Heart disease is given as the cause. The late Mr. Bond had many friends in Montreal and Toronto, where in business circles he was well known. He had large real estate interests in Montreal and owned considerable property on Craig street. He was 69 years of age and was reported to have been enjoying good health up to the time of the attack on Monday last. The body was removed to Guelph for interment.

Mr. Bond, it will be remembered, was a passenger on the wrecked Scotsman some years ago, one of the Dominion liners, and at the time was aided by the Montreal police in recovering some of his property which was lost on Belle Isle where the unlucky passengers had been landed.

For the past half century he has been engaged in the hardware business at Guelph. He was born in Queen's County, Ireland, and when he first came to Canada engaged with the late Rice Lewis of Toronto. In 1865 he located at Guelph and for two or three years was associated with the Mulholland hardware business. He then assumed proprietorship of the business. A year ago the business was converted into a joint stock company.

TRAVELER'S SUDDEN DEATH.

Death came suddenly last week to Duncan S. Macintyre, a well known hardware dealer of Montreal, and latterly of the Sur-Coat Manufacturing Co., of Detroit and Windsor,. Deceased was stricken with appoplexy in the King Edward Hotel, Toronto, and died in the Emergency Hospital a few hours later. Mr. Macintyre had just passed his fiftieth birthday and was widely known in Montreal where he resided for many years.

The first work in which he engaged, after graduating from Upper Canada College, Toronto, was with the old firm firm of Benny, Macpherson & Co, of Montreal, who were for many years prominent in hardware circles. After severing his connection with this firm Mr. Macintyre engaged in business for himself, his principal line being railway supplies.

He was a son of the late John Macintyre, of Fort William, for many years a Hudson Bay factor and later Government Indian agent.

BINDER TWINE PRICES.

Attention has been called to the agreement made between the Ontario Government and W. B. Converse, manufacturer of binder twine at the Central Prison, wherein it is provided that twine shall be sold to farmers in Ontario at an advance of one cent a pound on the price of manufacturing. The result of this agreement fixes the price of binder twine at 9c., 10c. and 11c. per pound, according to the lengths, or equal to one cent a pound less than dealers are paying other manufacturers for it. It will be remembered, though, that a similar agreement to this has existed during the past year without any detriment to the trade. The binder twine output of Central Prison is, at the most, only a small amount compared with what other manufacturers produce, and heretofore it has not been a factor in price setting.

HARDWARE TRADE GOSSIP

Ontario.

Bennett & Co., machinists, Essex, have assigned.

Joseph Laing, of Joseph Laing & Son, Ridgetown, is dead.

Warden King, of Montreal, was in Toronto on Wednesday.

Louis Payette, of Montreal, was in Toronto during the week.

J. M. Robertson, Tweed, spent the Easter holidays in Toronto.

S. Norfolk, blacksmith, Latchford, is laying in a stock of hardware.

Mr. Davey, of Ingram & Davey, St. Thomas, is laid up in the hospital with a rather serious illness.

Ira and Bert Gerry will open a hardware store on May 1 at Fort William, and will be known as Gerry Bros.

George Hope, of Adam Hope & Company, metal merchants, Hamilton, was a visitor in Toronto during the week.

H. F. Foster, of the James Robertson Company, Toronto, is recovering from a severe attack of rheumatic fever.

Drummond, McCall & Company are moving into their new metal warehouse at 86 Front street east, Toronto, this week.

J. W. Falls & Son, Wiarton, who recently sold their hardware stock to Messrs. Kyle & Hunter, are now engaged in manufacturing small gasoline engines and row boats.

W. J. Wall, Montreal, Canadian representative of the J. L. Mott Iron Works, New York, was a visitor in Toronto this week, going on to Hamilton and New York on Thursday.

W. A. Duncan has succeeded Frank L. Maddock as one of the Western Ontario representatives of the Kemp Manufacturing Company, W. A. Thayer, of the sales department, succeeding Mr. Duncan as city traveler in Toronto.

Quebec.

Vermette & Corriveau have been registered as hardware merchants at Montreal.

E. B. Ryan, of the staff of Lewis Bros. Company, spent the holidays in New York.

W. H. Graham, of J. H. Graham & Company, New York, was in Montreal this week.

W. H. Evans, of the Canada Paint Company, spent the Easter holidays in New York.

J. B. Learmont, of Caverhill, Learmont & Company, has gone south for a short holiday.

Wm. McMaster, managing director of the Montreal Rolling Mills Company, is expected home on May 1.

J. H. Helm, of Port Hope, called on some of the leading wholesale houses in Montreal early in the week.

J. E. Majeau, of L'Epiphanie, and Alfred Majeau, of Joliette, spent their Easter holidays in Montreal.

P. Gaudet, a well known merchant of St. Ours, Que., was in Montreal this week ordering some new stock.

W. R. Stavert, the capable Montreal representative of the Jenkins valves, Boston, reports trade in his lines excellent.

T. H. Newman, of Caverhill, Learmont & Co., returned from New York on Monday after an extended sojourn down south.

Albert Pontbriand, of the Pontbriand Company, Sorel, visited Montreal for Easter and took advantage of the trip to lay in a new stock of special lines.

J. B. Smith, acting secretary of the Lewis Bros. Company, is receiving the condolence of the trade in the death of his father, which took place last Monday.

D. Lorne McGibbon, managing director of the Canadian Rubber Company, of Montreal, who is now holidaying in the Bermudas, is expected home on the 26th.

J. Craig is the latest acquisition to the sales staff of the Lewis Bros. Company. He spent this week in Montreal prior to taking up his territory in Ontario and will make his headquarters Toronto.

Among the visitors to Montreal this week were N. Nemo, of the Canadian Company of South Paspebiac; W. B. Sweet, of Mountain; T. Haskell, of the Haskell Lumber Co., of Fassett; and E. E. Johnston, of Lansdowne.

The F. W. Powell Roofing Company have recently erected on the new C. W. Lindsay Company's up town piano warehouse what is described by Mr. Powell as the largest metal cornice ever put up in Montreal. The work is certainly very beautiful and has been much praised in the trade.

The James Walker Hardware Company have moved into their handsome new premises on St. James street, Montreal, just opposite their former stand. The new store is a model of modern completeness and reaches through to Notre Dame street, showing a nice frontage on two streets.

W. F. Canavan, one of the most energetic of Montreal's young manufacturers' agents, has secured the sole agency for the east of the Forsyth Manufacturing Company, of Buffalo, N.Y. This firm make an attractive line of bath room accessories, such as brush holders, towel bars, tumbler holders, etc.

D. Colville, of the David Colville & Sons Company, Motherwell, Scotland, is visiting Montreal and Canada just now. His firm is one of the largest makers of steel plates in the Old Country. They are manufacturers to the admiralty, and their brand, the "Dalziel," is one of the most reliable and best known in the trade.

Western Canada.

Hunter Smith, of Brandon, was in Winnipeg last week.

It is rumored that a new hardware store is to be opened in Balcarres.

Geo. McIntosh, Vonda, Sask., is about ready to open up his new hardware store.

A new hardware store has been started in Lemberg, Sask., by Marshall & Whittlaufer.

The Lemberg Hardware Co., of Lemberg, Sask., have sold out their business to Teskey Bros.

G. F. Stephens returned to Winnipeg early in the month from a short pleasure trip to California.

John A. Thomson, hardware merchant of Elm Creek, Man., was in Winnipeg last week on a business and pleasure trip.

J. Taylor Webb, Winnipeg manager of the Thos. Davidson Mfg. Co., has been seriously ill during the last fortnight, but he is now rapidly recovering.

Marshall-Wells Co., of Winnipeg, are sending to their customers a memorial letter announcing the recent death of their vice-president and manager, W. G. McFarlane.

Burglars attempted an entry to the hardware store of C. A. Baskerville, Winnipeg, one night last week, but an alarm being given in time they secured no goods or money.

The Moose Mountain Hardware & Lumber Co. are pulling down their old warehouse in Arcola and building an up-to-date hardware store and new lumber sheds. The main store will be 70 x 25 feet in dimensions. It will be lighted with acetylene gas and will have a metallic ceiling.

Secretary J. E. McRobie, of the Western Retail Hardware Association, was in Lemberg last week attending a local organization meeting of the hardware dealers of the Kirkella district. A large number of hardwaremen were in attendance and a meeting that began at 9 p.m. did not break up until 2.30 the next morning. A. A. Hunt, of Hunt & Ross, Abernethy, was elected chairman for the district.

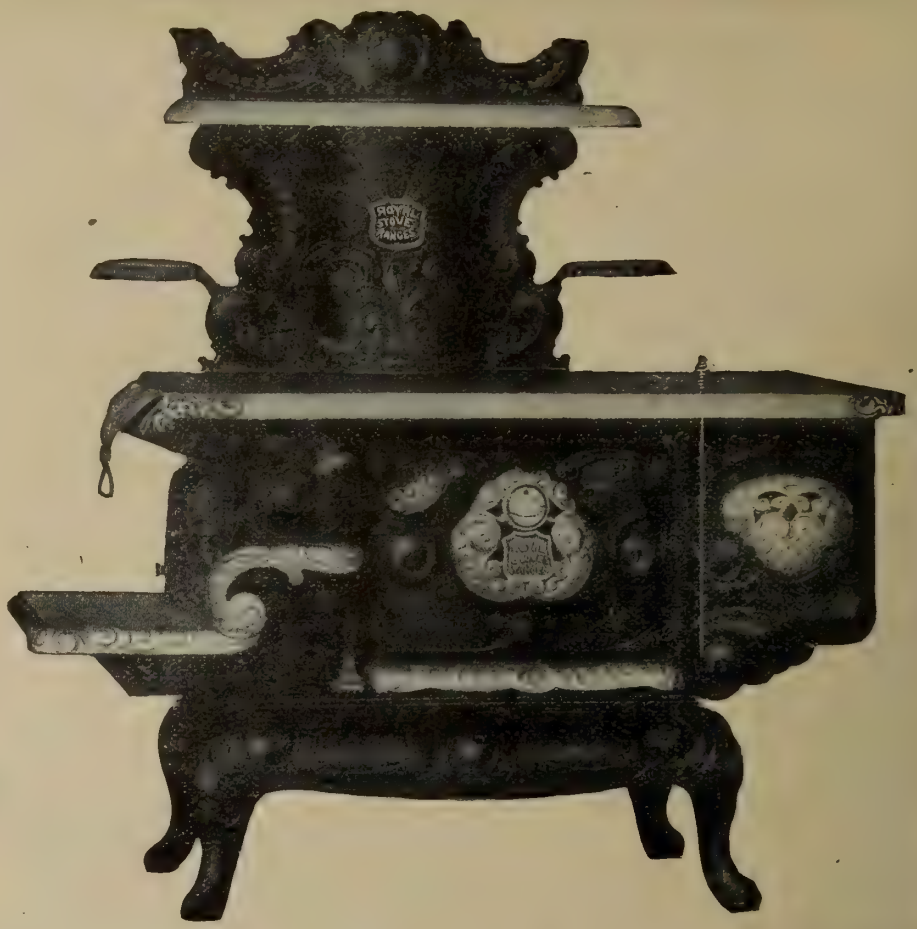
PRESENTATION TO R. J. YONGE.

At a complimentary banquet tendered to Hon. Rudolphe Lemieux, solicitor general, and Mr. R. J. Yonge, former general secretary of the Canadian Manufacturers' Association, by the Toronto branch of that association on Thursday evening, Mr. Yonge, who is now sales manager of the Canadian Rubber Co., was presented with an illuminated address together with a gold watch, chain and locket as a token of their appreciation of his labors while secretary of the association. C. C. Ballantyne, Montreal, president of the association, made the presentation and announced that Mr. Yonge had that afternoon been accepted as a full fledged member of the body of which he had been secretary. W. S. Fisher, of Emerson & Fisher, St. John, was to have been present at the banquet but was detained.

NOW

a range with the pouch feed is better than a range without that feature; and a range to have the pouch feed must be one of the Royal Family.

Royal Corona Range



with its simple, yet perfect, construction, makes kitchen work a pleasure.

If a dealer wants to have quick sales let him put in one or two "CORONAS." They sell on sight.

"Everything for the Tinshop."

AVOID TROUBLE

Most people have all of the trouble they can take care of without "courting it."

Stove Troubles

are not only reduced to the minimum but are absolutely obliterated by handling

"The JOY MALLEABLE RANGE"

No breakages in shipping, delivering, setting up or moving. Who ever superintended the delivery, setting up or moving of a cast-constructed Range without warning the assistants to "be careful and not break it?" No such warning necessary when handling "THE JOY." Why don't you avoid these troubles for yourself and your patrons by selling the only Range made in Canada that is immune?

A card means connections.

Joy Mfg. Co.

32 Humberside Ave. ...Toronto

BUSINESS IS YOURS IF THE EMPIRE QUEEN RANGE

is a part of your stock. There are some good stoves, some better stoves, but The Empire Queen is the best. For proof of this examine the construction of our range. You will find it is made to be an ideal baker as well as heater. Every particle of heat is used. The range is neat in appearance, as the illustration shows.

Why don't you sell them?

The Canadian Heating & Ventilating Co.
OWEN SOUND, Ontario Limited.

THE CHRISTIE BROS. CO., Limited, 238 King St., Winnipeg, Man., Western Agents.

THE CANADA STOVE AND FURNITURE CO., 126 West Craig St., Montreal, Que., Agents for the Province of Quebec.

Put a "200 Series" Range up front—

AND SEE IT SELL ITSELF!

¶ If there ever was a range that did its own talking, it's the new "200 Series" of the Oxford Chancellor Range,—burns wood or coal. ¶ 'Tisn't merely the extremely handsome appearance of these ranges,—though that point does help a lot. It's their visible value,—the design of them, the work-saving ideas that are in them, the common sense of their design. ¶ The woman who sees an Oxford Chancellor is half way toward buying it,—when she examines it, she goes the rest of the way. ¶ You do a quarter of the talking, and the range will do the rest. ¶ Isn't that the kind of a steel plate range you ought to have on your floor right now? ¶ May we send you a catalog and a proposition?

WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and Complete Hotel Kitchen Outfits, Hot Water and Steam Boilers and Radiators, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

NEW ADVERTISEMENTS.

Barrett, Jos., & Sons, Petrolia.
Chicago Spring Butt Co., Chicago.

THE GOOD FRIDAY CONVENTION.

The retail hardware and stove trades in Ontario are to be congratulated upon the success of the gathering held in the Rossin House parlors in Toronto on Good Friday, a report of which is given in this issue. This is an age of organization, and the trade in Ontario have taken action none too soon. Reports of price-cutting on various lines come from all quarters, the effects of which are bound to be felt by manufacturers and jobbers as well as by the retail dealers themselves. Numerous other evils also exist which can only be remedied by organized action by the retail trade.

The real issue which presented itself at the convention was not the problem of organization—the necessity of which was unanimously agreed upon—but the style of association to be formed. The majority favored a straight hardware and stove association, governing itself, collecting its own fees, remedying its own evils and co-operating with every other organization of merchants in matters of legislation and other evils which affect all branches of trade alike. The representatives of the Retail Merchants' Association present, who probably hold the honest belief that their style of organization is the best, seemed to consider, however, that all who did not think as they did were destructive, if not dishonest. The threat made that the Retail Merchants' Association would refuse to co-operate with the hardwaremen if the latter did not come under the wing of the older association was most unfortunate and only served to injure those who made it.

The question of affiliation, despite the unanimous feeling at the convention, was wisely left over until the larger gathering to be held next month, when every hardware and stove dealer in the province should be on hand to join the new organization and help in deciding the questions at issue. Between now and the time of the next convention these matters should be thoroughly discussed and the columns of Hardware and Metal are open to any merchant who has reasons to present either for a straight hardware and stove association or in favor of affiliation with the Retail Merchants' Association.

Hardware and Metal believes, with the majority at the convention, that the trade should be organized on a purely separate basis, unaffiliated but working in harmony with the Retail Merchants' Association or any other body in matters of legislation, etc. It believes that the whole structure of the Retail Merchants' Association is a weak one and with the aid of its readers it hopes to thoroughly thresh out this subject during the short interval preceding the date of the coming convention.

The claim made at the convention that the Western Retail Hardware and Stove Dealers' Association had merged itself into the Retail Merchants' Association is effectually disproven in another editorial on this page, the information being authoritative and direct from Winnipeg this week. There is a world of difference between affiliation for certain purposes and complete amalgamation. The chief duty of the "Western Board," which gets a small per capita tax from each association, is to look after any legislation in the common interest of all retailers. That is as far as the affiliation goes and there still remain two separate associations.

AFFILIATED—NOT AMALGAMATED

There seems to be an erroneous impression that the two retail associations of the west—the Retail Hardware and the General Merchants'—have been merged into one body. So widespread is this impression that one is tempted to believe that the principal result of the February meetings has been to create confusion in the minds of the western trade.

The prevailing opinion is quite incorrect. The two associations have not been merged in one body; each retains its own executive, its own secretary and its own separate existence. The work of the two associations is conducted separately and to some extent, perhaps, their interests may conflict. As was outlined in a recent editorial in these columns, there is some conflict at present between the straight hardware store and the general store that handles hardware as a side line and often sells it at a sacrifice for advertising purposes. This is a question for negotiation between the two associations and there is good reason to believe that a satisfactory compromise can be arranged. The hardware man does not object to the general store selling hardware provided it is sold at a living profit and not as a sacrifice in order to attract customers to the general store to buy other goods. On this basis it is probable that an agreement can be arranged, but it must be clearly understood that the Retail Hardware Association of the west retains its separate identity and is quite prepared to protect its own members.

But while the two associations retain their own separate organizations it is recognized that there are some objects which they have in common and for that purpose they elected last February, in joint session, a "Western Board" composed of hardwaremen and general merchants. It is the chief duty of this body to watch all legislation affecting the interests of retailers. Probably it was the organization of this board that was responsible for the wrong impression that prevails at present among the hardware trade.

ANOTHER RAILWAY.

If proof were wanting of the confidence which the shrewdest capitalists repose in the future of the Canadian West, it is afforded by the definite announcement by James J. Hill of his intention to extend the Great Northern to Canada and build from Winnipeg to the Pacific coast. It is even hinted that it is his intention to build a transcontinental, but however that may be, Western Canada is now assured of four trunk lines. The Great Northern lines in the west will be completed as soon as the Grand Trunk Pacific, and thus there will be two new arteries draining the rich transportation areas hitherto jointly and jealously conserved by the Canadian Pacific and the Canadian Northern.

A few eastern papers hold to the view that the Hill invasion is unfortunate from the standpoint of Canada's national development as the Great Northern will divert to the south trade which should be retained in Canadian channels. But it is impossible to prevent communication with the south even if that were desirable, and the Canadian roads

will be compelled in self-defence to allow rates from east to west that will permit Eastern Canada manufacturers to compete with the Americans.

The new road will be another important factor in the development of the Great West, and as such it should be welcomed by Cananians in every province.

TRAINING OF TRAVELERS.

U. S. Consul Twells, of Carlsbad, tells in the Daily Consular and Trade Reports how commercial travelers are trained in Austria. While it is not suggested that the same kind of training is better than ours or is suitable to conditions here, the recital is interesting.

"Most of the commercial travelers in Austria are men who have been at school at least from eight to ten years, i.e., from their sixth to their fourteenth or sixteenth year. After leaving school they entered a retail or wholesale shop or warehouse, where they have had to serve three years as apprentices (lehrknabe)—generally without salary; later on, perhaps, they get some pocket money. Lodging, food, and clothing has to be provided by their parents or guardians. After three years a "lehrknabe" becomes "free," and commences with a salary of from $6 to $10 a month. He is now either salesman (commis) or is transferred to the stock room (magazineur). Thence the intelligent youths are taken to become commercial travelers, being sent at first to the neighboring small villages to visit the country dealers. About $16 a month and $1.25 to $1.50 for traveling expenses a day is the usual payment for the first and second year after apprenticeship. Later the salary is increased and higher traveling expenses are granted. The salaries run from $600 to $3,000 per annum."

Canada's traveling salesmen will compare favorably with those of any country of the world, their experience being gained almost exclusively in wholesale warehouses or retail stores, this in many cases being backed up with a study of scientific salesmanship under the tuition of a training school or through contact with other salesmen at conventions of the traveling staffs of the large manufacturing and jobbing concerns. Meeting keen competition from representatives of British and American houses, the Canadian traveler is in a continuous training school in which he is kept alert and up-to-date of necessity if he is to retain or improve his position.

The training received by many traveling salesmen as clerks in retail stores is most valuable, those having some training as clerks as well as having spent considerable time in a warehouse having an advantage over those whose experience is limited to the warehouse only. Retail clerks, therefore, who are looking forward to some day going "on the road," should improve their present opportunities and thoroughly learn the selling as well as the stock end of the business they are engaged in. The traveler who can answer any question put to him regarding the origin, manufacture or sale of the goods he is selling is the one whose training has been most thorough.

CLOSER TRADE RELATIONS.

"Weaving Industrial Strands with Canada" is the subject of an interesting editorial in the Iron and Machinery World of Chicago. It speaks for itself and is quoted herewith, showing the pleasing attitude of one section of the technical press to our industries and national possibilities. Hardware and Metal was one of the first to advocate a strong cordiality of commercialism, as well as the encouragement of branch establishments of large American houses. Everywhere there are evidences of American industries opening branches and it is good to see the old-fashioned reciprocity cry dead and from its ashes arise a new creed which means help one another and grow. The World says:

"It is asserted that the production of steel rails at the two mills in Canada is now at the rate of more than 300,000 tons per annum. This is somewhat in excess of what the average annual consumption of rails in the Dominion has been in recent years. Nevertheless one of the Canadian trunk lines is reported to have just asked the Canadian Government to permit the importation of 50,000 tons of American steel rails, free of the recently imposed heavy discriminative duty. It is argued that the duty was not imposed for revenue producing purposes but to protect Canadian steel mills from foreign competition. The Canadian rail mills now have orders on their books for more rails than they can roll in twelve months. Consequently the relief prayed for inflicts no hardship upon the Canadian rail plants. There are many ambitious railroad projects in Canada at present, including several transcontinental propositions, and hence the consumption of steel rails is far above the normal and far above the ability of Canadian mills to roll. The continuance of the duty imposes a heavier burden upon construction and to that extent discourages construction work and accordingly retards the development of the country.

"Whether or not the relief asked for will be granted there seems to be growing up between the United States and Canada a more cordial commercial spirit. There is no gainsaying the fact that the destinies of the two countries are becoming more closely interwoven and that the gradual elimination of barriers seems to be the new tendency towards which events are shaping themselves. The existence of these commercial barriers between the two countries during the past few years has resulted in the acquisition by Canada of many American branch industrial establishments and to that great extent it has profited by the higher tariff duties. But the very acquisition of these plants has served to better acquaint the two peoples with each other, to soften past asperities and to give common ground to their commercial horizons. The end of the industrial coalescence with Canada has not been reached, for there are still other American enterprises aiming at territorial adaptation across the border, which will undoubtedly be realized and which will still further strengthen the commercial strands that are binding two great territorial divisions of North America into one."

FREIGHT PREFERENCE AGAINST BRITAIN.

At a meeting of the Association of Chambers of Commerce of the United Kingdom, held in London in March, a resolution was passed calling upon the president of the Board of Trade to take steps to secure for British shippers equality of treatment in the matter of freight rates at the hands of the American shipping combine. The complaint aimed particularly at freights to South Africa, Australia and New Zealand.

In justification of the move, Mr. Goodman, Birmingham, stated that the White Star line, with British management but in the American trust, gave a rate of 15s. to 20s. a ton on merchandise from New York to Sydney with transhipment at Liverpool, and charged British goods by the same steamer from Liverpool to Sydney 30s. to 42s. 6d a ton. The difference, it was asserted, created a material preference in favor of American goods.

FOR THE MERCHANT.

Give your employes only pre-digested knowledge.

Keep the key of your store yourself.

Buy your own goods and see that the quality and quantity is what you paid for.

Keep a young lady to do your detail work and let you know every day what has been transacted in cash, credit, total sales and purchases.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Shot—Five per cent. discount.

Antimony has advanced to 22½c.

Shellac Varnish—An advance of 10 to 15c.

Building Paper—Advances maintained.

Ingot Tin—Never so high, tendency to still higher prices.

Turpentine—Decline maintained.

Zinc—An advance in price, but discounts remain unchanged.

Cement—Market is easier.

TORONTO.

Shot—Prices have declined and we now quote 5 per cent. discount.

Linseed Oil—We quote an advance of one cent.

American Petroleum has advanced three cents. No change on local markets.

Ingot Tin—The record price of 41c. is now quoted.

Antimony—Price is now 22c. per pound.

Galvanized Sheets—Several brands are advanced slightly.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 20, 1906.

Every branch of trade is alive. Navigation opening has stirred all the country dealers to order largely. Spring goods are selling briskly. This means, of course, freezers, lawn mowers, building hardware of all descriptions, and kitchen utensils. Country house accessories are also selling freely and whole equipments for Summer houses will be in demand immediately. Practically no change is to be recorded, with one exception, namely shot, where the drop means a discount of five per cent. B and A emery cloth and sand paper has advanced but the discounts remain the same. Building paper is still slightly weaker in tone and the prices quoted still hold.

Cutlery and plated ware is in better demand and trade is increasing all round.

AXES—Our prices are as follows: $7.60 to $9.50 per doz.; double bitt axes $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—We are quoting: $4.25 for cold blast.

RIVETS AND BURRS—Steady business continually increasing is the report. Quotations as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—No great trade is expected in this line until June and July. Business is still active, though, and sales are seasonable. We quote as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS—The recent advance has been well maintained, and we are still quoting the following discounts: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS — Satisfactory trade is reported. Demand fine and no change in prices. We are quoting as follows: ⅜ and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSENAILS — Good demand. All grades selling well. Prices are still held as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Demand is only fair. Steadiness marks the trade generally. We quote $2.15 per keg f.o.b., Montreal.

CUT NAILS—Good trade. Plenty of demand, no feature noticeable. Price unchanged at $2.20 f.o.b., Montreal.

HORSESHOES—Large orders are the prevailing reports with market steady. Our quotations are as follows: P.B. new pattern, base price, $3.50 per 100 pounds; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Quite an active increase has set in. Ammunition and fishing tackle steadily developing and all lines are selling freely.

BUILDING PAPER—Business is still improving and it is likely that each week will see steady increases in sales. Carpet felt is $55 per ton. Dry sheathing is now quoted at 35c., while tar sheathing is 45c.

CEMENT AND FIRE BRICK —Great demand is setting in for cement. Never before has the trade shown such activity in cement. Higher prices may be expected, but the reported shortage in the American cement will be dissipated by the imports of abundant Old Country stock. These supplies will be at hand when the ocean liners now plying the Atlantic reach Montreal and Quebec. Now that the possibility of a coal strike in United States is minimized little fears are entertained of a shortage. Fire brick is in good demand. We quote: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We quote the following: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—This continues to be one of the active lines of the present market. Our prices remain as follows: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Orders continue to be very numerous and extend over a large territory. The price remains $1.45 per hundred sq. ft.

BINDER TWINE—Conditions are unchanged, and we are still unable to give prices.

RAW FURS—Prices to dealers are as follows:

		No. 1.	No. 2.	No. 3.	No. 4.
Bear	Black	$12 00	$8 00	$4 00	$1 00

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, April 20, 1906.

There have been no features in the trade during the past week in the way of price changing, etc., with the exception of shot, which is now subject to a 5 per cent. discount off list prices. As one dealer has put it, we are too busy to make any price changes.

Cement continues firm and in active demand. When the season opened stocks were low and this is being felt now in filling orders. Whether any change in price will be made depends upon how the season's demand keeps up. There are at least no indications of any lowering.

The complete opening of navigation

has been felt in a further increase in business, all the inland waters being now navigable and free from ice.

AXES AND HANDLES—Orders are being booked now for future delivery, although present business is quiet.

CUTLERY AND SILVERWARE—These lines are showing an increased activity both in present business and in booked orders.

SPORTING GOODS—A 5 per cent. discount has been allowed on shot, and general lines are selling well.

WASHING MACHINES— Trade is fairly active at present.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING — A large amount is going out. No change in prices.

GALVANIZED WIRE— We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—An active demand is experienced. Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The usual large volume of business is being done. Prices are being cut some.

CUT NAILS—This line also shows greater sales.

HORSENAILS — Business continues good with prices unchanged.

HORSE SHOES—The Spring has ushered in a good trade. Market firm. We still quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—The usual amount of business is being done.

RIVETS AND BURRS—Prices remain the same with an active business.

SCREWS—Business in screws continues good and a large amount is going forward.

BOLTS AND NUTS—Prices are firm, business good.

CORDAGE—We now quote as follows: On binder twine, 500 feet, 10c. lb:; 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13 1-4c. lb. Golden Crown, 500 feet, 9 3-4c. lb. On Gold Medal Brand (imported), 600 feet, 12 1-4c.; 650 feet, 13 1-4c. Discount for car lots: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-plv, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

CEMENT—The price of cement remains the same and a good demand is felt. Stocks have been low and are now pretty well drawn upon. If the demand continues to increase manufacturers say the tendency will be toward firmer prices. We are quoting as follows: For carload orders, f.o.b., Toronto, Canadian Portland, $2.00. For smaller orders ex. warehouse, Canadian Portland, $2.15 upwards.

FIREBRICK—There are no changes to record, but prices are very firm. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

BUILDING PAPER—There are no further price changes. The demand shows a steady increase.

HIDES — The supply continues abnormally light, partly due to the excessively bad roads which, combined with a hope for still better prices, keeps the country butchers from marketing their stock. There may be a further slight upward movement, but large buyers think the limit has been reached. For days Chicago holders and tanners have been ¼c. apart, and nothing doing, but the feeling is that that can't last, and that the holders will give way.

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 20, 1906.

Antimony is the feature this week. In fact never in the history of the oldest dealers has anything like the price of antimony been recorded. There is an actual shortage. The market is devoid of any undercurrent of a "corner," and is seriously settled down to its fate, which means that there will not be any amount of antimony available in this market until July that is Cookson's. The price is now 22½ cents and in London, Eng., antimony is selling at £95 per ton. It was only a short time ago that it was £27. It is now thought that the price will reach £100. Of course the chief trades affected by this advance are those in which this metal is used for hardening purposes, and it is hoped that it will not be a severe setback. Ingot tin is still mounting into the impossible prices and demand is good. Copper is firm with an upward tendency. Pig lead has fluctuated a good deal this week, but arrived back at normal prices again. Zinc is firm and the probabilities are that an advance may take place any time.

CANADA PLATES — Trade is fine. The advances made by some merchants have not been generally recognized. We are still quoting as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

COPPER—Still firm is the cry, with upward tone. The supply is scarce, and higher prices are expected soon. We still quote:, Ingot copper, 20½c. to 21c.; sheet copper, base size, 25c.

INGOT TIN—"Higher than it has ever been" is what one prominent dealer said, and certainly there seems no stop to the advances. The prices we quote are for medium sized orders, but for quantities jobbers are dealing with inquiries on their merits. Our price now is from 42c. to 12½c.

PIG LEAD—Again the market fluctuated. No change is recorded, though. We are still able to give prices as $4.40 to $4.50 per hundred pounds.

PIG IRON—Quotations are still for orders from stock. Inquiries are fair. We quote:

'Dom.," No. 1.	$19.50 to $20.00	delivered	Montreal.
Usual difference in price for ower grades			
Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	24.00	"	"
" (special)	23.00	"	"
" No. 3 (soft)	22 75	"	"
Summerlee No. 1	25.00	"	"
Clarence No. 1	20.00	"	"
" No. 3	19.50	"	"

BOILER TUBES—Our prices: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL,— We are still quoting as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Our prices are as follows: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $1.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Ruling prices are as follows: Queen's Head, 28 gauge, $4.35; 26 gauge, $4.10; 22 to 24 gauge $3.85; 16 to 20 gauge, $3.60; Apollo, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Comet, 28 gauge, $4.15 to $4.45; 26 gauge, $3.90; 22 and 24

gauge, $3.60 ; 16 to 20 gauge, $3.45 ; Bell brand, 28 gauge, $4.30 to $4.35 ; Fleur-de-Lis, 28 gauge, $4.20 ; 26 gauge, $3.95 ; 22 and 24 gauge, $3.70 ; 16 to 20 gauge, $3.65 ; 22 to 24 gauge, $3.70 ; 16 to 20 gauge, $3.45 ; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45 ; "Windmill Best," 28 gauge, $4.15 ; Sword and Torch, 28 gauge, $4.15 ; in less than case lots, 25c. extra.

BLACK SHEETS—Our prices remain as follows : 28 gauge, $2.40 ; 26 gauge, $2.35 ; 22-24 gauge, $2.30 ; 19-20 gauge, $2.30 ; 8-10 gauge, $2.45.

ANTIMONY—None till July is the report current. We quote 22 and 22½ cents.

TIN PLATES—Some noticeable advances made by dealers last week have been maintained, but the trade generally while active is unchanged. The following prices are still obtainable : Cokes, base size, 1C 14 x 20, $4 ; charcoal base size, 1C 14 x 20, $4.25.

TERNE PLATES—Dealers are again quoting quite generally $6.85.

INGOT ZINC—The market is quiet. Very little is being sold, and prices remain 6¾c. to 7c.

SHEET ZINC—We still quote : $7.50 in casks, $7.75 in less than casks.

SHEET LEAD—Our prices : 2½ lbs., 5½c. by the roll ; 3 lbs. and heavier, 5½c. by the roll ; small quantities 25c. per hundred lbs. extra.

BAR IRON—Local jobbers are still quoting $2.05 f.o.b. Montreal.

OLD MATERIAL — Our quotations are as follows : Copper wire, 15c. ; light copper, 14c. ; heavy red brass, 13½c. ; yellow brass, 10c. ; light brass, 7½c. ; lead, 3¼c. ; zinc, 4c. ; machinery cast scrap, $13.50 ; wrought scrap, $12 ; stove plate scrap, $11 ; mixed rags, 90c. to $1 per 100 lbs. ; old rubbers, 7½c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto April 20, 1906.

Ingot tin and antimony continue to occupy the centre of the stage, both being still on the upward move. Antimony is up another cent and jobbers who have small stocks are not intending to offer any as a sacrifice. Tin is making history and there does not seem to be any reason to look for any immediate weakness. The prices this year are apt to be remembered for some time, even though more plentiful stocks allow prices to ease off some.

Many dealers who have been holding off from placing orders owing to the high prices ruling are being forced to buy more liberally and the trade generally appears to be getting more used to high prices.

Bar iron is steady at $2.15 and galvanized sheets are higher on some lines. Lead has fluctuated some, but the prices remain about the same. Copper and brass are strong.

PIG IRON—Demand continues active with prices firm.

Middlesboro, f.o.b., Toronto	$21 50
Hamilton, No. 1, at furnace	21 00
" No. 2, "	20 50
Midland, No 1, "	21 00
" No. 2, "	20 50
Radnor, at furnace	30 00
Londonderry, f.o.b. Toronto, No. 1	22 00
" " " No. 2	21 50

BAR IRON — The market is quite strong and the ruling quotation now is $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Records are being broken each week and dealers do not look for any immediate relaxation. For large lots we now quote 41c. per pound.

TIN PLATES—High prices for ingots make quotations for plates stiff. Demand is very active.

GALVANIZED SHEETS— Prices on some brands have been slightly advanced. A good demand exists.

BRASS—The market is firm and prices steady. Buying is fairly active.

BOILER PLATES AND TUBES—The demand is reported steady and we quote as follows: Plates per 100 lbs., $2.20; heads, per 100 lbs., $2.45; tubes, per 100 feet, 1 1-2 inch, $8.50; 2, $8.70; 2 1-2, $10.50; 3, $11.80; 3 1-2, $15.80; 4, $20.00. Terms, 2 per cent. off.

LEAD—Despite some fluctuations we still quote: Canadian pig lead at $4.40 and English pig at $4.65 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—The market continues active with prices steady. We still quote as follows: 7 1-4c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

COPPER— The tendency is upward and prices are held strongly. We still quote: Ingot copper, $20 per 100 lbs. and sheet copper, $25 per 100 lbs.

ANTIMONY—Small stocks are held by some jobbers, but they are holding them at ruling prices. Another advance has been made and we now quote 22c. per pound.

OLD MATERIAL—The demand is particularly good now in all lines. Prices all around are upwards of a cent higher than last April, and the amount coming in does not meet the quantity asked for. Dealers' buying prices continue as follows: Heavy copper and wire, 15 1-2c. per lb.; light copper, 13 3-4c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $10 to $10.50, No. 2 wrought $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7 1-4c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Until the coal strike is over no settled prices can be quoted. We quote nominally:

Anthracite in cars at bridges, egg, stove and nut, $5.50; grate, $5.25; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; 3-4 inch, $1.40; run of mine, $1.30; nut, $1.25; N.P. and S., $1.00; slack, 75c.; box cars 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1 1-4 inch, $2.60; 3-4 inch, $2.50; mine run, $2.40; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, April 18, 1906

PIG IRON—Cleveland warrants are quoted at 48s. 3d. and Glasgow standard warrants at 48s. 2d., making prices as compared with last week 5d. higher for Cleveland warrants and 4d. higher for standard warrants.

TIN—Spot tin opened easy at £176 15s., futures at £173 15s., and after sales of 200 tons of spot and 200 tons of futures closed firm at £177 5s. for spot, £174 for futures, making price compared with last week £1 5s. higher on spot and £2 12s. 6d. higher on futures.

COPPER—Spot copper opened quiet at £85, futures £82, and after sales of 25 tons of spot and 50 tons of futures, closed quiet at £85 for spot and £82 for futures, making price as compared with last week 3s. higher on spot and 10s. higher on futures.

SPELTER—The market closed at £25 15s., making price as compared with last week 5s. higher.

LEAD—The market closed at £15 18s. 9d., making price as compared with last week 3s. 9d. higher.

UNITED STATES METAL MARKETS.

Advance proofs furnished HARDWARE AND METAL by The Iron Trade Review, Cleveland, April 19, 1906.

Considerable improvement was manifested in the pig iron market during the past week. Following the more active buying movement which started shortly after April 1, consumers have entered the market in increasing number and sales of good tonnages are fairly numerous. While inquiries are reported as much more plentiful, orders are noticeably larger and in many instances deliveries are specified well into the third quarter. Buying is general and apparently is to continue so. One large Chicago interest, after a very careful investigation, figures that 70 per cent. of the western trade has its requirements covered only until July 1, and that 20 per cent. will need more iron before that time.

The only marked exception to the improved situation is the quotation by two large producers of No. 2 foundry at $16.50 valley, though other interests are firm at $17. This is explained by the fact that certain furnaces have shifted from Bessemer to foundry, owing to inability to secure the former ore.

Ore navigation on the lakes has been formally opened. The upward rush is in full swing and the first of the ore-laden freighters have reached lower lake ports, though the ice is not yet entirely out of the Soo and Lake Superior. Preparations have been made for record shipments, and docks are being rapidly cleared of remaining Winter stocks. Heavy tonnages have been moved all-rail from mines to Michigan and other northern furnaces for some time. Ore sales of the past week include one of 65,000 tons non-Bessemer, a few of 25,000 tons and some scattered lots. Bessemer ore is unobtainable and the remaining tonnage of other grades is small so that some uncovered furnaces may experience difficulty in filling their wants ; already some shifting has been required.

The coal strike has begun to make itself felt by furnace interests. Four or five anthracite furnaces in the Lehigh and Schuylkill districts have been closed and two or three stocks in Central Pennsylvania using bituminous fuel have been banked. Furnace coke is slightly stronger though some buyers are asking producers to divert shipments.

Specifications on contracts for wire products are of such volume as to be a feature of the market. The demand is especially strong in the northwest, where jobbers allowed their stocks to run low, pending the opening of navigation. The consumption promises to break all records.

An improved tone prevails in scrap, especially in heavy melting stock in which Chicago reports sales of 10,000 tons and a 50 cent advance. Western railroads sold 15,000 tons during the past week. Iron mills, however, are still buying sparingly and in some lines prices are lower.

U. S. IRON AND STEEL MARKETS.

From the Iron Age, April 19, 1906.

Reports from the leading interest indicate that there has been a more general resumption of buying, the orders booked during the past two weeks having increased considerably, and extending practically over the whole field. Prior to that time, for upward of a month new orders did not equal current deliveries. In fact, there is again some uneasiness now over the possibility of an unmanageable amount of business.

The congestion of the rail mills is growing more serious and is likely to have its effect upon the general steel market and indirectly upon the output of the rolling mills. On May 1, the Ohio mill of the Carnegie Steel Co. will be turned on rails for an indefinite period, thus cutting down the supply of tin plate and sheet bars. Even now, in order to fairly meet the requirements of the independent mills who are supplied with tin plate bars, the United States Steel Corporation has ordered the shutting down of some of its own tin plate works.

In the Chicago district the market is firmer. There have been some fair sales of foundry and malleable Bessemer pig and large contracts of the latter are looked forward to because the western implement makers are now figuring on their season's requirements for malleable castings.

In the east, New England reports a continuance of the competition between the Buffalo and other districts. The buying of foundry pig by the cast iron pipe makers, which was quite liberal, seems to have been concluded. Much of the iron was placed at slight concessions.

The Eastern Pennsylvania steel makers have bought additional tonnage, but the price has remained stationary at $17.90 to $18.00 delivered, with an occasional offering at a lower price.

The prospects of an Anthracite coal strike is having little effect upon the market. It is known that some makers will seize the opportunity to blow out furnaces which were in need of repairs anyhow, and that at least one stack, ready to blow in, will remain idle.

The structural trade is quieter, notably so far as new buildings are concerned. It is admitted that the strike is having some effect. Among the larger orders placed are 5,200 tons of bridge work for the New York & Long Branch Railroad, 4,000 tons for the Moodna Creek viaduct of the Erie Road, and 2,000 tons for the Utah Copper Co.

It is estimated that the contracts of the bar mills with the western implement makers aggregate from 175,000 to 200,000 tons. They were made on the basis of 1.40c., Pittsburg, with the implement makers exclusively, and that figure has since been withdrawn.

The inquiries from foreign markets are heavy and pressing, but the works are taking export orders very conservatively, confining themselves to holding their position in the world's markets.

Nova Scotia Trade News.

Halifax, N.S., April 18.

Business was rather on the dull side during Easter week, the principal sales being barbed and plain wire. There is some demand for paints and oils, and it is expected that it will increase still further as the season progresses. The weather has been a little backward, cold and wet, and not at all favorable to business. No special changes are noted in prices, all lines being fairly steady just at present.

* * *

The disabled North German Lloyd liner Koningen Luise has completed repairs at this port and sailed for the Mediterranean. The liner's rudder shaft was broken, and a new one was made at the Trenton, N.S., works of the Nova Scotia Steel & Coal Company. Considering the magnitude of the work the job was accomplished in record time. The new shaft was 13 inches in diameter—one inch more than the fractured one. It was 22 feet six inches long, and weighed when finished 14,500 pounds. When first cast and before it was planed the weight was over 12 tons. The order was given on March 19 and the steel company said they could finish it by April 14. As this was not quick enough Captain Max Moeller, superintendent of the North German Line, went to New Glasgow, with the result that the company put on three shifts and worked night and day. The planing of the big shaft went on continuously until it was reduced from twelve tons to a little more than seven. It took eighteen days to cast, forge and plane the shaft, and it was placed in position so that the liner got away on time. Captain Moeller expressed his satisfaction with the work, adding that he believed the shaft was better than the one put in when the ship was built, as the additional inch will give it added strength.

* * *

One of the most attractive window displays of the Easter season was that of A. M. Bell & Co., hardware dealers, on Granville street. It is by no means excessive praise to say that in his arrangement Mr. S. Wetmore, whose work in design and execution they are, has turned out a "work of art." The north window represents with perfect fidelity a farmhouse and mill, the wheel propelled by a stream of real water, which runs lightly over its pebbly bed. There are the stables, barn and usual outbuildings, while teams partly laden with hay stand about. In the foreground is the ferry, with boats all ready to take you across the tiny river. This flourishing property on all its fences and the walls of its outbuildings set forth the excellence of "Cypher's" incubator, and in the south window, walking about in comfortable environment of a big brooder, are 82 little chickens, to whom the brooder serves the place of the wings of the mother hen, and who through the medium of Cypher's incubator were hatched out recently. Eighty chickens out of a total of 100 eggs is a fairly satisfactory result. Both windows were magnets for thousands during the latter part of the week.

* * *

Stanley E. Elkin, of St. John, N.B., and Miss Ethel W. Fanjoy, daughter of Mr. W. F. Fanjoy, of Sydney, were married in the New Falmouth Street Presbyterian Church, Sydney, last Wednesday. Mr. Elkin is secretary and treasurer of the Maritime Nail Works, of St. John, and the bride is one of Sydney's most popular young ladies.

* * *

Stellarton again deplores the loss of a most respected citizen, Mr. Daniel Fraser, hardware merchant, who died on Friday morning at his home on Mackay street. He had been ill for some time, and was a very great sufferer.

CLEANSING REFRIGERATORS A NECESSITY.

Some very useful and instructive information regarding the treatment of refrigerators in the Spring and Summer has been given out by Prof. Ruddick, the Canadian dairy commissioner, and should prove instructive not alone to dairymen, but to all users of refrigerators throughout the Dominion. He says:

"Every Spring, before a refrigerator is used, it is well to go over the whole interior with some kind of disinfectant to destroy the germs and spores of mould that may be there. Last Spring I asked Dr. Connell's advice regarding the disinfection of refrigerators, and he suggested bi-chloride of mercury (corrosive sublimate). This should be used in the proportion of 1 part to 1,000 parts of water. It is a very deadly poison as everybody knows. The solution is safe to use, so far as touching the hands is concerned. We washed the whole interior with that solution, and found it evry effective. I believe that a solution of that kind, or a solution, of formalin used in the refrigerators in the Spring, before they are used, would be helpful in keeping them pure and sweet during the Summer months. We will get more exact information on this point from the scientific men later on. The point I make is that we should have these places thoroughly disinfected every Spring, and oftener, if necessary."

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a m. Friday, April 19, 1906.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

Abbreviated Market Notes for Current Week.

Auger Bits—New lists on Irwin auger bits.

Wringers—Advanced $3.00 per dozen.

Paper—Decline 1-2 cent per lb. in Eddy's paper.

Stove Pipe—Decline.

With the opening of navigation there is a big rush of heavy goods from the east and some delayed orders are now being filled. Spring trade is very active and the volume of business is much larger than last year. Prices are steady in most lines.

GAME TRAPS—Discounts are now as follows:

H. & N., discount	50 and 5 p.c.
Victor, "	65 and 10 p.c.
Newhouse, "	35 p.c.
Bear	$7 each

SCREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows:

Cold blast lanterns	$5 25	per doz.
Coppered cold blast lanterns	7 25	"
Cold blast dash "	7 75	"
Lift Lanterns	4 25	"

BLUESTONE—Selling well at $6.25 to $6.50 per cwt.

WIRE—Prices are steady. We quote:

Barbed wire, 100 lb					$2 90
Plain galvanized, 6 to 8	$3 39	9	$2 50	2 90
" " 10	3 50	12		3 10
" " 13	3 20	14		3 90
" " 15	4 45	16		4 60
Plain twist					3 00
Staples					3 50
Oiled annealed wire, 10	$2 96	11		$3 02
" " 12	3 10	13		3 20
" " 14	3 30	15		3 45

Annealed wires (unoiled) 10c. less.

HORSESHOES—Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

HORSENAILS—Revised list and discounts are now as follows:

	per lb.		per lb.
No. 10	$0 20	No. 6	$0 28
" 9	0 22	" 5	0 32
" 8	0 24	" 4	0 40
" 7	0 26		

Discounts are quoted as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅜ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

SCREWS—Discounts are as follows:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

NUTS AND BOLTS—Discounts are unchanged and continue as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

RIVETS—Quoted now as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	34⅓
" No. 12	40

COIL CHAIN—Unchanged in price. We quote:

Coil chain—

3-16 inch	$3 25	¼ inch	$7 20
5-16 inch	5 20	⅜ inch	4 60
7-16 inch	4 45	½ inch	4 30
⅝ inch	4 10	¾ inch	4 00

SHOVELS—Discounts on spades and shovels continue 40 and 5 per cent.

HARVEST TOOLS—Discounts are now 60 and 5 per cent.

AXE HANDLES—Quoted as follows:

Axe handles, turned, s.g.hickory, doz			$3 15
No. 1	1 90	No. 2	1 60
Octagon extra	2 30	No. 1	1 60

AXES—Prices quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " "	25 p.c.
Royal Oak, per doz	$6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz	9.00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

BUTTS—The discount on wrought iron butts is 70 per cent.

CHURNS—The discounts from list prices are 45 and 5 per cent.

CHISELS—Quoted at 70 per cent. off list prices.

AUGER BITS—The list on "Irwin" auger bits has been changed and it is now the same as the list on common auger bits. There has been no change in the discount. Discount, 70 per cent.

BLOCKS—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

FITTINGS—Discounts continue as follows:

Wrought couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	55 p.c.

GRINDSTONES—The price is now 1 3-4c. per lb.

FORK HANDLES—The discount is 40 per cent. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 per cent. off list prices.

HOOKS—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " per doz	1.70

STOVE PIPES—The price has declined and quotations are now as follows:

6-inch, per 100 feet length	8 50
7-inch, " "	9 25

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 per cent.

WASHERS—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

WRINGERS—Prices have been advanced $3.00 per dozen and quotations now are:

Royal Canadian, per doz	$33.00
R. B., per doz	37.75

FILES—Discounts are quoted as follows:

" Arcade "	75 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

BUILDING PAPER—Prices are as follows:

Plain.		Tarred.	
Joliette	40c.	Joliette	65c.
Cyclone	55c.	Cyclone	80c.
Anchor	55c.	Anchor	65c.
Pure fibre	60c.	Pure fibre	80c.

TINWARE, ETC.—Quoted as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, Famous	50 p.c.
" Imperial	50 and 10 p.c.
" " (one coat)	60 p.c.
" Premier	50 p.c.
" Colonial	50 and 10 p.c.
" Royal	60 p.c.
" Victoria	45 p.c.
" White	45 p.c.
" Diamond	50 p.c.
" Granite	60 p.c.

PLANISHED COPPER—Price is now 33c. per lb.

CORDAGE—Quotations are as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25
Cotton rope, per lb	00 21

SOLDER—Quotations now at 24c. per lb. with concessions for large quantities.

VISES—Prices are quoted as follows:

" Peter Wright," 30 to 34	14½c. per lb.
" " 35 to 39	14c. "
" " 40 and larger	13½c. "

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNTION, ETC.—We quote:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	20 p.c.
" military	20 p.c.

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

MUNRO WIRE WORKS, Limited
NEW GLASGOW, N.S., AND WINNIPEG, MAN.

PAINT SPECIALTIES

Are money makers and should not be overlooked when stocking up. We carry a large assortment in neat and attractive tins.

SAMPLES AND PRICES ON APPLICATION

90 to 100 "	

British Columbia Trade News

Vancouver, B.C., April 14, 1906.

Half a million tons of ore, or nearly that amount raised, shipped and treated in B. C. smelters and refineries and reduction works, from B. C. mines is the record of 76 B.C. mines for the first three months of 1906. Of the 76 shipping mines only 17 shipped in the last week of March, so that the record is even more remarkable. In the treatment of this enormous quantity of ore there are eight smelters engaged. Of these, the largest is the Granby at Grand Forks with eight furnaces. The total capacity of these plants when the Dominion Copper Co's smelter is enlarged, as it will be immediately, and the zinc smelter at Frank is completed, will be between 50,000 and 60,000 tons weekly. With the record for the first three months of the year set so high, and the first part of the year not the most favorable for mining operations, it is a matter of interest to figure what the total for the year will be. The whole Kootenay mining country is steadily progressing and each month sees some improvement, either increase of output or addition to plant for treating ore.

* * *

The Consolidated Cariboo Mining Co., which has operated very large hydraulic propositions at Bullion, Cariboo, is to greatly enlarge its facilities for hydraulic work. J. B. Hobson, the general manager has just returned from New York, where he has succeeded in interesting the Guggenheims, leading financial men of the financial metropolis. Half a million dollars is to be spent in putting in a canal and pipe lines, which will be capable of delivering 5,000 miner's inches of water. It will take all this season to build the canal which will be 21 feet wide and six feet deep.

* * *

A miner's inch of water, while variously measured in different parts of the country, is legally defined in British Columbia as a flow of 1.68 cubic feet of water per minute. In former times it was the custom to place a weir across a stream and with a slotted board set up across the weir, the outflow through a slot a certain depth and width was figured as the miner's inch. In this country, where water is all-important in mining, irrigation, and for power, the measurement by miners' inches is important, as in that way the legal granting of a water record is made.

* * *

Nearly all the shingle mills at Ballard, a suburb of Seattle, Wash., has struck on wage complaints. Billard is the largest shingle producing town even on his coast where all the largest aggregations, except Barnum's, have their habitat. The fact that there is an unprecedented demand for shingles at this time, that there is no surplus in the market on either side of the line and that all mills have been working full time, would make it appear that if the trouble is not soon settled there will be a shortage. The B.C. shingle mills always sell a large proportion of their output to eastern U. S. points, but at the present time the home market is more than claiming attention.

* * *

Lumber conditions continue very aggressive. There is no let-up to the enormous demand from east of the mountains. At the same time there is not a very appreciable increase in the log supply yet. The mills are in nearly every instance, with the exception of the of the Hastings sawmill in this port, working only a day crew, because they cannot get logs enough for day and night. They could sell the lumber all right, but cannot get the logs fast enough to warrant starting in a night crew. As predicted, the enormous expansion of the lumber trade is having the effect of attracting new capital into new establishments here. There is to be at least one more large mill on Burrard Inlet this year, work having been begun on construction. A sale of property on the Fraser River was recently made for another mill, and now it is reported that prominent Seattle lumbermen are negotiating for a site here.

* * *

The only industrial strike (aside from the telephone operators) which threatened Vancouver this season, that of the carpenters has been averted by a mutual agreement between masters and men. The men wanted an eight-hour day with the minimum wage at 45 cents per hour, recognition of their unions and permission for business agents to visit all buildings in course of construction. The masters met the min every point except that of the wage demanded. On that they compromised at $3.50 per day of eight hours, the former minimum being 40 cents per hour for an 8-hour day. As a matter of fact many men have been in receipt of 45 cents per hour and even more, when found capable. This may have led to the movement to secure that figure as the minimum. As there are no other strikes in sight, Vancouver looks to another season of peaceful progress.

* * *

Kaien Island, the much-exploited and much-advertised, and supposed terminus of the Grand Trunk Pacific on this coast, is the site chosen for the location of a mill by the B. C. Pine Timber Co., an organization recently formed here, and which has as a starter an order to cut 500,000 ties for th new transcontinental line. W. D. Hays, a brother of the general manager of the G. T. P., associated with a number of local men, is interested in the mill. The machinery for the mill has been ordered from the east and will be forwarded to Kaien Island as quicly as it arrives, for the contract for ties is for early delivery and it is anticipated that work on cutting them will begin by mid-summer.

* * *

Seattle capitalists are the latest to project a plan for a pulp mill up the coast. It is to be located at Bella Coola. At the present time a survey party of 25 men is going over the proposed limits of the company completing the survey. A lease of lands has been secured by the company, which is known as the Bella Coola Development Co. While Seattle men represent the capital, the bulk of it comes from the eastern States.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Changing From Credit to Cash.

A correspondent signing himself "Wanderer" writes: "I noticed in your 'Letter Box,' issue March 24, an inquiry from H. H. Clark, Lennoxville, in re changing from credit to cash business. A good many stores in this country have done or are doing that; giving as a reason that as the farmer gets cash for anything he raises it is high time he paid cash for what he buys. All the merchant needs is backbone, coupled with a little diplomacy that will enable him to explain matters to his customer and do it in such a way that he will leave the customer with the impression that he is doing him a favor by refusing him credit. I have in my mind now a country store that changed from credit to cash some years ago and it was predicted that it would not be a success, as there were three credit stores in the same town. But it has, largely due to the fact that the merchant made a complete change and bought and sold everything for cash. I stood in his store one day when a customer came in and the following conversation took place:

"'Good morning, John; how are you this morning?'

"'Very well, thank you, Donald. Are you buying partridge?'

"'Yes, John.'

"'How much?'

"'Twenty-five to thirty-five cents a brace as to quality.'

"'Buying butter?'

"'Yes, 18 to 20 cents per lb.'

"'Do you buy yarn mittens?'

"'Yes, 20 to 30 cents pair.'

"'Well, I will bring in the stuff and see if we can trade.'

"'All right, John.'

"The produce was brought in and a price agreed upon. The merchant went to his till and paid cash for all of it. After doing this he said:

"'Now, John, what can I sell you today?'

"'I don't know yet. I have a bill to pay down street and will see what money I have left.'

"'All right, John, but if you want any goods my prices are right.'

"The man went out, but came back in about an hour and spent even more than what the merchant had paid him.

"I asked the merchant if he did all his business that way. He said yes, and that by paying cash to the farmer there was no excuse for him to ask credit when he wanted to buy. Of course a man cannot sit round and smoke and play checkers and expect to do a cash trade. He must be awake, keep posted on prices and find a market for what he buys in the way of produce. If he takes pains to study the wants of his customers there is nothing to hinder him doing a profitable cash trade."

* * *

Steel Row Boats

R. G. Flewwelling, Hampton, N.B., writes: "Can you tell me of any manufacturers of steel row boats in Canada?"

Note.—No one in the boat building trade in Toronto knows of any being manufactured in Canada.—Editor.

* * *

Self-Wringing Mops.

A. M. Bell & Co., Halifax, N.S., write asking: "Can you inform us where we can buy self-wringing mops not attached to pails?"

Note.—Tarbox Bros., 11 Adelaide street east, Toronto, manufacture several lines and supply the jobbers. —Editor.

* * *

Book on Trade Discounts.

C. R. Everett, of the Victoria Copper Mining Company, Victoria, Mich., writes: "In answer to a query of mine as to where I could obtain a book giving the equivalents or net prices on trade discounts I have been referred to you. Kindly advise me what combinations of discounts are covered by your tables and the price of same, etc."

Note.—Morton, Phillips & Company, Montreal, publish a work of this kind, but we do not.—Editor.

* * *

Bottle Washers for Milk Dairy.

Mackie & Ryan, Pembroke, write: "Can you advise us where we can procure a bottle washer for a milk dairy?"

Note.—The Whitton-Drummond Company, King street east, Toronto, the Ballantyne Dairy Supply Company, Stratford, the Lawrence Dairy Supply Company, Ottawa, and the Derbyshire Dairy Supply Company, Brockville, are a few concerns in Ontario handling these goods.—Editor.

When wholesale prices are to be made, follow your own judgment.

See that your customers get what they buy at the price and time agreed on.

rain water

"Metallic" Eavetrough and Conductor Pipe are made of firmer metal, are better galvanized and more ornamental than those of other makes. There are no flaws or weak spots in "Metallic" Eavetroughing, caused by faulty rolling or bending.

Eavetroughs of any kind demand the utmost possible strength and in this respect "Metallic" Eavetroughs are superior to anything made. Corners are provided for by accurate mitres.

When once put on they never sag or twist.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.

LEATHER PUMP PLUNGERS.

Joseph Barrett & Sons, of Petrolia, who have been for eighteen years manufacturers of valve cups or plunger leathers for the oil trade, have recently commenced the manufacture of these goods for the general trade and have been very successful. Good reports have come in from those who are using them and have found them to be a superior class of goods.

SUIT FOR A BONUS.

Suit has been entered by Bennett & Wright, Toronto, against the W. J. Gage Co., wholesale stationers, for the recovery of $9,613.12, they having contracted for considerable work on the premises of the Gage Co., the contracts amounting to upwards of $20,000. After the recent investigation Mr. Gage is stated to have refused to pay about $4,000, advancing the claim that he had been over-charged to that extent. Bennett & Wright state that they are suing simply for their legitimate profit on the contract and that the contention that a 25 per cent. bonus was included is incorrect. The figures placed before the executive of the Master Plumbers' Association were the actual cost prices, and the 25 per cent. added on was to cover their profit, with a percentage of 5 per cent., which went to the association. Mr. Gage says he wants to find out whether or not a bonus was paid.

Newmarket, Ont., is to have an extended sewage and water system this week, and C. A. McKane has opened a plumbing shop there with the intention of capturing the trade. Mr. McKane was formerly employed by several of the leading master plumbers in Toronto.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

433. Ash handles, etc.—A large and influential firm in Birmingham wishes to purchase any quantity of the following goods: Ash handles, D. handles, stems, hay and manure fork handles, shovel handles, broom handles in bass, maple, etc., wheelbarrows, washboards, warner wheels, spokes, hubs, hay and manure rakes, cheap furniture, agricultural hand tools, hickory pick, sledge, hammer, axe and hatchet handles. Also shunting poles.

436. Hammer handles.—A Birmingham firm is in a position to take large quantities of hammer handles.

438. Spade eye handles.—A Birmingham firm wishes to get in touch with a shipper of spade eve handles.

439. Hydraulic pumps.—A large firm in Reading wish to appoint an agent for the sale of their hydraulic pumps.

444. Brass handles, etc.—A Birmingham firm wishes to appoint an agent in Canada for the sale of brass handles, knockers, letter plates, builders' goods in brass and iron. Also cabinet fittings.

446. Scales.—A Birmingham firm wishes to appoint an agent in Canada for the sale of their scales.

450. Blow lamps.—A Birmingham firm wishes to place their blow lamps or burning-off torches in Canada.

451. Fire clay. — A London firm wishes to place on the Canadian market their fire clay.

458. Gun-metal steam cocks, etc.—A Yorkshire engineering firm, manufacturers of gun-metal steam cocks, and valves, injectors, steam and water gauges, baths, lavatories and closets, fire-clay sinks, electric fittings, lamps, bells and cables, desire to extend their business in Canada and invite correspondence from parties interested.

SPLENDID TRADE RETURNS.

The prosperity prevailing throughout Canada is well illustrated by the trade returns for the nine months ended 31st March. These figures reveal a total foreign trade of $396,859,305, or fifty-five and three-quarter millions more than for the same period of the previous fiscal year.

The imports for consumption amounted to $207,202,084, being a gain of nearly eighteen and one-half millions. Imports of dutiable goods showed an increase of almost sixteen millions, and free goods a betterment of over seven millions. The latter is an infallible indication of brisk manufacturing.

In regard to exports the showing is infinitely better. We shipped abroad domestic products to the amount of $176,394,495, an increase of thirty-one and a half million dollars.

The most significant gain in exports is that in agriculture, which totals nearly sixteen millions. The other increases are: Products of the mine, $2,608,440; fisheries, $4,117,016; forest, $3,245,644; animals and produce, $3,504,473; manufactures, $2,139,697.

FOUNDRY AND METAL INDUSTRIES

The Transcontinental Railway Commission will shortly call for tenders for 50,000 tons of 80-lb. rails, and 2,500 tons of angle irons.

The Belleville Rolling Mills have been sold to J. Wardrope, of Ottawa, who has been acting for a syndicate. New machinery will be installed.

It is reported that the Canadian Locomotive Construction Co. will establish a plant employing 1,500 men at Halifax.

The Lake Superior Corporation and the Dominion Iron & Steel Company, have announced that they will both tender for the contract for 50,000 tons of steel rails to be awarded by the National Transcontinental Commission. As the rails are for this year's delivery it was thought that the Canadian companies would not be able to take the order. It is probable that the contract will be divided between the Canadian companies, as with the tariff they can quote a lower figure than the English manufacturers, who are the closest competitors.

ENTERPRISE FOUNDRY ENLARGEMENTS.

The Enterprise Foundry at Sackville, N.B., in which Messrs. Emerson & Fisher, of St. John, N.B., are largely interested, is to be further enlarged. A short time ago it became necessary to enlarge the foundry and now increasing business has made an addition to the warehouse and the erection of a new office building necessary. It is expected that the new buildings will be ready for occupancy in July. The addition to the present warehouse will give the foundry a three-storey warehouse 160 x 40 feet. The new office building will be a two-storey structure 40 x 35 feet, fitted with a vault and all the latest conveniences.

Several new lines of stoves are now being manufactured at the foundry. Among the ranges is a large one, with double ovens, especially adapted for hotels, it being said to be the first of its kind made by a Maritime Province foundry.

BURNING SOFT COAL.

The present coal strike has once more led people to think of the feasibility of burning soft coal. Although the time of year is about past when we need artificial heating, yet a prolonged strike of the anthracite miners will certainly affect us by the time next Winter sets in. Soft coal can, however, be successfully burned if care is taken in the way it is placed on the fire. It is necessary to have a good fire already going before the soft coal is put on. The soft coal should then be placed on top of the other fire in the shape of a mound, care being taken that it does not extend to the edges. The result will be that the heat will drive off the volatile matter so characteristic of soft coal, and will ignite the surface of the mound with little or no smoke. After the volatile matter has gone, the coal becomes coke, and is then by being spread out over the surface of the grate ready to perform the same service when a new supply of coal is added. Three fires a day have been found sufficient in this way of burning coal.

FURNACES IN CHINA.

The James Smart Mfg. Co., of Brockville, is opening up quite a trade in furnaces with North China. The last order received was for two furnaces for Chin Chow, Manchuria. Reports from that place say these heaters are being well received and that they give every satisfaction. The temperature sometimes drops to 20 below zero during the Winter in Manchuria.

FOREIGN COMPETITION IN RAILS.

A certain amount of surprise was manifested a few months ago, when it became known that a Spanish company —the Altos Hornos de Viscaya, of Bilbao—had succeeded in securing two contracts for the supply of a total of 21,000 tons of rails for export, the price being lower than the offers submitted by the associated works. The arrival of a new competitor in International markets induced the International Rail Syndicate to offer the Spanish company an allotment in the syndicate, so as to obviate competition in the future, but it is uncertain whether the company has agreed to the proposal. At any rate, the company plainly intimated at the time that it could take care of itself in the home market in Spain, and that its adhesion to the syndicate would be possible on the basis of an allotment of 60,000 tons per annum. Apparently the question is still in a state of suspension, but in the meantime new rivals have risen to disturb the equanimity of the Rail Syndicate in the markets of the world by the appearance of Russian and Austrian rail rolling mills as successful competitors in Turkey. The Turkish authorities required 14,000 tons of rails for the Hedjas Railway, and the Rail Syndicate arranged that the order should be allotted to the German works, which tendered at £5 16s. 10d per ton as the lowest price with free delivery at Haiffa. It is, however, reported from Constantinople that this tender has been rejected, and that the order has been divided between a Russian works and an Austrian company. The Providence Russe has secured the supply of 8,000 tons at £5 8s. 10d. per ton, while the Austrian Alpine Mining Company is to furnish the remaining 6,000 tons at £5 10s. 5d. per ton, with free delivery at Haiffa in both instances. If this report should be confirmed, it will prove somewhat of a shock to the International Rail Syndicate. In the meantime, the rail pool has, we understand, another eighteen months to run, and a good deal of dissatisfaction exists regarding the present agreement.—Iron and Coal Trades Review.

PAINT, OIL AND BRUSH TRADES

AMERICANS AFTER CANADIAN GLASS TRADE.

U. S. Consul Martin, of Amherstburg, who wishes to stimulate the American interest in the glass trade of Canada, writes:

Although the United States lies contiguous to the Dominion of Canada, with excellent facilities for reaching its markets by rail and water routes, the American manufacturers of glass are not participating in this market to the extent they should. In some lines they seem to be getting their share of the trade, but in window glass, common, colored and plate, only a small percentage is imported from the United States. This can best be shown by the following tables giving the amount and value imported from principal countries for the fiscal year ending June 30, 1905:

Country.	Common window glass. Square ft.	Value.	Colored, stained, etc. Square ft.	Value.
Great Britain	9,131,081	$227,996	219,908	$25,936
Belgium	10,078 047	244 987	89,580	5,581
France	83 700	2,195	.....	.....
United States	678,227	18,158	233,047	13,153

Country.	Plate glass up to 25 square ft. Square ft.	Value.	Plate glass exceeding 25 square ft. Square ft.	Value.
Great Britain	324,870	$52,299	282,101	$57 469
Belgium	433 927	70,272	518,126	70,533
France	125 559	27,197	5,803	1,129
United States	17,184	4,495	4,112	247

The United States furnished less than 4 per cent. of the common window glass, about 4 per cent. of the plate glass not exceeding 7 square feet each, 2 per cent. of the sizes from 7 to 25 square feet, and less than two-tenths of 1 per cent. on the still larger sizes. In plain, colored, opaque, stained, or tinted, and muffled glass America supplied 30 per cent. of the values. The duties are 15 per cent. on common window, 20 on stained, etc., 10 on plain glass up to 7 square feet, 25 up to 25 square feet, and 35 per cent. on larger sizes. On plate glass, rough rolled, the duty is 30 per cent.; the imports were $21,214, of which about 25 per cent. came from the United States.

In the Canadian glass trade other than those named the United States makes a better showing. The total value of electric light bulb imports was $41,134. All but $89 of this amount came from across the border.

Glass carboys or demijohns, bottles, decanters, flasks, or vials were imported to the extent of $313,773, of which the United States furnished $102,697 worth (standing second in the list), Germany sending $109,060. The duty on this class of glass is 30 per cent., and Germany pays the surtax.

Glass jars and glass balls, and cut, pressed, or molded crystal or tableware, decorated or not, are dutiable at 30 per cent. The total imports were $329,090. The United States headed the list with $218,540 worth.

Lamp chimneys, glass shades or globes, and blown-glass tableware pay 30 per cent. duty. The United States again headed the list of countries by sending $79,877 worth out of a total of $113,862.

The Canadian reports divide manufactured glass into 17 classifications, and I have given 11 items, covering importations to the amount of $1,645,884, of which the United States furnished $482,962. The importations for the year ending June 30, 1905, amounted to $1,952,504, the United States furnishing of that amount $596,740, or a trifle over 30 per cent. of the total. The importations for the year previous were about the same amount, with practically the same percentage from the United States. The last half of 1905 shows increased impotations, with a falling off in percentage from the United States. Total imports for six months ending December 31, 1905, were $1,209,016, the United States furnishing of this amount $306,477, a trifle over 25 per cent.

Great Britain has the benefit of the preferential tariff, while Germany is handicapped by the surtax of 33 1-3 per cent. in addition to the regular tariff. All other countries are on the same footing, as far as tariff is concerned.

If the American manufacturers can meet the prices quoted by the European manufacturers they can get the trade, as no prejudice exists against American goods.

Never has there been a time in the history of Canada when high grade quality in the article you sell has been in such demand as at present. Hollywood Paints, Paste, Ready Mixed and and Floor are made to meet this demand ——and are meeting it.

PAINT AND OIL MARKETS

Decoration

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 20, 1906.

Turpentine's drop of last week has been maintained. The direct opposite has taken place in the case of shellac varnish, which is now very high, and pure orange is quoted at from $2.70 to $2.75, and No. 1 orange at $2.50 to $2.55. There is still a scarcity of gum shellac which is accounted for by the lack of supplies from India. It is only about two years ago that gum shellac was selling at 15c. a pound. This was remarked by a prominent member of the paint trade the other day. A series of what would be termed crop failures has caused the jump up in prices. Linseed oil is advancing and we quote this week 57 to 60c.

Business generally is good and the early opening of navigation promises to keep all the large manufacturers well employed. This is according to the usual expectations, only that this season more than ever before the mills will all be taxed to their utmost. Prices are firm with the advances quoted being worthy of especial note. These advances are likely to be maintained.

LINSEED OIL—We quote : Raw, 1 to 4 barrels, 55c. 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c. to 60c.

TURPENTINE — We quote : Single barrel, 95c. per gallon; two barrels or over, 94c.; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

GROUND WHITE LEAD — We give prices as follows : Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65 ; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC — We quote as follows : Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote : Pure, 8c. to 9c.; No. 1, 6½c. to 7½c. No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are : Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows : Casks, 7¼c.; 100-lb. kegs, 7½c; smaller quantities, 8½c.

RED LEAD—Prices are firmly held as follows : Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote : Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote : Pure white, $2.90 to $2.95: pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is firm at following prices : Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM—We quote as follows : American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—New prices have not yet been issued and meanwhile quotations can only be obtained from the dealers direct.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS — Trade is brisk. Some marked advances are expected. Opening of navigation will have a strong stimulating effect on trade. Meanwhile we are quoting the following : First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80 ; third do., $5.75 ; fourth do., $6.50 ; fifth do., $7.50 ; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24; and twelfth do., $28.50.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 20, 1906.

Linseed oil is again stronger this week and shows another cent advance. The increased use at this time of year, coupled with a lighter seed crop, are the reasons for this strength of the market.

Turpentine remains the same with the market a little easier than it has been.

An advance of three cents has been made in American crude petroleum, but Canadian prices have not been affected as yet.

Paris green and white lead are unchanged, the same scarcity prevailing in both cases.

Mixed paints continue to be a feature of the trade in so far as volume of business is concerned. All makers report business good in this line.

USE ARK BRAND

Sell your customers ARK BRAND PAINT because it has no superior.

We stand back of you with the guarantee.

ARK BRAND PAINT spreads easily and smoothly. It does not crack, chalk or peel.

Painters like ARK BRAND PAINT because it means "money saved" for them. It is made from pure lead, zinc and oil, and ground perfectly.

H. J. Cundall, of Charlottetown, P.E.I., asks for tenders for an addition to Prince of Wales College.

H. W. Pearson, secretary-treasurer of Temiskaming and Northern Ontario Railway Commission, asks for tenders for several roundhouses.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Builders' Hardware.

The Wilcox Manufacturing Company, of London, have a line of new door hangers, locks and other builders' hardware which it would be just as well to inquire about. Their new catalogue tells all about these things and will be mailed upon application.

Trucks.

Trucks are always a necessary article in all kinds of businesses. The Burrow, Stewart & Milne Company, of Hamilton, are cataloguing some pretty good trucks—for all purposes—and will be glad to tell the trade about them.

Retailer's Calendar.

The Innisfail Hardware Co., of Innisfail, Alta., have sent us their calendar. The cuts of their store—an interior and an exterior view—indicate that the business is a very progressive one.

A Page-Hersey Folder.

A unique folder in the form of a large shipping tag is being used by the Page-Hersey Iron & Tube Co., of Guelph. It calls particular attention to the P.-H. brand of quality on their pipe and invites dealers to send for their catalogue.

Morgan's Springs.

The catalogue of the Morgan Spring Co., who manufacture springs for nearly every purpose, as well as a full line of staples and specialties made from wire, is one of the most complete of its kind. Everything in these lines that the hardwareman or manufacturer needs is shown in this booklet, which will be furnished on application to James A. Henderson, Board of Trade building, Toronto.

Electric Fans.

The Canadian Westinghouse Company, of Hamilton, have gotten out some attractive folders on electric fans. These fans are shown in all sizes, and in some artistic styles. The season for their use will soon be here, and some helpful suggestions can be had by dealers sending for a copy.

Sleigh Bells.

The season for sleigh bells is over now but it is not too early to look up some of the newest things in this line for next season. The Carriage Mountings Co., of Toronto, are making some nice lines of bells and will be glad to acquaint dealers with them through their catalogue.

A Plumber's Encyclopedia.

Catalogue No. 33 of T. McAvity & Sons, St. John, N.B., is now ready, and the full treatment and diversity of lines

contained in it show the acquaintance this firm has of the wants of the trade they cater to. The book, with its 271 pages and nearly 1,000 illustrations, can almost be said to be a plumber's and steamfitter's encyclopedia. In the back pages are rules, tables, weights and recipes for practical use that are of value to every machanic. The McAvity firm was established in 1837, nearly 70 years ago, and since that time has always been known throughout Canada as a substantial and up-to-date business firm.

Blacksmith's Tools.

The Buffalo Forge Company have just issued Catalogue No. LG5, which should be in the hands of every dealer interested in blacksmith tools. The catalogue contains 16 pages, each of which contains, besides the ubiquitous buffalo, full information and prices on the many lines of blowers, forges, punches, shears, drills, etc. The catalogue will be sent on request, to all hardwaremen.

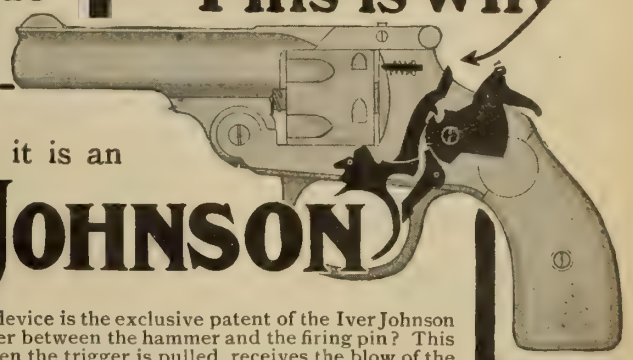
"Veronica Green."

On St. Patrick's Day the Canada Paint Co., introduced a new green which has been named "Veronica." The manufacturers are now busily engaged in sending out from their advertising department, between two and three thousand booklets to the hardware trade, drawing attention to this new window blind green. Besides the booklet, an attractive color card, showing the tone of the green, and circulars are also being distributed. Readers who have not received copies of these excellent advertisements are asked to write the manufacturers.

Hobbs Glass Catalogue.

The Hobbs Manufacturing Co., of London and Winnipeg, have compiled a complete catalogue for 1906 of their many kinds of glass. Some very pretty effects are shown in transoms, church and memorial windows, and in their ornamental and mitre cut glass. The Maximum light glass is given particular attention and illustrations are shown giving the different conditions of lighting, with and without this glass. The catalogue is accompanied with a discount sheet.

Francis-Frost Paints.



A compact, well filled catalogue has been prepared for the trade by the Francis-Frost Co., of Toronto. The firm handles a very extensive line of interior finish goods such as floor paints and surfaces, wall tints, etc., for the housecleaning season about to open, the qualities and uses of which are fully set forth. Varnishes of all kinds also have their place in this booklet, which altogether is most complete.

Watson's Trucks.

Our 100 styles of trucks are made by the John Watson Mfg. Co., of Ayr, Ont., who will be glad to tell the trade about them in their catalogue.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson **never** fails when you **pull the trigger** and never "goes off" when you don't.

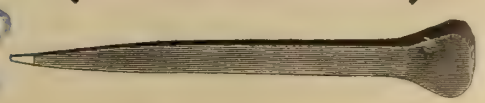
Iver Johnson Safety Automatic

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.



"M"

HORSE NAILS

are asked for by Blacksmiths who are particular about the work they turn out, because they know they can rely on MATERIAL being the best obtainable—PATTERN being right—Every Nail carefully inspected, so no chance of receiving any that are not first class.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Ontario Government's proposal to control the generation and distribution of electric power from Niagara Falls, announced during the past week, is one of the most advanced propositions yet made by a Canadian Government, and has consequently called for a wide discussion in the daily press. Briefly the proposition, as described by H. F. Gadsby in the Toronto Daily Star, is as follows :

"Like all great ideas, the Beck power policy is very simple. The Government, which owns the power for the people, controls the situation by its right of eminent domain, which it does not choose to exercise. Instead of expropriating the development plants, it buys power at $12 from the private companies, and sells it at what it will cost to transmit and distribute. For instance, Stratford wants Niagara power. Instead of driving its own bargain with the power companies, which might skin the Classic City and eat it alive, it comes to the Government Commission which has the business in hand, and makes its needs known. The Commission says : 'It will cost so-and-so to build a transmission line and erect a distributing plant to supply your town. We will charge you four and a half per cent. for the use of the public money, and that will go to create a sinking fund which will pay for the plant at the end of a term of years, when it will become the property of the province. We charge you 4½ per cent. because we can borrow at 3½. and we think you ought to pay one per cent. into the general fund of the state for the benefit of those who do not share your advantages. The rate to you will be $21.' In this way, the man who dances pays the piper, and the Government remains master and manager of the whole power field. It buys at a fixed price, transmits, sells, in fact does everything except produce, which last, some enthusiasts contend, would be a great bother anyway. This policy applies not only to Niagara power, but to all the power centres, Trent River, Kakabeka, the St. Lawrence Rapids, the Falls of the Rideau and the Ottawa ; to every part of Ontario where water runs down hill fast or far enough to make it worth while to hitch it up and set it to pulling the loads of commerce. In each of these centres the Government will charter one producing company, whose sole function will be to develop the power and sell it to the Government at a stated price, which, in turn, disposes of it to the consumer on the conditions already mentioned, and at rates just and reasonable. Capital gets its investment, the producer gets a staple market, and the people get cheap power. Some one asks, 'Why not expropriate the development plants at Niagara Falls, and be done with it ?' Mr. Beck's answer is that the Government has the whip hand in the ownership of the transmission lines. Besides, it would cost $25,000,000 to take over the power plants, and Ontario might have some trouble in borrowing that much money if Colonel Matheson had to turn the trick. Until the Gillies limit begins to pay dividends Ontario can't afford to spend twenty-five millions in one place. Beck's notion is to cut the coat according to the cloth. Expropriation would run into a tremendous pile of money. Besides, it is the duty of the law to protect the rich as well as the poor. At all events, the plan is equitable enough. If we can't have public ownership, out and out, public control, effective and thoroughgoing, is probably the next best thing. The complaint is made that $12 is too much to pay for power at the place where it is made, but the producer is entitled to his profit, and one can't expect every kick from the cow to be a milk punch. Mr. Beck says he has done some close figuring on this point and has secured a bargain-day price."

James Murchie Sons Co. will erect a saw mill near Gleason's Cove, N.B.

The city of Toronto will purchase an asphalt plant that will cost about $20,000.

The Sabey Lumber Co., Ballard, Wash., will build saw mills an Burrard Inlet, B.C.

The National Trust Co., Toronto, offer for sale the factories and lands lately held by the York Loan Co.

Peter Weiler, of Wetaskiwin, Alberta, is making arrangements to build and run a brewery at that place.

The city of Vancouver will buy a large rock quarry to supply municipal works, and will operate it by water power.

Joseph Battle, of Thorold, has been awarded the contract for grading for the electric road from St. Catharines to Welland.

Ten thousand men will be needed by J. D. McArthur, of Winnipeg, to carry on the Winnipeg-Superior section of the Grand Trunk Pacific.

A. Taylor and J. Ferguson, of Port Stanley, are connected with a company who will build and operate a cement block factory at that town.

The Hillcrest Railway Coal & Coke Co. will apply for a charter to build a railway from Morrissey, B.C., through the Crow's Nest Pass to Cardston, Alta.

The British Columbia Pine Timber Co., of Vancouver, will build a saw mill at Kaien Island, and have a contract to supply 500,000 ties for the Grand Trunk Pacific.

Another enterprise taking form in the Niagara district is the proposed steel works at Welland. Judge Muhlfelder, of Albany, and several New York and Philadelphia capitalists associated with

him were in Welland last week with Engineer Herrick, of Philadelphia, and his staff, making arrangements for erecting a large steel plant. Articles of incorporation have been applied for at a capitalization of five hundred thousand dollars, all of which is said to have been subscribed.

The capitalists behind the Canadian General Electric Co. and Canada Foundry Co. propose to organize a million dollar company to erect blast furnaces on the Niagara Peninsula to work in connection with the shipbuilding yards at Bridgeburg and supply material to the Canada Foundry and other enterprises closely allied to the parent concern. The difficulty in securing pig iron, now that the manufacture of steel rails has been taken up in Canada, and the prevailing high prices have, it is understood, much to do with the proposed enterprise. The projected furnaces will probably have an output of 200 tons a day at first, and of this, the Canada Foundry Co. would need one-half. The new company will likely be formed at once, and as the Niagara Peninsula is to be the location, the electric process of smelting may be used. The shipbuilding yards at Bridgeburg are being rushed to completion, in order that the owners, the Canadian Shipbuilding Co., may get to work immediately on the construction of the largest steamers ever built in Canada. One is a 10,000-ton steel freight steamer for the Chicago and St. Lawrence Transportation Co., and the other is a new palace steamer for the Canadian Pacific Railway for use on the upper lakes, possibly the new Victoria Harbor route.

brass castings, railway and foundry supplies, etc. The provisional directors are J. T. Ostell, Peers Davidson, A. Wainwright, F. H. Hewitt and Thornton Davidson, with chief place of business at Montreal.

Jones Underfeed Stocker Co., has been incorporated under Dominion charter with a capital stock of $150,000 for the purpose of manufacturing and dealing in stokers, furnaces, boilers, etc. The provisional directors are C. E. A. Goldman, J. McD. Miller, T. A. Silverthorn, B. A. C. Craig, D. A. Brebner, T. G. McConkey, and A. W. Holmstead, with chief place of business at Toronto.

BUILDING NOTES.

A jail to cost $3,000 will be built at Cobalt.

S. W. McKeown will build a tannery in Toronto.

W. J. Martin will build a $100,000 hotel in Montreal.

S. B. Cunningham will erect a residence in Hamilton.

J. Smith, of Grayson, Sask., will erect a stone block.

Gooderham & Worts will build a cooperage in Toronto.

$200,000 is being raised to extend Grace Hospital, Toronto.

A new Merchants' Bank building will be erected at Vegreville, Alta.

John F. Schultz, of Brantford, will build a residence to cost $2,500.

The Flesherton Hotel Company will erect a hotel at Flesherton, Ont.

Walter Davidson & Co. will build a cold storage building in Toronto.

The Royal Bank of Canada will erect a bank building at Amherst, N.S.

W. D. Douglass, of Winnipeg, will build a sheet iron working factory.

M. Rosenblat, Winnipeg, will erect a five-storey business block this year.

W. H. Lucas, Vancouver, has approved of plans for a theatre to cost $100,000.

The city of Winnipeg asks for tenders for the erection of a quarantine hospital.

Toronto will call for tenders for a new pumping station to cost about $12,000.

A Roman Catholic church will be built on Bloor street, Toronto, to cost $27,000.

The Tait-Carss Lumber Co., of Huntsville, Ont., will erect a new dry kiln, and have a railway siding run to their works.

The Standard Brick & Tile Co., of Winnipeg, ask for tenders for several buildings.

The York Radial Railway Co. have commenced work on a new power house at Keswick.

Improvements to the extent of $4,000 will be made on the Stanley House, Truro, Ont.

The Winnipeg General Hospital will have a nurses home built at once. Tenders are asked.

W. N. Morley asks for tenders for heating and ventilating a twenty-room school at Chatham.

The Alexandria Hotel Company, New Liskeard, will build temperance hotels in northern Ontario.

NEW CONSTRUCTION COMPANY.

A new construction company has been formed at Montreal, under the name of the Smith Marble & Construction Co., with a capital of $40,000. The company obtained a Federal charter and it has been decided to erect a large factory, ground for this purpose having been secured at Cote St. Louis. The new building will be two storeys high and of large proportions, the approximate cost being fixed at $10,000. They will contract for interior marble, concrete and cement flooring, tiling and general construction work, giving employment to a large staff of workmen. The officers of the company include D A Campbell, president; W. J. Henderson, secretary; A. L. Smith, treasurer; Peter Smith, managing director.

The Canadian White Co. are engaged upon an immense work in Montreal in the excavation of ground for a new cold storage property in that city.

Wm. McNally, head of the big contracting firm of Montreal, has just returned from the Old Country. Foreseeing the shortage in supplies of cement from the United States, and the incident advance of prices, Mr. McNally made arrangements with some of the Old Country manufacturers for supplies, and has chartered several steamers for the transport of cement supplies, which will deliver abundant cargo at Montreal shortly.

Varnishes must be *made* right to sell right. You cannot control the varnish trade of your locality unless the varnishes you handle have reputation and quality.

Sherwin-Williams Varnishes are a product of the best materials and highest skill in varnish making. They are known everywhere for their high standard of manufacture. They are always good, always uniform and always satisfactory.

The foundation and the life of varnish is the oil. ***The Sherwin-Williams Company*** manufactures all the oil used in its varnishes. It is made of best grade seed, carefully selected; the oil is perfectly purified and well aged—clear and brilliant. It is the best oil that can be made, and is but one of the advantages of the S-W. line.

These are points to consider. If you want varnishes that will build up your trade and bring the business to you, write today for our proposition.

BARGAIN—Thirty gallons Ark Brand mixed paint for sale at 80c. per gallon. Box 517, HARDWARE AND METAL, Toronto. [15]

HARDWARE—$5,500—Large town; one opposition. Box 519, HARDWARE AND MDTAL, Toronto.

GOOD hardware, paint, wall-paper and stove business for sale; situated on St. Catherine Street, Montreal, with good advantageous lease; stock clean and up-to-date; golden opportunity for some person desiring to enter this branch of trade; best of references given; present owner going into the mining business. Apply Box I, HARDWARE AND METAL, Montreal. [tf]

ROLLING MILL, bolt and nut works—the large and well-eqipped plant of the Louisville Bolt & Iron Works, Louisville, Kentucky. This plant is located in the centre of the manufacturing district for Southern, Western and Southwestern markets; situated in the southern part of the city, containing about 4½ acres; directly on the main line of the L. & N. R. R., with proper switching connections to the packing room and for delivery of raw material, etc. Anyone buying and operating this plant will be exempt from city taxes for a period of five years. This plant contains 48 threading, single, double and triple and 14 tapping machines; 10 hot pressed nut machines, 16 bolt forging machines for varied sizes of bolts, with necessary equipment, such as hot blast furnaces, etc.; well equipped blacksmith shop; modern machine shop for repair work, etc.; 1 Belgian train with 12-in. roughing and 8-in. 5 stand, finish train; 2 large coal fired heating furnaces, each with waste heat boiler, with necessary hot bed, finishing shears, separate engine, pumps, etc.; 1 2-stand, 3-high 20-inch muck train, complete with squeezer attached, suitable engine to drive same; 8 busheling furnaces with waste heat boilers, 1 pair hot scales, muck shears, tools and other equipment. This plant has a full equipment of scrap shears and good facilities for handling material; 1 3-stand sheet mill, new and of most modern type to produce maximum product. This plant has ample power, containing 1 275 h.p. Hamilton Corliss engine for bolt and nut department, 1 engine and dynamo, a battery of 2 Atlas Engine Co. boilers and 1 Walton boiler, 1 Stillwell heater and all necessary shafting, pulleys, etc., for running same. A most complete and well arranged nut and bolt packing room. The above machinery is in good condition and could be put in operation without delay. The office is furnished with desks, vaults, safes, etc. This offer is a splendid opportunity for a very remunerative investment with very cheap fuel and water supply. A large pool of water in the plant will supply all of the water needed about the machinery. This is an opportunity rarely found for the manufacture of these products, being the best equipped and most modern of its kind south of the Ohio river. The sale of the property becomes necessary by reason of the death of the president and chief owner This plant having direct switching connections with the L. & N. R. R., is also directly opposite and within a stone's throw of the very large and modernly equipped shops of the L. & N. R. R. Co., where a very large per cent. of the product should find a ready sale, besides the large local trade, including the Kentucky Wagon Manufacturing Co. For further particulars call on or address The Fidelity Trust Company, Louisville, Kentucky, until the 16th day of May, 1906, at which date the property will be sold at auction on the premises.

Heintz Steam Trap

is a great economizer of fuel and space. It can be placed in any position with good results.

PLUMBING AND STEAMFITTING

EARLY STEAM AND HOT WATER HEATING

By R. T. CRANE in the Valve World.

I regard as very remarkable the evolution of steam warming, which started about the year 1860, especially in the line of private house warming, as we know of no evidence that steam was used for private house warming previous to this time, but about this time it seems remarkable the number, to say the least, of able people in the engineering line who took this subject up.

Of course we had hot air furnaces previous to this time, but there was also a considerable amount of hot-water apparatus put in private houses, and this line of work appears to have started in this country about the year 1842. As noticed in the life of Mr. Nason, he brought from London the Perkins apparatus, which he introduced, and about the same time the firm of Hitchings was started, who put in the ordinary dead pressure water heating, the same as used to-day in greenhouses generally. Their apparatus consisted of coils, made of two-inch cast-iron pipe and used for heating indirectly, using cast-iron boilers. This made a very satisfactory heating apparatus, and was put by them into a large number of the very best residences in New York City. From them grew a number of other concerns that put in the same class of work. In fact, there is no doubt but hot water heating was at this time in a goodly state of art.

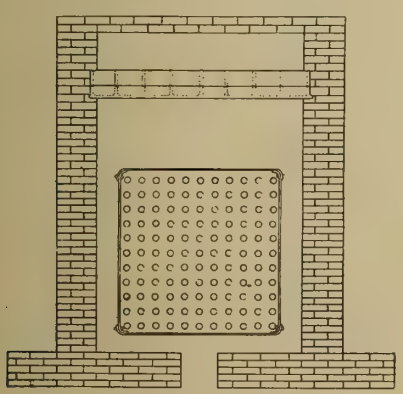

Fig. 1—Cross Section.

The English, who were decidedly further advanced in this line of work than the Americans at this time, produced some of the most skillful work I ever saw in the welding of boilers for this line of work, instead of riveting them.

Hot-water heating apparatus was found in the ruins of Pompeii, consisting of coils for heating and boiler for heating water; so it will be seen that the art of hot-water heating had been understood for a great many years. I merely mention this history in order to show that when the evolution of steam warming came it had a very formidable rival in hot-water heating.

The first private house steam warming I ever saw was an apparatus put in a house in Chicago by a New York firm, in which the manufacturer started in producing an apparatus based on the general principles of a hot-air furnace; that is, the boiler and the heating service were combined, as shown in the accompanying cuts. The boiler consisted of a square casing, which was filled with flues and encased in brick work, the fire being under it and the products of combustion going all around it and escaping at the top. Cut No. 2 shows the arrangement for having the air pass through the tubes, after which, of course, it is conducted to the rooms, through registers. This apparatus, although it was thought it would make a great success, proved a failure.

Hot Water Heating.

The correct principle in hot-water heating was known and extensively used before the introduction of steam for this purpose. Forty years ago it was used quite largely for the warming of private houses, particularly in the indirect form, as at that time no hot-water radiators were made suitable for private house work. The only thing of that nature then existing was the box coil, which necessarily would have to be screened and was not adapted for the finer class of houses. The Government, for a considerable length of time, used hot-water heating exclusively in public buildings, in which case direct heating and screened coils were used.

At that time, the method of running the supply and return pipes, so as to get the best results, was correctly understood. Since then some one made the discovery that the feed and return for the indirect radiator could be in the same pipe, which, as a novelty, is a very pretty arrangement. As a judicious proposition, however, it is absolutely absurd, for every one knows that water circulates simply from the fact that it rises as it becomes hot, and falls off as it cools off, and this action is absolutely in proportion to the height of the radiator above the boiler, and it will be readily understood that the more rapid circulation, the better will be the results obtained from the radiator. In addition to all the radiators being at a disadvantage on account of the sluggish circulation, the second radiator is at an increased disadvantage because part of its supply has been through the first radiator.

For the benefit of the less experienced engineers, the old-fashioned method of connecting radiators is explained as follows: As the supply leaves the boiler, it reduces in size until it reaches the last radiator. The return starts at the first radiator, small size, and increases in size to the last radiator on the supply line, which should here be the size of the large part of the main supply-pipe. From the last radiator the return to the boiler is direct. It will be understood that the first radiator to receive water is the first to return. Of course, the large part of the main pipe should be of equal area to that of the supply to all the radiators.

The object of the new method of connecting was to cheapen the connection, but what it gains in this respect is more than lost in the increased size of the radiators required by that method. Just what this increase in size of radiators amounts to, it would be difficult to say accurately without going into quite elaborate figuring. As a rough guess, however, we would say that the first radiator would need to have at least ten per cent. more area than under the old method of connecting, and every succeeding radiator would have to be increased three or four per cent. as the water becomes cooler. Not only is this objectionable on account of the cost of the radiator, but there is also a slight objection on account of their increased size.

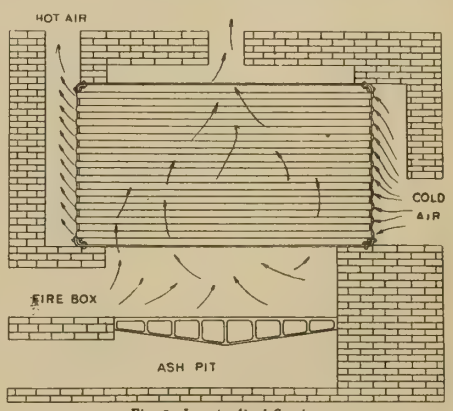

Fig. 2—Longitudinal Section

While on this subject of hot-water heating we think it well to give our views in regard to the merits of hot-water heating, compared with steam, for private house work. This question we took up a great many years ago and reached the conclusion, after experimenting, that hot water was inferior to steam, for the following reasons:

It is too slow in starting up, in view of the fact that water absorbs such a large amount of heat that a great deal longer time is required to bring the temperature of the room up to the proper point than is the case with steam. For the same reason, also, it is too slow in reducing the temperature after the house has become warm, as the large amount of heat that has been absorbed by the water has to be worked off before the house can be made comfortable.

Experiments made in this direction in my own house, many years ago, thoroughly convinced me of this fact. Much of the time the weather is such that only a small amount of heat is wanted early in the morning, but little or none being required during the remainder of the day, and as steam acts very quickly, it takes but a few moments to get heat into the radiators; then, when the time comes when no heat is required, the temperature can be very quickly reduced.

In addition to the discomfort caused by the slowness of the hot-water apparatus in warming up and cooling off, there is also a waste of fuel, as will be understood from the above remarks. Another advantage of heating by steam is that radiators may be about ten per cent. smaller than those required for hot water, under what I consider the correct way of connecting hot-water radiators, and probably twenty per cent. smaller than those required in the new system.

THE PROBLEM OF VENTILATION.

Life is sustained in the human body as in other animal organisms by the process of combustion in which the oxygen of the air is combined with the hydrogen and carbon of the assimilated food, and a new product, chiefly carbon dioxide, is formed, thus a continuous supply of air is as essential to the sustaining of life as it is to the combustion of fuel under a boiler. Here, however, all comparison ends, for the amount of air to be supplied cannot be solved by an equation of chemical reactions inasmuch as the "livable" limit is reached long before the chemical limit is approached. While the percentage of carbon dioxide in the air is a trust and worthy indication of the state of purity, it by no means accounts for the exceedingly harmful effects of impure air. The well known poisonous effect of respired air is believed to be due to organic matter exhaled from the lungs.

The following table gives the composition of pure air and of respired air:

	Pure air.	Respired air.
Oxygen	20.35	16.20
Nitrogen	78.10	75.4
Carbon dioxide	.04	3.4
Watery vapor	1.5	5.
	(Variable.)	

As the respired air is immediately diffused in the air of the room, it cannot be directly removed, but only diluted to such an extent that it ceases to be harmful. There is therefore no definite line between good and poor ventilation, and any standard of purity is arbitrary. Pure air contains three parts of carbon dioxide in 10,000; with an increase of carbon dioxide to 11 parts in 10,000, the air becomes noticeably oppressive, while an increase of three parts or a total of 6 in 10,000 is scarcely noticeable. Good ventilation is considered to exist when air contains a total of not more than from 6 to 8 parts of carbon dioxide in 10,000. Twelve or more parts of carbon dioxide in 10,000 is considered exceedingly poor ventilation and dangerous to health. It is estimated that the average adult, at rest, breathes 500 cubic inches of air per minute and exhales 17 cubic inches of carbon dioxide.

Cubic feet of air to be supplied per person for various standards of purity:

Parts carbon dioxide in 10,000.	Cu. ft. air per min. per adult.	Per cent. of respired air.
5	100	.29
6	50	.58
7	33.3	.87
8	25	.87
9	20	1.45
10	16.7	1.74
11	14.3	2.03
12	12½	2.32

Specifications of usual air supplies: Hospitals (ordinary) 35 to 40 cubic feet per minute; hospitals (epidemic) 80 cubic feet per minute; workshops, 25 cubic feet per minute; theatres, 20 to 30 cubic feet per minute; meeting halls, 20 cubic feet per minute; schools (per child), 30 cubic feet per minute; schools (per adult) 40 cubic feet per minute.

Immediately associated with the problem of ventilation is that of satisfactory heating. While the former applies chiefly to public buildings and densely peopled workshops, the latter is, outside of the tropics, a universal requirement equally applicable to buildings of all types and for all purposes. This requires the discussion of heating requirements and systems under two separate classifications, the first involving buildings requiring heating with ventilation, and the second, buildings requiring heating without ventilation.

One of the earlier and in some respects one of the best methods of heating and ventilation is the old-fashioned open fire place. The draft produced by the large chimney and open fire gives ample ventilation, but the distribution of heat is necessarily poor and as a heating system is most uneconomical. The next step in the evolution of the art was the stove, which improved the economy but sacrificed ventilation. However, its modification, the hot air furnace, gives a certain measure of ventilation, which nevertheless is too limited and unreliable to make its use permissable in large, densely peopled buildings. In addition to this it is often harmful to health, owing to the unavoidable leakage of poisonous products of combustion. Owing to the low furnace temperatures permissable, its economy is much below steam and hot water systems. The next advance is marked by the introduction of direct radiation, using steam or hot water furnaces. Meanwhile a great advantage in economy of operation provides for no ventilation other than by windows. Owing to its cheapness it has been extensively introduced and as a result the close, stuffy, steam-heated school rooms, offices and public buildings have doubtless increased materially the world's death rate. To remedy this effect, various devices have been employed with more or less success. The use of indirect radiation permits a certain amount of ventilation and elaborate systems have been advised by this system. They are, however, dependent upon such variable and uncertain conditions as the velocity and direction of the wind, and differences of temperature. On this account they failed to meet with any great measure of success wherever requirements were expected. Aspirating shafts for removing foul air in connection with indirect systems have given more effective results. In the latter systems, radiators are placed in the vent flues to produce a draft by increasing the temperature of the foul air. The cost of ventilation by this method is enormously expensive and the use of aspirating flues as substitutes for the fan is indefensible.

It is to-day a generally admitted fact that the fan system has solved the problem of successful heating and ventilation of public buildings. In recognition of this, the legislatures of several states have passed statutory laws requiring the use of the fan system of ventilation in school buildings. Among the states which have enacted such laws are New York, Massachusetts and Pennsylvania. The question is not "Shall the fan system be used?" but "How can it best be applied?" Several recent improvements have been added which have brought the art of heating and ventilation to a degree of perfection not previously known. One of the most important of these is the Buffalo Purifier and Humidifier, which removes all dust from the entering air and imparts to it the proper humidity.

SAFETY IN ACETYLENE APPARATUS.

The following conditions are those that are considered necessary by the committee appointed to inquire into the matter by the British Home Office:

The temperature of the generator should not rise above 268 degrees Fahrenheit.

The efficiency of the apparatus should be at least 90 per cent.

The size of the pipes carrying the gas should be such that there cannot be any chance of back pressure arising from this cause.

The carbide of calcium should be completely used up in the generator, none being discharged into the sewers, in a condition such that it may generate more gas.

The pressure within the generator should not exceed 11 ounces per square inch, and that in the service pipes, supplying the lights, should not exceed 2 3-4 ounces.

The generator should not give any tarry products, or similiar matter, as the result of the decomposition of the calcium carbide.

Care should be taken to prevent the stoppage of the passage of the gas, with the resultant increase of pressure, as by the action of frost, and other causes.

The apparatus should be constructed so that no lime sludge should be able to get into the pipes intended for the supply of gas to the lamps, or to the pipes intended for water circulation.

The air space in the generator should be as small as possible before charging.

The use of copper should be avoided in parts that come into contact with the acetylene gas.

I have given the above, which I have condensed more or less, from the Government report, with the figures given in the report translated into those in common use, as they appear to me to set the whole thing out very clearly when explained, and I now propose to explain them

The heat of the generator, it will be

easily understood, is a very important matter.

When the generator is in operation, the water being brought into contact with the calcium carbide, and decomposition of the carbide taking place, heat is liberated, at the same time as the gas is generated. Now, the great danger from explosions is, not the generation of gas, but the expansion of the gas, but the expansion of the gas generated owing to the heat that is liberated when the gas is generated. In a gas explosion in a house or in a coal mine they are the same, though the gases are slightly different in composition; the same thing takes place as when the gas burns harmlessly in the process of illumination, but it takes place at a very much more rapid rate. As already explained, when gas burns, in the ordinary process of illumination, heat is liberated, and it is the action of the heat upon the molecules of carbon and on the substance of which the mantles are composed which causes both to give out light. But if the gas is burnt at a very rapid rate, heat is liberated also at a very rapid rate, and the resultant gases that are formed expand so rapidly. and to such a great extent, that an enormous pressure is brought against everything with which the gas comes into contact. Hence, rooms are wrecked, as well as mine roads. The heat liberated by the action of the water upon the calcium carbide causes the gas that has been generated to expand and, in doing so, to exert a continually increasing pressure upon the walls of the apparatus. It will be seen that the acetylene generator is different from ordinary gas generator, inasmuch as with the latter all the heat is, or should be, taken out of the gas before it reaches any place where its presence can do any harm.

In the case of acetylene the matter is complicated by the fact that the gas decomposes if it is raised to a certain temperature, or if the pressure within the chamber in which it is stored rises to 30 pounds per square inch. When the temperature is named, or the pressure, is reached, the gas decomposes with very slight provocation into its constituents, carbon and hydrogen, and again with the liberation of a very large quantity of heat, with the result that the newly-liberated hydrogen gas is expanded very rapidly, or, rather, it endeavors to expand, the result being a large increase of pressure within the vessel, leading, possibly, to its bursting. For this reason, every acetylene generator is so arranged, or should be, that there is always plenty of water present to carry off any heat that may be liberated. And this is one of the points that are to be looked to in the acetylene apparatus. Increased safety is claimed by the advocates of the apparatus in which the water is brought to the carbide, and by those in which the carbide is brought to the water. I shall deal with the principal methods of construction in the course of these notes.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 20, 1906.

Early opening of navigation has set a swift pace for the plumbing trade. Everything points to unusual activity. Inquiries are numerous from all parts and all classes of goods are selling freely. River steamers are now getting ready for their first trips and the shipments of plumber's supplies will be notable on all lines. The weather has been warm and sunny during the week and this too has stimulated trade.

No change is recorded in prices.

RANGE BOILERS—Excellent trade for all lines. We quote: Iron clad, 30 gallon, $5.00; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Strong market. High prices are holding everywhere in this trade. We still quote: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS— A good trade is reported. Large shipments ready for navigation opening. Discounts on all sizes of nipples, up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE— Demand has been steady all the week and prices continue steady. We quote as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $550; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50;; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — Immense business in these lines. Large cargoes are awaiting steamers. Prices remain firm. No change in price is reported. We quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—The recent advances are likely to be maintained. The condition of the tin market is an issue of actual and possible importance for it is many years since the prices soared so high. Still prices have not actually altered. We still quote: Bar solder, half-and-half, guaranteed, 22 3-4c to 23c.; No. 2 (wiping solder), 18c.

ENAMELWARE—No change in prices. We quote as follows: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special, $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 20, 1906.

With the increase of building operations shipments to outside points keep pace. Never before have prospects been brighter or business better throughout the country. Toronto local trade has not opened up quite so well, and although picking up now, it may still be said to be light.

It is hard to get enough enamelware to supply the demand, particularly in baths, although manufacturers are working to their fullest capacity.

Good orders are being booked for boilers and supplies, for later delivery, but present business is quiet.

There have been no price changes since our last issue.

LEAD PIPE—Business continues active in all lines. Prices firm, no change. We quote: Lead pipe, 8c., discount, 20 per cent.

SOIL PIPE AND FITTINGS—A good business is being done in all lines. Prices remain the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Demand continues good with prices firm. No further changes in price. We quote: Black, 1 in. pipe, $4.37; galvanized, 1 inch pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — A large quantity of fittings continue to go out. Prices continue same as previous quotations. We quote as follows: Cast iron, elbows, tees, crosses, etc., 65 per

cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

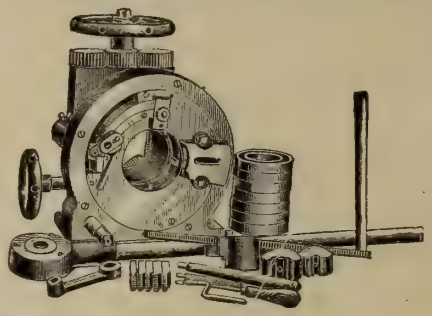
GALVANIZED IRON RANGE BOILERS—Business is quiet at present, but the orders being booked show good prospect. There are no price changes. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14.00; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Indications are that a good trade will be done this year as orders for future delivery are good; but business at present is quiet. We quote: Hot water, 47 1-2 per cent; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER—Prices are quite firm at present quotations and considerable is being asked for. Bar solder, half-and-half, guaranteed, 23 1-2c., and wiping at 21c.

ENAMELWARE—Manufacturers are still rushed to meet the demand, particularly in baths. We quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special, $22.40. Fittings extra.

PLUMBING ITEMS.



James Elliott has secured a permit to erect a plumbing shop at 838 College street, Toronto.

The Canada Brass Co., London, will install new brass working machinery and a new gas producer engine which is claimed to produce power cheaper than Niagara electricity.

James Geary, of Toronto, is suing S. F. McKinnon for $5,000 damages for the death of his son. The young man was badly scalded a month ago by the explosion of a steam pipe which he was repairing in the McKinnon building that he died soon after. His father alleges that there was negligence on Mr. McKinnon's part in not having better apparatus.

The Chasers of

Merrell Portable Hand Machines

can be sharpened by grinding and can readily be replaced by Chasers cutting any style or pitch of thread, either right or left.

Chips are not accessible to any part of the machines and the gears are completely housed from dust.

Made in four styles; Nos. 5, 6, 9 and 11.

Roof Paints Mean Business

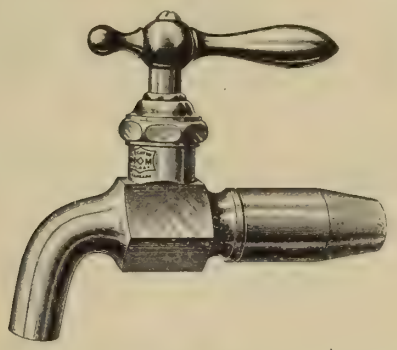
Have you a good line of Barn Paints?
Let us show you

Ramsay's Outside Paints

They sell at $1.00 a gallon, and that leaves you a handsame profit.

See our show card with our favorite Red No. 108—the correct thing for barns, roofs, bridges; also our Rubber Roofing Black.

See the price—see the profit.



Easy to sell—no unnecessary talk.

A. RAMSAY & SON COMPANY

Est. 1842 MONTREAL PAINT MAKERS

MUELLER FULLER WORK

STANDARD GRADE BIBB

The reason some fuller bibbs don't deliver a full stream is that the ball can't be pushed far enough out of the seat to admit it.

The eccentric stem in Mueller Fuller Bibbs has a sweep wide enough to push the ball well out of the seat. They admit a stream of the size carried by the pipe.

Mueller Fuller Bibbs are made in plain and hose patterns, and with tail pieces for all styles of pipe connection. Iron pipe tail pieces have the hexagon on either end desired. The bibb illustrated is the plain pattern with lead pipe tail piece.

Each bibb bear the Mueller trade mark and is *unconditionally guaranteed.*

HOW TO INVEST YOUR MONEY

to the best advantage

A good investment is one that pays.

The best investment is the one that pays the most.

Here's your chance—and no gamble about it either.

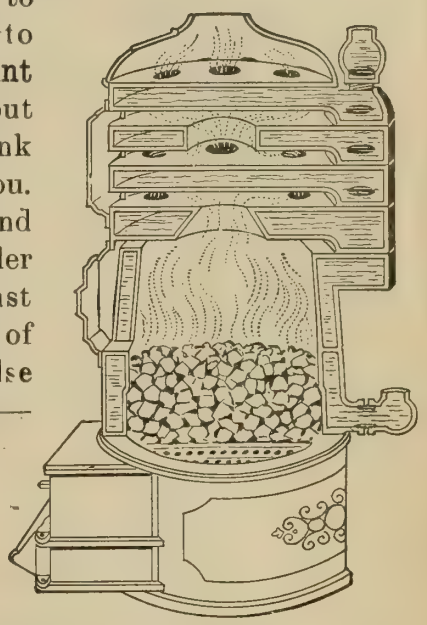
The NATURO Closet

brings big returns in profits and increase of business.

The dealer handling the NATURO has sources of trade unknown to outsiders.

In this way he never worries about competition for much business is thrown his way.

Any chance about that ?
Want to know more about it ?



Send for our Illustrated Booklet.

THE NATURO COMPANY

C. H. MUCKENHIRN, President, **Salem, N.J.**

Less work for you — and more profit with the Oxford Hot Water Boiler

¶ Of the ten sizes we make in the "B. Series," five sizes go to you with all the sections built together—whole boiler ready to connect up. ¶ On the other five sizes, you have only one joint to make to assemble the sections. That one joint takes about a quarter the time usually needed to erect a heater. Think that over. ¶ That's the first profit the Oxford Boiler gives you. Everything about it saves you bother, earns you profit and makes you reputation. ¶ Everything about the Oxford Boiler satisfies you in the first place and satisfies the buyer in the last place. The biggest thing about it is that it does save a lot of fuel. ¶ It will pay you to know why it does that and what else it does. We are waiting for the chance to tell you all that—will you ask?

The Gurney Foundry Co., Limited

We also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and complete Hotel Kitchen Outfits, Hot Water and Steam Boilers and Radiators, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

THE CARRIAGE MOUNTINGS CO., Limited

TORONTO

Pat. in Canada
g. 22, '05.

THE FRAME

of the

WIZARD ADJUSTABLE HINGE HANGER

is constructed of heavy boiler plate steel. The door plate and sliding link are made of the best quality malleable iron.

The "Wizard" has steel roller-bearings, Lateral and Vertical Adjustments, and swing-out and stay-on features.

Doors equipped with this hanger need not drag at the bottom or bind on the building.

No special track is needed for the **Wizard Adjustable.** Besides it is easy to adjust and is smooth running.

The **Wizard** is finished nicer than any other hanger on the market and each pair is packed complete with bolts.

Order the best—order **Wizards.**

CURRENT MARKET QUOTATIONS.

April 21, 1906.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

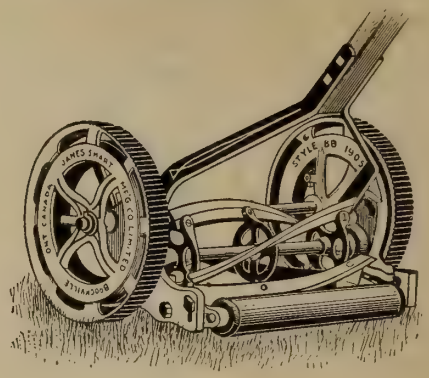
THE "MONTREAL BEAUTY" NIGHT LAMP

A Light All Night for ¼ of a Cent.



is by far the handsomest, safest, most economical and odorless Night Lamp ever invented.

It burns ordinary coal oil; one filling will burn 40 hours, or four nights, without odor. For Entries, Doorways, Stairways, Bathrooms, or anywhere; and in case of sickness this lamp will be found of great value. Highly recommended by physicians and nurses for invalid rooms.

The lamps are made of brass, nickel plated, they look like electric light when lighted, and will afford a steady light throughout the night. No attention needed; explosion impossible. Size 4 x 6 inches. **Retail at 75c. each.** Liberal discount to the trade.

Correspondence always a pleasure.
Manufactured for

L. J. A. SURVEYER, HARDWARE MERCHANT, 6 ST. LAWRENCE MAIN ST., **MONTREAL**

That Stuffy Room

is more deadily than desease itself. Bad air is the curse of crowded living. In all public places such as asylums, clubs, big offices, schools and theatres, **PURE AIR CAN BE OBTAINED ONLY BY OUR SYSTEM OF VENTILATION.**

It has stood the tests of scientific experts.

It is in use in the finest buildings in Canada.

Its price is reasonable and its benefits lasting.

Testimony

Montreal, June 7th, 1901

Messrs. J. W. Harris Co., Limited
Montreal

Dear Sirs,

I have been using your "AEOLIAN" Ventilators on several houses in this city with the best results. The tenants of these houses declared that your Ventilators are of great advantage to them. I also installed two (2) 18" on my stable and I can say that your Ventilator cannot be surpassed by any to take out the sweating or the bad smell in any room.

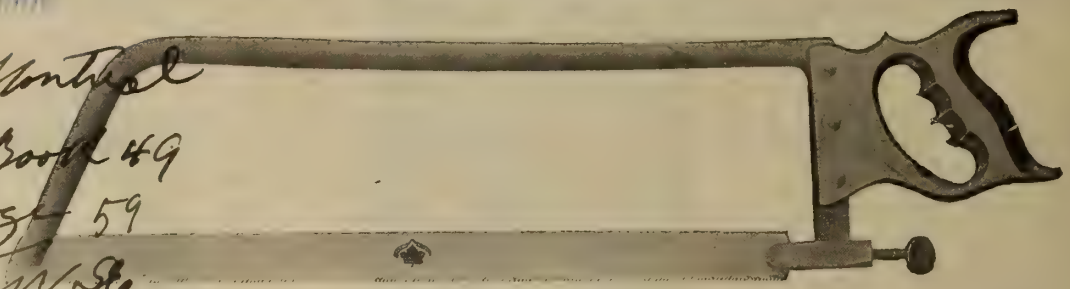
No. 92
HAND AND RIP SAWS

RETURNED
APR 28 1906



This hand saw is one of the finest on the market to-day. It is made of the highest quality of saw steel, tempered by the secret process which has made the saws of this firm so satisfactory for so many years. The grinding of the saw is carefully done, the back being thin and tapered so that the blade will not stick. The handle is fine beechwood, nicely carved and grooved for the fingers. It is made in both hand and rip, all lengths and points.

No. 22
BUTCHER SAW

RETURNED
APR 28 1906

To Montreal
cur Book 49
book 59
W Se

This saw has a razor steel blade $1\frac{1}{4}$ inches wide. The frame is oval-shaped. It can be had with a finger-grooved handle, as illustrated, or with the ordinary shaped beech handle. Various lengths, 16 to 24 inches. It is the best saw on the market for the general trade, and, like all Shurly & Dietrich saws, is the best that skilled workmen can produce.

Canadian saws are more profitable than imported, and the quality is equal. Why not make more money by selling the "Made-in-Canada" tools ?

Our travellers will quote you, or write direct.

TEN DIFFERENT COLORS

Brant-Lac is made in ten different colors.

Each color acts as a varnish wood stain, giving beautiful results.

That it is easy to sell

BRANT-LAC

is evidenced by the fact that a great number of dealers have made big sales without much effort on their part.

Take a chair, give it a coat of ground color (so as to have a uniform ground work), then apply to part of the chair a coat of Dark Mahogany. Place the chair in the window and it will draw crowds.

Order BRANT-LAC to-day.

DAVID MAXWELL & SONS, ST. MARYS, Ontario, Canada

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.
Dept. J, Hamilton, Ont.

CHARLES D. PHILLIPS,

Cables—"Machinery," Newport.
Emlyn Engineering Works, Newport, Mon., England

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

CHANGING FROM CREDIT TO CASH

That a business upon strictly a cash basis is preferable to one part cash and part credit, or to one all credit, is conceded by all progressive merchants. But while the theory and desirability are granted, the practicability is doubted, in fact, even derided. To a merchant starting a new business to open and continue an all cash trade is comparatively a simple matter; the rub comes upon changing a credit into a cash basis.

Can it be done without injury to my business? Most emphatically yes, if one has push, patience and perseverance; but if one be weak and vacillating, then a negative answer must be given. While the beginning may be marked by a decrease in the amount of sales, yet the net profits will usually be found to be as great, if not greater, than before; for in a part cash and part credit business three-fourths of the profits will result from the cash part. A large share of the items of expense, if examined carefully, will be found to consist of matters relating largely to the credit side of the ledger, such as bad debts, bookkeeper, cost of collection, extra help required, interest on capital invested, and a number of other charges traceable to the same cause In a cash business these are eliminated, while as added sources of profit we have cash discounts, increased custom because of lower prices, quick returns upon compound interest of money invested and the freedom from that peace destroyer, worry. Besides, one has his business well in hand, is ever pushing it, and with a gilt-edged credit, the best of capital.

Without doubt the first year or two will see lessened sales, but remember it is but the shrinkage from inflation to real value and that the growth afterward will be more healthy and satisfactory than it ever otherwise could be. The end is desirable, but how is it to be obtained?

In the first place, decide to change to a cash basis and do it. Do as Cortez did when entering Mexico with a handful of men against a rich and powerful nation—burn your boats behind you and press on with a firm determination to succeed, and you will. Set a day for the change, and prepare your customers for it by explaining to them as far as possible, either personally or by letter when well acquainted, by circular as we did, or through the press, the advantages to be derived therefrom by yourself, but especially by them. When we decided to make the change to a cash basis we issued a circular, which was distributed among our customers, as follows:

A Suggested Letter.

"We take pleasure in announcing to our friends and the public generally that after this date we propose to conduct our business, both buying and selling, on the cash plan. A long experience in the hardware business has convinced us that the system of selling goods on credit, to be paid for when convenient, is a most vicious one. The increased expenses of doing a credit business, on account of salaries of bookkeeper and collector, the amount of inevitable losses every year because of bad debts, which will occur notwithstanding the most careful discrimination, and the loss of interest from having a large amount of capital 'tied up' in book accounts, all render necessary a larger amount of profit, which has to be considered as business expenses and paid for by the cash buyers.

"Besides this the bad feeling constantly occurring because credit is given to one customer and refused another, and the disagreeable necessity of being obliged to 'dun' customers for past due accounts, confirm us in our determination in the future to sell for cash.

"In these times of close competition cash buyers expect, and are entitled to, the very lowest prices, and should not be required to pay the losses incident to a credit business.

"In the future it shall be our aim, by giving the most careful personal attention to every detail of our business, to satisfy the demands of close cash buyers, and to carry a still better assortment of carefully selected lines of the following goods. Endeavoring in all things to further the interest of our patrons by giving them all the advantages of a cash system, we shall hope to merit a continuance of the patronage which we have received in the past."

Other Advertising.

On the other side of the circular we called attention to the fact that we carry in stock a large and complete assortment of the following goods, purchased direct from the manufacturers for cash. The various lines of goods were mentioned under the following headings: "Builders' Hardware," "Cutlery," "Mechanics' Tools," "Butchers' Supplies," "Blacksmiths' Goods," "Farming Implements," "House Furnishing Goods," "Manufacturers' Supplies."

Show by your prices how much cheaper you can sell now than before, as you surely can. It is unnecessary to make a pro rata reduction through your stock, but make leaders many and often, display tastefully, advertise extensively and trade will be attracted. This now can be done with no fear of loss. Upon those articles where competition is severe figure very low, for here comparisons will be made but from those unattacked a good profit can be reaped. In the first case, however, good returns will be obtained because the stock is quickly turned into money and reinvested, the interest or profit being now compound instead of simple.

Can Sell Closer for Cash.

One, except in special cases, can always sell for cash closer than for credit, and in this way is able to make greater inducements to the public to trade with him than can his credit competitor. Without doubt a few customers will become offended when refused trust, but for every one thus lost two will be gained, and as the customers see that their money will go further for cash than when time is given they will soon return. A man, if he thinks he has saved money upon an article of good quality will be pleased. Such a customer is the best advertisement one can have. Sell close at a fixed price, back it up by strict honesty and courtesy, and there will be no doubt of your success.

In changing to a cash basis, to get the best results most quickly, circumstances will alter cases. With a wide fund to draw from the change can be made at once, but when restricted it is often better to allow, for convenience, a little time to those you know will pay your bill as soon as presented. They will, however, soon become educated to paying cash. But let the time given be brief as possible.

Our experience of a year in a cash business has confirmed our theory. While the amount of sales has of necessity diminished, we are constantly, by reason of reduced expenses, lower prices, etc., extending our business to fields into which we could not otherwise have gone. Moreover, while selling on much closer margins than before the change was possible, the ratio of profits to sales is greater. But best of all, when we leave at night "we go not like the galley slave, scourged to his dungeon" by worry over approaching bills, but, "sustained and soothed by an unfaltering trust, we lie down to pleasant dreams."—From Hardware Store Business Methods. Price $1.00. Sold in Canada by The MacLean Publishing Co., Toronto.

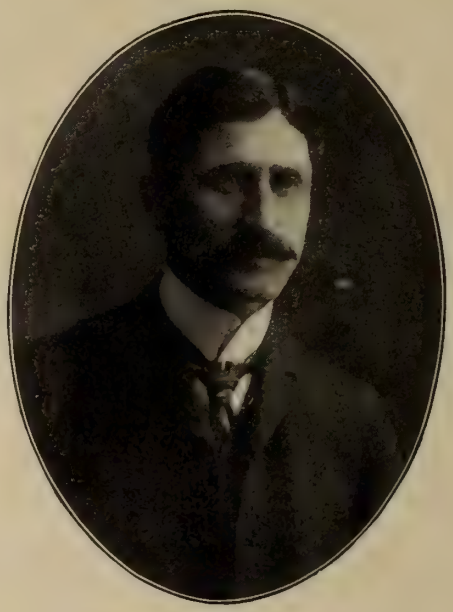
The man who looks to public applause for reward will never find satisfaction nor will he accomplish much. It is the faithful man with the humble mission who plays the important part in life by doing his duty because it is right.—Selected.

ONTARIO HARDWARE MERCHANTS ORGANIZING

An Organizer in the Field, and the Membership Rapidly Growing.

The past week has seen a great impetus given the Retail Hardware and Stove Dealers' Association organized on Good Friday, and while two weeks yet intervene before the date of the big convention to be held in St. George's Hall, Toronto, on May 15 and 16, the success of the gathering is already assured. From all parts of the province come words of encouragement for the new organization and the number of members enrolled will likely run up into the hundreds by the time the convention is called to order.

A great deal of work has already been done by the executive officers and plans for the coming convention are already under consideration. The executive will be prepared to facilitate the work of the convention by presenting a number of recommendations. A circular letter has been prepared and the call to the convention will be sent to every hardware merchant in Ontario whose address is known. Blank membership forms, receipts and other printed matter has been prepared and everything will be done systematically and in a businesslike manner.



An Organizer at Work.

Probably the most important work yet done by the executive is the appointment of an organizer. One of the letters received prior to the Good Friday convention was from O. M. Hodson, a successful hardware merchant at Bolton, who had sold out his business and said that he had intended trying to organize an association as soon as he had completed the work of making his collections. Mr. Hodson was unable to attend the convention, but last week he called upon the secretary and enrolled as a member, enthusiastically offering to do anything he could to make the association a success. "If we don't make a success of organizing an association now," said Mr. Hodson, "it will be useless to try again for five or ten years."

Mr. Hodson was takn at his word, and as he was free from store duties, he was asked on what terms he would undertake the work of organization. "I cannot give over two months," he answered, "but I will give that much of my time without charge, if my traveling expenses are guaranteed." This liberal offer was immediately communicated to the executive and an arrangement promptly completed by which Mr. Hodson started work early this week to continue until the date of the convention, after which arrangements for additional work can be made if desired. The new organizer, as will be seen by the accompanying engraving, is a man of marked intelligence, having great strength of determination and force of character. He has, in the past ten years, built up a large business at Bolton, largely by his keen business ability and knowledge of such branches of his business as tinsmithing, plumbing and steamfitting. "In the nine and a half years I was in Bolton," said Mr. Hodson, "I never let any employe open or close my store if I was in town and on only five ocassions did I break this rule." From this it can be taken for certain that the organizer will be strictly "on the job" and good results can be expected from his work.

Few Favor Affiliation.

Although the Retail Merchants' Association claim to have 150 hardwaremen as members of their association in 112

W. G. Scott
Of Scott & Murphy, Mount Forest, First Vice-President Retail Hardware and Stove Dealers' Association.

towns in Ontario, none of these have yet written arguing against a purely hardware and stove association. On the contrary many who belong to the Retail Merchants' Association are the strongest opponents of merging the hardware association into the retail merchants' organization as a hardware section. Mr. Scott, of Mount Forest, at the convention, pointed out that his most severe competition in hardware, cutlery and paints came from a druggist who he could not get at through the Retail Merchants' Association.

Ex-Mayor F. J. Marshall, of Orangeville, reports a similar experience. The three hardware merchants at Orangeville have on several occasions tried to stop price-cutting and other evils through their membership in the Retail Merchants' Association, but on every occasion they were outvoted by the grocers, general merchants, druggists, implement agents, etc., in that organization.

If the Retail Merchants' Association had done its duty by the hardware trade the work of organizing the trade would not have been left to outsiders and if its plan of organization was satisfactory, hardware merchants in Barrie, Carleton Place, Ingersoll, Mount Forest, Orangeville, St. Marys, Trenton and Waterloo, all of which towns it claims to have organized, would not be the first movers in organizing a purely hardware association.

A House of Cards.

While giving full credit to the promoters of the Retail Merchants' Association for their persistency and for partial success on some matters in the face of many obstacles, the question before the hardware trade to-day is not what that association has done for other branches of the trade nor whether the few thorns it has put upon the path of the departmental store magnates have drawn blood and made their onward career less easy.

The situation is briefly this: After several years of opportunity the Retail Merchants' Association failed to organize the hardware and stove trades so the hardware and stove dealers formed an association of their own. The retail merchants' officials then got busy and threatened due vengeance if the hardwaremen did not come into their fold. They were treated kindly, given plenty of time to speak at the convention and were then invited to co-operate in inducing the trade to attend a larger convention at a later date. Let them now induce their 150 members to join the Retail Hardware and Stove Dealers' Association and let the membership decide whether the new association will form a merger or paddle its own canoe.

In the opinion of many, however, the Retail Merchants' Association is a house of cards. The drug section, for instance, are likely at any time to go a step farther than they have already gone and ask that they be given the sole right to sell proprietory medicines in order that they may "protect the public." In thus hitting the departmental stores they will also hit the general merchants. The druggists sell candy and paints. If the confectioners and hardwaremen organize their trade might be restricted in these lines. Would it not be reasonable for the druggists, therefore, to endeavor to delay or prevent the organization of their competitors in these lines? It is impossible for such conflicting interests to do business satisfactorily in one organization. In matters of legislation the various trades can appoint committees

or delegations to work together, but that is the extent that co-operation appears at all feasible.

South Dakota's Experience.

After being for some years organized as part of the South Dakota Retail Merchants' Association, the hardware merchants of that state in January last found it necessary to form a purely hardware association, they feeling that their interests would be better served by working in a similar way to the influential and successful associations of their brother hardware merchants in North Dakota and other states. Time and again difficulties presented themselves for adjustment, but the hardware merchants were outvoted by the other retailers and the existing evils continued unabated. In the eastern, northern and western states the Retail Hardware and Stove Dealers' Asociations have worked satisfactorily and the trade has been much benefitted as a result of their existence. With their example before us it would be foolish to try the South Dakota experiment in Ontario.

A Misleading Report.

In the March number of the Retail Merchants' Journal of Canada appears a belated account of the proceedings at the semi-annual meeting of the Retail Hardware and Stove Dealers' Association of Western Canada, held in Winnipeg last February. The first copies to reach Winnipeg arrived in that city last Saturday and the account created some interest among those members of the trade whose attention was directed to it.

The heading of the article is somewhat mixed, being as follows: "Hardware and Stove Dealers of Manitoba and with West Provinces. Now Under Jurisdiction of the Western Board." Probably what was intended is "Hardware and Stove Dealers' Association of Manitoba and the Western Provinces. Now Under Jurisdiction of the Western Board."

The opening paragraph of the account is as follows:

"At their recent convention, which opened at Winnipeg on Monday, the 13th of February, the Western Retail Hardware and Stove Dealers' Association affiliated with the Retail Merchants' Association of Western Canada, and the affiliated associations were then amalgamated with the Retail Merchants' Association of Canada, and a Western Board was organized composed of officers and representatives from the affiliated associations."

As this story of amalgamation was something new to Hardware and Metal, a representative of this paper called on Secretary J. E. McRobie last Saturday to ascertain his views on the situation.

"Have you seen the March number of the Retail Merchants' Journal of Canada, Mr. McRobie?" asked Hardware and Metal.

"Yes, I have it here, and I have just read the report of our meeting last February," was the reply.

"Is the paper correct when it says that your retail hardware association of the west is under the jurisdiction of the Western Board and that the Western Board has amalgamated with the Retail Merchants' Association of Canada?"

"No, the statement is entirely wrong" was the reply, "and I fail to see how the Retail Merchants' Journal has fallen into such obvious errors. It is not correct to say that the retail hardware association of the west is under the jurisdiction of the Western Board. We are an independent association of straight line hardware dealers with our own independent executive and we recognize no outside authority."

"What are your relations with the Western Board?"

"I may say in the first place that our relations are most friendly, as the Western Board has never made any claim to the jurisdiction with which it is credited by the Retail Merchants' Journal. As was explained in Hardware and Metal two months ago, and as was clearly understood by those at the meetings, our Western Retail Hardware Association has affiliated with the Retail Merchants' Association of Western Canada for certain specific purposes. We have affiliated but we have not amalgamated; we are still two separate organizations. We have elected this Western Board in order that we can act together to secure favorable legislation affecting retailers as a general class and to oppose legislation that we consider harmful. We have elected an executive composed of members of the two associations and we call it the Western Board. Its duties are to watch and promote legislation affecting our interests, but it is not placed in authority over our hardware association."

Oscar M. Hodson, Bolton

Appointed Organizer of the Retail Hardware and Stove Dealers' Association.

"Has this Western Board been amalgamated with the Retail Merchants' Association of Canada, as the Retail Merchants' Journal says is the case?"

"No, of course it hasn't," was the reply. "You were at the meetings yourself and you know as well as I that it hasn't. It has merely affiliated in order that it may work with the organization in Toronto along legislative lines. By affiliating we have merely expressed our willingness to co-operate through the Western Board with the Retail Merchants' Association of Canada along certain lines. If we had amalgamated with that association we should now be a branch of the Retail Merchants' Association of Canada. We are not a branch, we are independent."

Asked regarding the statement in the Retail Merchants' Journal for March that the Retail Merchants' Association of Western Canada had amalgamated with the Retail Merchants of Canada, J. A. Coulson, Winnipeg, secretary of the western association, said:

"Our Retail Merchants' Association of Western Canada has not 'amalgamated' with the Retail Merchants' Association of Canada; we retain our complete independence, our own separate organization and our own separate executive. In no respect whatever do we recognize the authority of the Retail Merchants' Association of Canada and we do not consider ourselves in any way an integral part of that association. As the Retail Merchants' Association of Western Canada we have no relationship with the Retail Merchants' Association of Canada, except through the affiliation of the western board with that association as per the report of the affiliation committee which reads as follows:

"The two associations are to elect jointly a western board which, for certain common objects will affiliate with the Dominion board, whose head offices are in Toronto. The Retail Merchants' Association of Western Canada and the Retail Hardware and Stove Dealers' Association of Western Canada each retain their own identity and control their own affairs. A per capita tax of ten cents per member is to be paid to the treasurer of the western board from each association and the treasurer of the western board will pay the same to the Dominion association. It is further agreed that a special assessment not to exceed 50 cents per member is to be at the call of the western board executive and is to be used for legislative purposes only. These amounts are to be paid out of the present membership fee of each association."

"I don't consider the Retail Merchants' Association of Canada the parent of the western associations," added Secretary Coulson, "the eastern organization had absolutely nothing whatever to do with the formation of the western associations."

UNIFORM SIZE MILK CANS.

The House of Commons Committee on Agriculture has recommended to Parliament the adoption of the bill providing for a standard can of eight-gallon capacity for the sale of milk, a half standard of four gallons, and a quarter standard of two gallons, and declaring that all such vessels shall be subject to Government inspection. The proposed law imposes a penalty of $50 and the forfeiture of the cans for neglect to secure the departmental inspection. The committee advised the printing of a large number of copies of the intended law, so that they can be circulated to obtain the opinion of the country thereon.

There are periods in almost every man's life when he would rather have a lie told about him than the truth.

EFFECTIVE HARDWARE ADVERTISING

Spring trade is still active, so that a hardwareman can continue to advertise paints, sporting goods, freezers, enamelware, netting, etc.

* * *

Small ads, on single lines, take well. You could run three or four 35-line ads in different parts of the same paper—once a week anyway. Sometimes arrange one of the ads so that the appeal is direct to contractors; other times, farmers; still other times, the housewife.

* * *

When you are pushing certain goods in the paper try to secure some original window display for the same goods. By keeping in touch with manufacturers, writing for latest catalogues, etc., you can secure suggestions and in many cases attractive display signs—free of cost.

* * *

Don't allow any opportunity to go by that means "information" for you. Don't imitate the publicity methods of your competitor, but note how the "big fellows" in other cities do things.

* * *

The up-to-date manufacturer never allows the story he is telling you to become "dry." The relationship of the manufacturer to you is the relationship of you to the people. The moral is obvious.

* * *

The Orillia Hardware Co., (S. Mullett, W. E. Anthony), who succeeded G. H. White, got out a very attractive "inaugural" announcement.

* * *

The Orillia Hardware Co. start off with the motto: "By fair dealing and attention to business to merit a share of your trade."

* * *

Photographs of Mr. Mullett and Mr. Anthony grace the top right and left hand corners. In about the centre of the sheet there appears a sort of valedictory from Mr. White, in which he seizes the opportunity to eulogize his successors—their ability, their methods.

Hardware News.

VOL. 1 THESSALON, FRIDAY, MAR. 23, 1906 NO. 7

Ready Mixed Paints.

The home should be spotless but not paintless. For interior painting try Robertson's Ready Mixed Paint. We stock it in 36 different colors, it will not fade, check nor blister, 1 gallon covers 360 square feet two coats, every package guaranteed, none better at the price, $1.50 per gallon.

Churches Cold Water Alabastine in 12 colors, best for plastered walls, put up in 25c and 50c packages, 50c worth will cover fifty square yards.

We have a full stock of Waggon, Carriage and Marine Paints, Paint Oils, Turpentine, Varnishes, Stains, Enamels, Etc. Our Prices Are Right.

BRIDGE BROS.,
THE LEADING HARDWARE
THESSALON.

Bridge Bros., Thessalon, prepare "live" advertisements for their store. The specimen shown on this page is representative of the Hardware News series. They do not waste any space. Neither do they cram. In keeping their advertisements pretty much to one line they command more attention and are able to make the "talks" more effective.

* * *

That Bridge Bros. are "alert," the following letter from them testifies:

"There being only one weekly newspaper in our town, we advertise in it, using liberal space. In a town where there are one or more papers published, we think it would be profitable to advertise in each, using small space.

"As a rule, we give a short talk by way of introduction; in advertising a cook stove, we might start off by saying: 'When buying a cook stove, the oven construction should be the first consideration, etc.,' then follow up by giving the good points and baking qualities of our stove, and the price. We have adopted the 'Hardware News' plan, filling in the matter each week. We make a yearly contract for space. We keep a record of advertising expenditure, but think it would be a hard matter to correctly estimate the returns. No doubt advertising is profitable, if properly looked after. An ad changed every few months may be all right for the printer, but it of little value to the man who pays for the space. Hardware advertising appears to be neglected, particularly in small towns, possibly because many towns support only one hardware store, and in such cases very likely it is thought unnecessary to advertise.

"It pays to advertise! As an instance, quite recently we advertised a certain safety razor. The day after our ad appeared, one of our customers called and purchased one of the razors. He remarked that he had been wanting one for some time, and intended sending out of town for it. We display these razors in a prominent place in our store, and this man drops in every day or so, yet he did not know we sold them until he read our ad. On this razor we made sufficient profit to pay for our advertisement; possibly a number of sales resulted from the ad. We could mention numerous instances of this kind."

* * *

"Housekeepers' Needs" is a catchy little ad that tells a good deal in a few words.

HOUSEKEEPERS' NEEDS!

Washers, Wringers, Mangles,
Carpet Sweepers,
Household Scales,
Carpet Beaters and
Stretchers, Etc

LIMITED
Cor. King and Victoria Sts., Toronto

INDUSTRIAL FUTURE OF CENTRAL CANADA

An Address by T. R. Deacon, before the Canadian Club of Winnipeg.

On April 11 Mr. Thos. R. Deacon, manager of the Manitoba Iron Works, delivered an address on "The Industrial Future of Central Canada" before the Canadian Club of Winnipeg. In interesting fashion he sketched the magnificent possibilities of the "wilds" of New Ontario, concluding his address with a reference to the water power proposals now engaging the attention of the people of Winnipeg. The address was as follows:

"I want to say something about Central Canada, and for my purposes I shall call that part of this country lying between the meridian of North Bay, and the base of the Rocky Mountains, Central Canada. I wish to make a few remarks on the present and the future of this part of our country and some particular reference to Winnipeg. Owing to the fact that prior to the building of the Canadian Pacific Railway, that part of Central Canada lying east of Lake of the Woods was absolutely unknown and unsurveyed territory, no importance was attached to it, and since the completion of that road so great has been the development in the better known and older sections of Canada and the capital and energy of the country has been so completely utilized to their industries and the exploitation of their resources that little opportunity has been afforded to take stock of the potential resources of the part under discussion, and in fact it is only recently that serious attention has been turned that way. And yet, gentlemen, I desire to express it as my sincere conviction that from the fountain of that great wilderness will spring a lasting stream of material wealth that, dividing into two great branches, the one flowing east and the other west, shall rival the agricultural wealth of the west or the industrial wealth of the east.

Exploring New Ontario.

In 1900 the then premier of Ontario, Hon. G. W. Ross, decided to have an exploration of that part of the country called New Ontario made, and accordingly sent out ten parties, each one in charge of a practical surveyor and including a geologist and expert timber estimator. The net result of their exploration fully justified the most sanguine expectations in regard to the natural wealth and fertility of the country. A clay belt comprising an area of at least 16,000,000 acres was discovered, nearly all of which is well adapted for cultivation. This almost unbroken stretch of good farming land, is equal in size to the twenty-two counties of old Ontario, lying west of the County of York in a line drawn from Toronto to Midland, which portion of Ontario was shown at the last census to be inhabited by a population of 1,081,000 people. This clay belt was found to cover an area as large as the States of Massachusetts, Connecticut, Rhode Island and Delaware combined and about half the size of the State of New York, or half the size of England. It was found to be remarkably well watered by numerous rivers, the principal of these being the Moose, flowing into James Bay, and its tributaries, the Abitibi, Metagami, Missanabie and the Albany, with its tributaries; the Kenogomi and Ogoki. Including all areas of good agricultural land in what is called New Ontario there is found to be 20,000,000 acres, or 125,000 farms of 160

Thos. R. Deacon, Winnipeg
Manager of the Manitoba Iron Works.

acres each, capable of supporting a population of 1,000,000 people.

Climate is Mild.

The climate, which is the necessary accompaniment of any lasting colonization, has been found to present no obstacle to successful settlement. The vegetables found growing at the Hudson's Bay Company's posts were a living evidence of the possibilities of successful agriculture. Even at Albany post the potato tops were green on Sept. 25. On Oct. 3 the garden produce had not been removed from the ground for the Winter at Albany post. Only two nights of frost were observed up to Oct. 28.

"From careful estimates made it has been found that there is still in the crown unsold in Ontario white and red pine, which will produce at least 6,000,000,000 feet of lumber, which at present prices has a cash value of not less than $42,000,000 on the stump, which if invested at only 3 per cent. would net the province an annual income of $1,260,000. It was found also that extensive forests of spruce, jack pine and poplar existed, estimated to contain 300,000,000 cords of pulp wood, which at 40c. per cord would give the province an annual income of $3,600,000 for all time to come. From a very conservative estimate of the annual growth of pulp wood, it is found that it amounts to no less than 6,000,000 cords, or sufficient to employ 200 pulp mills continually, employing 100,000 men.

Mineral Wealth.

"I have so far spoken only of the agricultural and forest wealth of that portion of Central Canada lying east of Winnipeg; let me give you a few facts as regards the known mineral wealth, as this is more likely to have a direct bearing on the City of Winnipeg. I will briefly mention first that deposits of nickel in the Sudbury district have been found upon development to be practically inexhaustible. By means of diamond drills half a dozen of which have been used day and night for some years in one locality, millions of tons of high-grade nickel ore has been blocked out and large bodies of ore located, upon which no development has yet been done. As regards the cobalt, nickel, arsenides and silver deposits in the Temiskaming district, I am indebted to a recent report of the Bureau of Mines for some valuable information regarding this discovery. The archaean protaxis or that rocky region which stretches away from the St. Lawrence River, expanding to the northwest, is producing a group of what may be called unique or, at least, comparatively rare minerals. The nickel mines of Sudbury, which is one of the two important nickel producing localities of the world, produces with the nickel and copper, the bye-products, platinum and palladium. The corundum deposits of North Hastings and South Renfrew now supply by far the greater part of the corundum used in the world and the recently discovered cobalt, nickel and arsenides of Temiskaming district have suddenly acquired an importance as a producer of cobalt, which is only rivalled by the deposits of Saxony. As to what we may reasonably hope for from the building of the Grand Trunk Pacific road through that new region, let me remind you, gentlemen, that

these great cobalt, nickel and silver deposits were discovered by the building of the Temiskaming & Northern Ontario Railway within a short distance of the shore of Lake Temiskaming, which has been a well-traveled water route to the north for over 200 years, and the Sudbury deposits were discovered by the building of the Canadian Pacific Railway. These two instances show the possibilities there are for the discovery of important mineral bearing areas in the vast hinterland of Ontario. The latest report from the Bureau of Mines of Ontario, which keeps a close record of all matters pertaining to mining in the province, show that there have actually been shipped from Cobalt already, $3,500,000 worth of silver alone. At the Pan-American exhibition at Buffalo in 1901, twenty-one awards were made to the Ontario exhibit, viz., three gold medals, seven silver medals, six bronze medals, and five "honorable mentions," a larger number than the exhibit of any state or country save Mexico alone.

Iron Deposits.

"I have yet to mention, so far as we are directly concerned, the most important of all, viz., the iron industry. A large number of very extensive and very valuable deposits of iron have been discovered in the Lake Superior region, and I have recently learned that the largest single deposit of iron ore known in the world has recently been located in this district. The iron and steel industries are the foundation of our modern civilization. To realize our dependence upon them, try to imagine what the state of affairs would be if our iron and steel industries were swept away. Transportation by railway and boat would cease; the machinery in our factories would be banished, and the comforts and luxuries of our life destroyed. We might better do without silver or gold.

"It has now been proven that the vast deposits of iron ore in Canada known these many years, but hitherto considered valueless because of their high sulphur contents, may now be utilized by the use of water power for electric smelting, with which the country is richly blessed, and this means that Central Canada can undertake for herself this basic industry of modern civilization without having to import coal or ore for that purpose. Using entirely Canadian products Canadian manufacturers will be able to make the tools and agricultural implements for the settlers pouring into the country; will be able to build the bridges and boats and railways which are required to open up still other new territories and make the machinery to be used in thousands of busy factories.

Winnipeg Should Profit.

"How does this affect Winnipeg? Shall she become really a manufacturing city of importance, with solid, stable industries, or shall she be content to remain an aggregate of people living on commissions skimmed from the stream of agricultural products flowing eastward and the tide of manufactured articles flowing westward to supply the territory to the west. That depends. Other centres with various advantages and ambitions will no doubt spring up as rivals to draw trade away and new routes may be opened up which may deflect a large part of the stream of commerce from Winnipeg.

"It is a fundamental law of the political economy of manufacture that institutions which are engaged in the production of finished goods should be located as nearly as possible, having due regard for the conditions of production, in close proximity to the point of consumption. And because the principles of that law have been misapplied it has become the habit to regard Winnipeg as a point unsuitable for manufacturing. I believe I can demonstrate that this is a fallacy and that within a very short time it will be amply shown that Winnipeg is most fortunately placed, and that once her public men are thoroughly awakened to her opportunities an era of development and expansion and solid industrial growth will dawn, the full effulgence of whose glorious noontide no man would dare predict. We live in the electric age and Winnipeg is within easy distance of an enormous source of this form of energy.

"I have for some time been giving a considerable amount of thought to this question, and a short time ago I made a rough computation, erring on the safe side, of the amount of energy available at this city from a single source, namely the Winnipeg River. I do not wish to be tediously technical; you all know that the Winnipeg River drains an immense area of country stretching from far south in the State of Minnesota, north of the Canadian Pacific Railway, and extending eastward from the Lake of the Woods, at least 200 miles.

Water Power Available in Winnipeg.

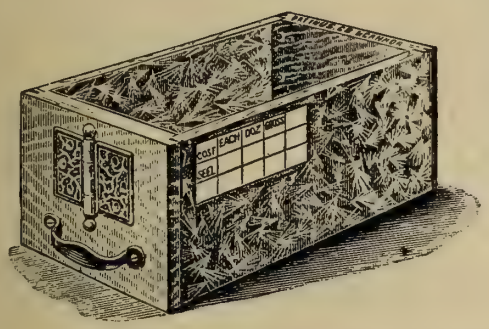
"The basin of the Lake of the Woods is over 25,000 square miles in extent. Now, all the water that can, by any possibility, flow down the Winnipeg River in any single year is the amount that has been precipitated as rain and snow for a corresponding length of time. Observation has shown the amount precipitated over this area to be about 30 inches annually. Probably one-quarter of this is lost by percolation into the soil and utilized for plant growth, one-quarter may be re-evaporated, leaving 50 per cent. to flow by conduction down the Winnipeg River. The fall from the Lake of the Woods to Lake Winnipeg is about 355 feet. A computation of this volume of water falling 355 feet gives the enormous total of 1,097,000 horse power as the potential energy of the Winnipeg River between the Lake of the Woods and Lake Winnipeg. Fairly efficient turbines will develop 80 per cent. of the potential energy of a fall and this gives us 882,000 effective horse power available for work. Allowing the extreme of 25 per cent. for loss in various ways, we still have over half a million horsepower available for actual use, which, I believe, the genius of the Canadian engineering profession is quite competent to deliver to the wheels of commerce in our factories.

"But we must have raw material, they say. Very good. Pig iron and wheat are the basis of all commerce in these days and we are planted right in the midst of the future sources of these commodities.

"I firmly believe, and I want to go on record as having expressed this opinion, that the building of the new Grand Trunk Pacific will be followed by discoveries of iron ore gigantic in extent, and this opinion is based, not on mere mental impression, but on sound scientific deductions. I feel that northwestern Ontario is on the eve of a tremendous mineral development, particularly in iron, copper, nickel and silver ore. Large smelters will be erected to smelt by electricity, using the powers of the Kaministiqua, the Nipigon, the Michipicoten, and other rivers, and from this source Winnipeg will have her supplies of raw material.

"Our market is at our doors. Planted on the very shore of a golden ocean of waving grain fields, dotted with innumerable archipelagoes of prosperous homesteads inhabited by a people rich from the products of the soil, our material prosperity cannot fail to be very great. Since the advent of human life on this planet men have sought the end of the rainbow under which is hidden the pot of gold, and suddenly the world has learned that it rests upon the earth in the wheat fields of Western Canada, and the multitudes have set their faces thitherward. If we are the worthy sons of our sires we will avail ourselves of this heritage and continue to demonstrate to all the world that Canadians are as bold in conception, as intelligent in design, and as skilful in execution as any other race.

"Canadian brawn and Canadian brain have achieved things in the past, and have overcome difficulties that to a less vigorous people might seem insurmountably stupenduous. But our reward is near if we but devote our energies to building up our manufactures side by side with our agricultural development, not in conflict, but in harmonious combination, so that all the various occupations of our people shall be interwoven for the general good of all, so that all shall be peacefully and happily employed in the various acts of agriculture, commerce and of manufacture."



EX-MAYOR LAPORTE HONORED.

On Wednesday afternoon, the 25th inst., H. Laporte, formerly mayor of Montreal, was presented with a magnificent cabinet of silver, said to be the finest ever seen in the city. The gift is from the citizens of Montreal and is in recognition of the services rendered the city during his regime not only as mayor but as alderman and chairman of the finance committee.

A GOOD INVESTMENT

The advertisement which we reproduce on this page for the **Bennett Patent Shelf Box** cost $3.56 per insertion. The first advertisement appeared in our issue of April 14th, and within one week after the first insertion, 8 enquiries were received from firms who intimated they were in the market for shelf boxes. The second advertisement appeared in our issue of 21st, and by Thursday, 24th, 4 enquiries had been received. The enquiries were received from 5 different provinces, showing the wide circulation of HARDWARE AND METAL.

METAL SHELF BOXES

Wood drawers cost too much money, consume too much space, and besides shrinking and splitting are hard on shelves. The

BENNETT PATENT SHELF BOX

has none of these drawbacks. It is low in price. It saves 20 per cent. shelf room.

It is made with metal sides and fine oak front, hard oil finish. It is a "thing of beauty and a joy for ever."

Our **Price List** shows how hardwaremen, whose shelves are fitted up with wood drawers, waste money. If you are interested in **store economy**, write for price list.

CAMERON & CAMPBELL, Toronto, Sole Manufacturers for Canada

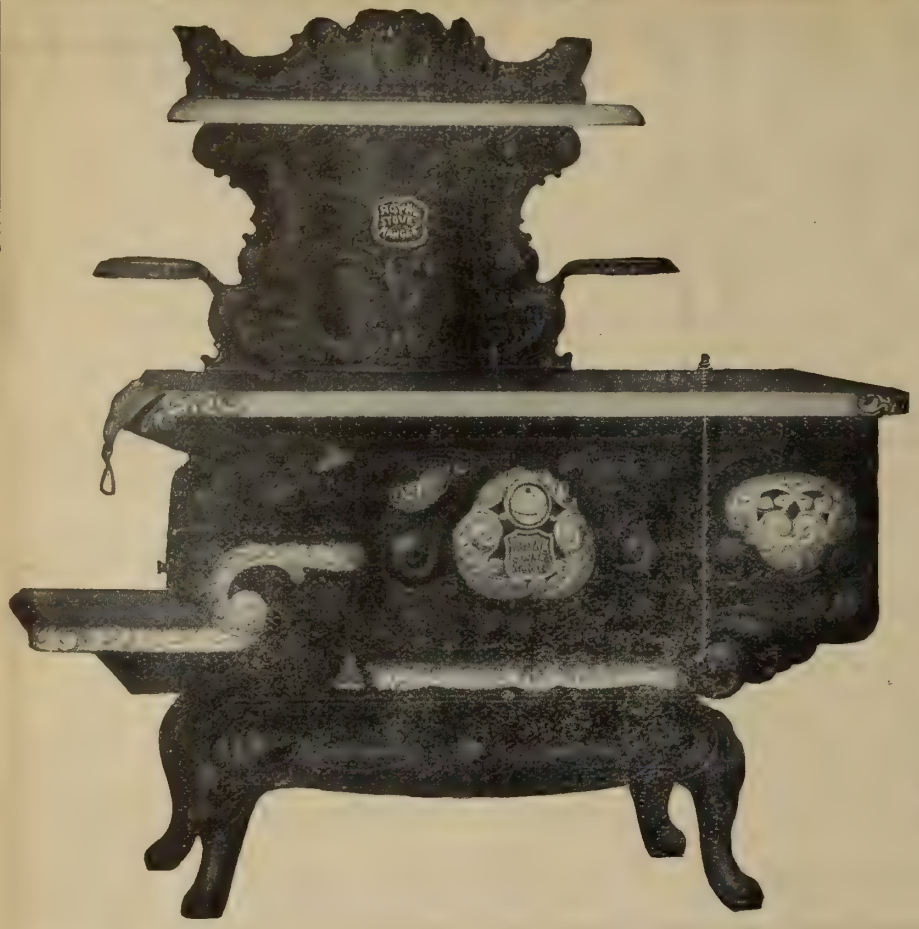
Manufacturers—Have you confidence in your own goods?
—Do you want the trade to have confidence in them?
—Do you want to reach the trade in every Province of the Dominion?
—Do you want to reach them QUICKLY, EFFECTIVELY and ECONOMICALLY?

There is only one paper in Canada big enough for the job.

HARDWARE AND METAL has "made good." We have dozens of testimonial letters which have come to us unsolicited from the best and most reliable firms in Canada.

Tell the trade it isn't up-hill work to sell your goods. Give them each week the arguments that will sell the lines you make, and your sales will increase.

8 Customers for $3.56



Is it worth $3.56 to be put in touch with 8 good prospective customers?

If you're going to be a 20th century firm you must use 20th century methods.

Enquire for any size of space in which you may be interested.

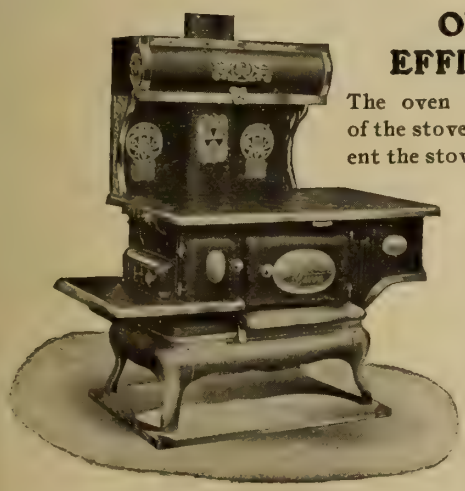
"Everything for the Tinshop."

KLEAN and QUICK



A slow fire is the sure indication of a dirty fire, than which there is nothing more annoying. Slow and dirty fires are caused by poorly designed grates, lining rests and ill-shapen fire boxes. The fire in

"The JOY MALLEABLE STEEL RANGE"

is a clean quick fire, because the grates are properly designed. There are no ledges where ashes can rest. The fire-box is narrow, deep and straight; ashes cannot cling to its sides. One revolution of the duplex grates gives a **CLEAN QUICK FIRE.** Linings are not cemented, but dove-tail, and are easily removed. Cogs are on the outside, where fire, ashes or dirt cannot harm or clog them. We want you to judge the merits of **THE JOY.** Are you open to conviction? A line will bring us together.

Joy Mfg. Co.

32 Humberside Ave. ...Toronto

OVEN EFFICIENCY

The oven is the "heart" of the stove. If it is inefficient the stove is "dead."

In

THE EMPIRE QUEEN RANGE

the highest degree of oven efficiency is attained. Heat is evenly and quickly distributed, and this does not mean, as with many other stoves, a lack of heat from the cooking holes So you see **THE EMPIRE QUEEN RANGE** is a "sort" of "useful" stove—just the kind of stove enterprising dealers should handle. Information gladly furnished.

MAIL ORDER COMPETITION.

The retail and wholesale merchants in Canada do not realize to what extent their confreres in the United States suffer from competition with some of the large mail order houses, particularly such firms as Sears, Roebuck & Co., and Montgomery, Ward & Co. We have a good deal of competition in Canada, but it is not nearly so severe. The way in which a western retailer met this competition is being told throughout the trade in the States, and no doubt many of our readers will find it worth while publishing in their local papers. Recently a church congregation in a little town built a church. To pay for it they were obliged to call upon the merchants of the community for donations. The merchants responded liberally, and $300 was raised from this source. The last man to subscribe was John Smith, jeweler. "I will give you $5 if you will let me add something to your subscription list," he said. Permission was accorded him and he wrote at the bottom of the list:

John Smith, jeweler	$5.00
Sears, Roebuck & Co.	0
Montgomery, Ward & Co.	0

The church people saw the point when the minister read from the pulpit the list of donors to the building fund. Since the dedication of the church there have been no mail orders sent out from that little town.

A SERIOUS OUTLOOK.

The evils of price-cutting and of lack of organization are well exemplified by the conditions existing in the plumbing and steamfitting trades in Toronto at the present time. Since the disruption of the Master Plumbers' Association matters have been going from bad to worse and with supply houses giving a very short line of credit, other master plumbers going after business on a cut-throat basis, and a general public inflamed against all plumbers by reading sensational articles in the daily press, the master plumbers with small capital are in a similar position to that of the immortal Light Brigade, with cannons in front of them, cannons to right of them and cannons to left of them.

Under the regime of the association the plumbing business in Toronto was conducted on a basis of 25 per cent. added to cost of labor and material, out of this the expense of running the business being taken and the remainder being profit. The large concerns which dealt in "bonuses" and "I.O.U.'s" had, of course, additional sources of profit, but the great majority of the smaller master plumbers did business on the 25 per cent. basis, making a fair living for themselves, paying their bills, and enjoying life as most men should.

But the association is gone and with no organization to restrain them, master plumbers are taking contracts on margins as low as 5 per cent. over cost of labor and material, this in many cases not even allowing journeymen's wages to the contractor, and when mistakes in estimating take place the work is done below cost. On this small margin, too, the cost of advertising, bookkeeping and shop maintenance cannot be covered and the plumber or fitter appears to be in business chiefly to prove to the general public that work can be done for much less than was charged during the association's existence. In brief, the Toronto plumber is now robbing himself in order to prove that the general public was robbed by him during the past two or three years.

The end is in sight for many now in business if this condition lasts much longer. The supply houses are protecting themselves by giving shorter credits as without the association their assurance of the payment of accounts is gone. Those whose capital is limited are being called upon for security for goods before delivery and master plumbers have been forced to hand over insurance policies, book debts, etc., to the supply houses to secure material for contracts in hand. If the slashing of contract prices continues all Summer, and without any organization it is probable that it will, there will be many failures to report before Fall.

Some firms are refusing to bid on contracts at all, letting their competitors fill up with the profitless jobs, and retaining only enough men to do the jobbing work coming to the shop. They figure that it is better to do a small business and do it at a profit than to have the endless work and worry of a lot of contracts in which there is no profit. They also have the chance of getting profitable contracts when the price-cutters have loaded themselves up with work. Intolerable though the present situation is, it is likely to be of advantage to the larger firms—the ones who profited most by the association and brought about its collapse through the indefensible bonus system. By the crushing out of business of the weaker men those remaining will profit.

The only remedy is organization. Let an effort be made to reorganize the master plumbers' ball team and by developing the social feature try and overcome the jealousies which are bound to result from the senseless price-cutting going on. It should not be a hard matter to bring home these truths to the trade and the time to do it is now. The longer the present situation is allowed to last the harder it will be to organize and effect a remedy.

PRIZE OFFERS CLOSE MONDAY.

The window dressing and ad writing competitions announced a month ago close on Monday, but any letter or photo bearing a postmark of that day will be accepted in the competitions.

As will be remembered, we offered a prize of $5 for the best seasonable window display made in April. This allowed plenty of scope and the number of entries should be large, as the clerk who wins a name for himself as a window dresser is carving out a future for himself.

The same can be said of our ad-writing competition. Though the prize offered is only a fountain pen, a good fountain pen such as we will give will be a useful article for the clerk who wins the prize. This competition is confined to clerks as we desire to encourage salesmen behind the counter to take an interest in the advertising proposition. It is one of the most important branches of salesmanship—the knowing how to bring customers to the store.

If you have been intending to enter the competitions and haven't yet done so "do it now."

Charity begins at home and often remains at home all the week, excepting Sunday, when she goes to church to say nice things about herself.

TO LEGALIZE TRADE ASSOCIATIONS

A deputation of representative jobbers and retailers, mostly connected with the grocery trade, interviewed the Dominion Government at Ottawa last Friday and asked for legislation placing retail merchants on a par with professional men, corporations, labor unions, etc., in making trade agreements. H. N. Kittson, of Hamilton, was the chief spokesman of the deputation, he speaking in part as follows:

"To meet the competition of trade pirates who live by and who sell goods without reference to the fact that they should be paid for, it has been found necessary in self-preservation for the trade to make selling arrangements amongst themselves, to endeavor where possible to have uniform selling prices with regard to proprietary articles. It has been found necessary to systematize the selling of goods with certain restrictions as to price. It has been found necessary to make an effort to induce manufacturers to grant a differential in price between the price at which they sell to the wholesale merchant and to the retail merchant. It has been found necessary, in a word, to take collective action.

"Where there is undue and wasteful competition the wisest thing, the only thing, that those suffering from it can do, be they wholesalers or manufacturers, is to come to an arrangement to remedy the evil. But there section 520 of the Criminal Code intervenes, and says that 'every one is guilty of an indictable offence and liable to a penalty of $4,000 or less or two years' imprisonment, who conspires, combines, agrees or arranges with any other person to unduly prevent, limit or lessen the manufacture or production or to unduly enhance the price thereof.'

Review of Legislation on Combines.

"The legislation on the subject of combinations may be shortly reviewed as follows: The original section simply imposed penalties in respect of conspiracy to commit some unlawful act unduly, and what was or might be unlawful was determined by the general law of the land on the subject, but the difficulty of applying the law led the Parliament to rectify this by striking out the word 'unduly,' but this made the enforcement of the law so difficult that in 1900 Parliament struck out the word 'unlawful' and restored the word 'unduly,' and as a result of this it became a conspiracy to do the things unduly referred to in this section.

"So under the law as it stands at present if it can be shown that any two or more merchants or manufacturers unite to secure a fair margin of profit they expose themselves to the risk of being dragged before the police court and charged as criminals with violating the criminal law. It may be claimed that the word 'unduly' provides reasonable protection to the public against prosecution prompted by malice, or by Crown attorneys animated by excessive zeal, but as a matter of fact the proceedings in Toronto and Hamilton and elsewhere against mercantile associations and combinations are fostered and encouraged by the vagueness and indefiniteness implied by the word 'unduly.' The proceedings instituted against the Dominion Wholesale Grocers' Guild is a striking case in point. Upon the information and complaint of a detective—absolutely ignorant of the condition of trade, absolutely ignorant of the alleged facts set forth in his complaint, unsupported by any corroborative evidence—a wholesale prosecution has been instituted against the Dominion Wholesale Grocers Guild, an association which has been in existence for twenty years, comprising with a few exceptions the whole wholesale grocery trade of the Dominion—of men who have a reputation for honor and integrity, and enjoying the respect of the community in which they live, who are charged under this section, among other things with the crime of selling sugar on a basis of 4 per cent. gross profit, and tobacco at a profit of 3 3-4 per cent., while the cost of doing business is from 7 to 9 per cent. Their innocence or guilt in respect of such alleged crime cannot be ascertained in any other way than by the annoyance, the inconvenience, the enormous expense of a public trial. It may be advanced that the remedy is to prove the allegations untrue, but that is only an apparent remedy. The result of one suit will not procure immunity to the manufacturer or to the merchant from further prosecution.

"In the case of the King vs. Elliott, Justice Osler in giving judgment made use of these words: 'What is undue with reference to the acts which are the subject of a conspiracy, combination, agreement or arrangement, is now a question of fact upon the circumstances of each particular case.' Now, in the case of a wholesale merchant there might be 100 different rates of profit, and each particular case might be made the basis of a prosecution. In view of this judgment the manufacturer or the merchant does not know, cannot know, what trade agreements he may legally enter into.

Criminality Not Intended.

"We submit that it was not the intention of the Government to put the stigma of criminality upon any person or association who agrees with any person to endeavor to place his business upon a basis to enable him to pay his debts. Trade grievances or unhealthy trade conditions cannot be ameliorated by individual effort; collective effort is absolutely necessary to accomplish any practical result.

"Railway companies fix railway rates by collective action.

"Telegraph companies regulate rates by collective action.

"Life insurance companies fix their rates by collective action.

"Fire insurance companies fix their rates by collective action.

"Physicians arrange their fees by concerted action.

"Lawyers call the legislation to their aid to ensure to them reasonable remuneration for their work.

"Trade unions are authorized by law to combine to secure reasonable wages.

"Why should merchants and manufacturers be differentiated against and made liable to criminal prosecution for using methods to advance their interests, which are legally sanctioned and permitted with respect to other classes of the community?

"The result is that the manufacturing, wholesale and retail trades of Canada to-day do not know where they stand in connection with trade matters. Methods of business which have been in vogue for centuries are to-day being attacked as illegal. Up to the year 1900 if a person did not unduly limit the facilities for transportation, production, manufacture, supply, storing or dealing in any article, or if a person did not unduly prevent, limit or lessen the manufacture or production of the article or unreasonably enhance its price or unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of an article, and did not create a monopoly so as to unlawfully restrain or injure trade and bring himself within what would be known to be the common law of England, he felt perfectly secure in the conduct of his business. To-day he may not unduly limit the facilities for transportation, he may not prevent, limit or lessen the manufacture or production of goods; he may not unduly prevent or lessen competition in the production, manufacture, etc., of goods; in fact, he may do the contrary of these things by combining

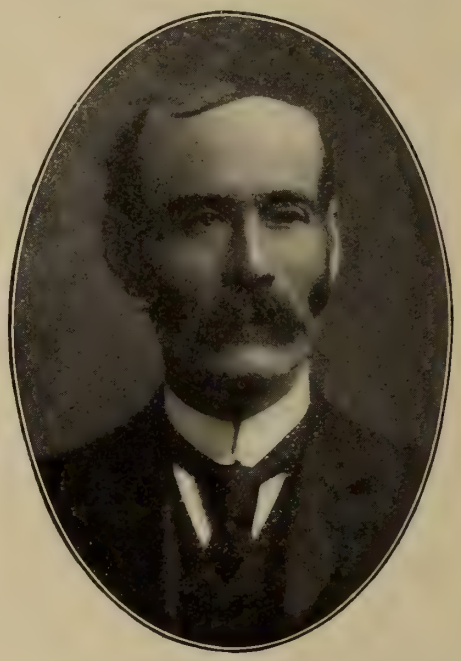
with those in the same trade with himself, and may lessen the price of the articles in which he deals to the consumer, and yet he may be held liable under these circumstances to have infringed sub-section B in the absolute in which it stands to-day.

"It is most respectfully urged that section B of the Act should be at once restored to where it stood in 1900, by adding the word 'unlawfully;' that the word 'unduly,' where it appears in section should be given an interpretation which leaves no doubt as to the meaning of the law.

The Proposed Reform.

"That most careful inquiry and investigation should be made into the trade and commercial interests of the country so as to enable Canadian merchants and manufacturers and business men to know with some certainty the agreements which it should and may be lawful for them to enter into for the protection and existence of the various businesses in which they are respectively engaged, and that in making such inquiry and investigation due consideration should be given not only to the interests of the Canadian consumer, but also to the trade and commercial interests of the country generally, to the foreign competition to which our merchants and manufacturers are subjected, and to the trade conditions and laws which exist in England and the United States in respect to such matters."

A SUCCESSFUL RETAILER.



Twenty-six years in the hardware business at the same stand has been the experience of J. Woodsworth, Toronto, who a short time ago sold out to S. M. Burt. In the year 1879 Mr. Woodsworth after having been nine years in the employ of J. & W. McKeough, of Chatham, came to Toronto and purchased the hardware business at 842 Yonge street.

Many changes have taken place since then in the appearance of that section, and the only business still remaining that was there at the time Mr. Woodsworth started is the store of J. W. Oram. In the hardware business, too, there have been many changes since '79. Those were the days of cut nails, and when ready-mixed paints were almost unknown, the hardwareman being then the paint maker for his customers.

Mr. Woodsworth adopted a cash basis from the start, which he always adhered to, with the exception of some builders' accounts which for convenience were allowed to run thirty days. His fairness in dealing, and his close attention to the details of business by which his store was always kept up-to-date, won for Mr. Woodsworth an enviable place among the retail hardwaremen of Toronto. Other interests, however, were demanding a great deal of Mr. Woodsworth's time, and it was for the purpose of devoting himself more to them that he decided to sell the business he so successfully built up.

WESTERN HARDWARE ASSOCIATION AND MR. TROWERN.

While the Ontario hardwaremen are considering the question whether it is advisable that the association which they have organized should be made an independent body or whether it should be made a section of the Retail Merchants' Association of Canada, it may be of interest to recall the exact nature of the relationship existing between the Retail

J. Woodsworth, Toronto.

Hardware and Stove Dealers' Association of Western Canada and the association dominated by Mr. Trowern. Especially is this the case since the exact nature and extent of that relationship is not so well understood in the west as it should be.

In the Summer of 1904 the Retail Merchants' and Stove Dealers' Association of Western Canada was organized at a meeting held in Winnipeg, and it was in fact a development of the local Winnipeg association. It was a spontaneous development, and the claim of the Retail Merchants' Association of Canada to be the "parent" body is too absurd to be given consideration.

In February, 1905, the Retail Merchants' Association of Western Canada was organized, this also being an absolutely independent body composed of the general merchants and grocers of the west. Its relations with the hardware association were friendly on the whole, but the two associations were quite distinct.

In February last the two associations met in Winnipeg in separate halls in the same building. Both meetings were addressed by E. M. Trowern, Toronto, secretary of the Retail Merchants' Association of Canada, and he strongly urged that they should amalgamate with his association. Partly as a result of his representations it was finally decided that the two western associations should affiliate for certain purposes and that they should, in joint session, elect a "western board" whose duty it should be to advance certain common projects. Amalgamation or union in one association was not to be seriously entertained for each association has its own interests and those interests may sometimes conflict. But while amalgamation was impracticable it was recognized that the associations had some interests in common, and the western board was elected to further those interests and watch legislation affecting all retailers.

So far we see no connection with the Retail Merchants' Association of Canada, and it must be evident that the tie that binds the western hardwaremen to that association is of the lightest possible character. The only connection that the Western Retail Hardware and Stove Dealers' Association has with the Retail Merchants' Association of Canada is through the western board on which they have representation. The connection is indirect; there is no direct relationship.

The western board has not amalgamated with the Retail Merchants' Association of Canada; it has merely affiliated. Hence, the only connection of the Western Hardware Association with Mr. Trowern's association is an indirect relationship via the western board, which has merely affiliated with the Retail Merchants' Association of Canada to promote legislation and take action on certain subjects on which it seems advisable that the merchants of the whole Dominion should be able to make their wishes known.

The Western Hardware Association retains its autonomy and its own individuality. If Mr. Trowern refuses to co-operate with an independent Ontario organization of hardwaremen he will extend to Ontario hardwaremen treatment different from that which he promised the hardwaremen of the west.

HARDWARE TRADE GOSSIP

Quebec.

Sidney R. Sheldon, of Galt, was a visitor in Montreal this week.

J. Steel, tinsmith, East Templeton, Que., is retiring from business.

F. X. Boisvert, machinist, Quebec, offers to compromise with his creditors.

W. S. Leslie, of A. C. Leslie & Co., spent this week traveling through Ontario.

Robert Munro, president of the Canada Paint Co., spent a part of last week in Toronto.

Wm. Copping, lumber merchant of Joliette, spent a day during the week in Montreal.

John A. McIntosh, general merchant, of Vankleek Hill, spent a day of the past week in Montreal.

The Peerless Gas Light Company, Montreal, has been registered. S. G. Bergevin is managing director.

Geo. G. Scott, western representative of the Pedlar People in Winnipeg, spent the early part of the week in Montreal.

H. L. Holstein, general merchant, of Whitney, Nipissing District, paid a business visit to the metropolis a few days ago.

F. C. Lariviere, head of the well-known hardware firm of Amiot, Lecours & Lariviere, Montreal, has been in New York for the past ten days.

Among the outside hardwaremen to visit Montreal during the week were: C. H. Whitworth, Smith's Falls, and J. A. McDonald, Williamstown.

Geo. Ramsden, Caverhill, Learmont & Co's representative in Eastern Ontario, spent Thursday of this week at the firm's Montreal headquarters.

G. I. Delisle, woolen manufacturer of Yamachiche, called on some of the Montreal hardware jobbers during the week to place orders for supplies.

E. W. McCartney, of the Canadian Shovel Co., of Hamilton, visited Montreal this week. Mr. McCartney reported business active with his company.

Paul R. Hanson, manager of the Montreal branch of the Canadian Rubber Co., has just returned from another successful trip to Toronto and points west.

Among the hardware merchants who visited Montreal during the week were Chas Milot, of St. Monique; Damase Lavallee, of St. Gabriel de Brandon and James McGowan, of St. Martine, Que.

The steamer Turbinia has arrived at Montreal on her way back from Cuba, where she has been making trips during the Winter. She will take a considerable quantity of Montreal freight to Toronto and Hamilton, sailing on Monday of next week.

D. Lorne McGibbon, managing director of the Canadian Rubber Co., Limited, was hastened home from his holidays in the Bermudas by the sad death of his brother R. D. McGibbon, K.C. The bereavement has elicited widespread sympathy in the leading social business and professional circles.

The Pedlar People, of Oshawa, have secured the sole agency for Canada of the Clinton electrically welded fabric for reinforced concrete. This product is described as ideal for the support of concrete and as a testimony to the up-to-date popularity of it, sole use of this fabric has been employed in the new steel sheds of the Montreal harbor.

Alex. Chalmers of the firm of James Chalmers & Son, Granby, Que., was in Montreal this week. Mr. Chalmers stated that he had wound up his business in Granby and was seeking new fields to conquer. He left for points in Saskatchewan, where he intends to investigate the possibilities for business ventures.

J. Craig, representing Lewis Bros., has succeeded to J. R. McMillan's territory in Western Ontario, and is now calling on the latter's friends in the trade. Mr. McMillan will assume control of G. B. Morris' stock in Guelph, the first of June, and he has the best wishes of Hardware and Metal in his undertaking.

The George Phillips Cut Glass & Cutlery Co., of Sheffield, Eng., have decided to open commodious premises in Montreal in the quarters now occupied by the L. H. Packard Co., McGill street. Mr. Phillips, head of the company, is widely known in Montreal where he resided for years. He recently purchased the business which will be carried on under his own name. This company has absorbed the Walker & Phillips Co. and the Crystal Cut Glass Co., of Montreal.

Ontario.

J. B. Hawkins, of Goderich, is selling out his hardware stock.

Jaspar Nicholson has opened up a new hardware store at Goderich.

J. L. Thompson, hardwareman, of Elmvale, spent a day or two in Toronto.

A. McEdward, St. Catharines, has sold his hardware business to Watt & Bate.

A new plumbing and heating business has been started in Berlin by Wm. Knell & Co.

McKinnon & Walker, formerly of Caledonia, have opened up a hardware store at Cobalt.

H. E. Ecklin, of Keewatin, has sold his stock of hardware to the Keewatin Hardware Co.

Adam Taylor, of the Taylor-Forbes Company, Limited, Guelph, was in Toronto on Thursday.

McNeil & Reader, Alvinston, blacksmiths and carriage manufacturers, have dissolved partnership.

Chadwick Bros., manufacturers of brass goods, Hamilton, have suffered small damage by fire.

Mr. Turnbull, of Turnbull & Howard, Brantford, called on hardware jobbers in Toronto on Thursday.

Arch. McFarlane, manufacturers' agent, Montreal, was a visitor in Toronto during the week.

John H. Bell, hardware dealer, of Mattawa, Ont., has opened up a branch hardware store at Cobalt.

B. Noble, of Smith Bros & Co., London, was in Toronto for a day or two during the past week.

F. O. Lewis, of Lewis Bros., Montreal, was a visitor in Toronto and an exhibitor at the Horse Show this week.

M. W. Doherty, manager of the Guelph Stove Co., will resign his position on the 1st of May to become general manager of the Sussex Manufacturing Co., Sussex, N.B.

F. J. Marshall, Orangeville, who has sold his hardware and furniture business to his nephews, Gillespie Bros., has been on a trip to New York. Mr. Marshall may locate in Western Canada.

C. E. Noble, Dundalk, spent a few days in Toronto last week, being a delegate to the convention of school trustees dealing with educational matters before the Ontario Government.

J. H. Warwick, plumber, 338 Wellesley street, Toronto, is laying in a stock of hardware, following the example of several other Toronto plumbers who are looking to hardware for the profit they are not getting in plumbing and steamfitting.

Oscar M. Hodson, Bolton, who recently disposed of his hardware, stove and plumbing business to Messrs. Smith & Schaefer, commenced work on Wednesday as organizer of the newly organized Retail Hardware and Stove Dealers' Association of Ontario.

Sylvester & Dougherty, hardware dealers, of Stouffville, have dissolved partnership. The business will be carried on by Sylvester Bros., a brother of the first named partner joining in the firm. Mr. Dougherty will centre his interest in the lumber business in New Ontario.

Western Canada.

Archie MacFarlane, manufacturers' agent, of Montreal, was in Winnipeg last week calling on the hardware trade.

The warehouse of the Prairie City Oil Co. was destroyed by fire last week.

The Canada Paint Company will make extensive additions this Summer to their Winnipeg warehouse on Point Douglas avenue in order to provide additional storage facilities.

Work was begun last week on the new Winnipeg warehouse of Marshall Wells & Co. The structure will have a frontage of 132 feet on Market street and a depth of 129 feet; it will be four storeys high and will cost, exclusive of the heating and plumbing, $110,000. It is to be completed by December 1 next.

Maritime Provinces.

T. McAvity & Sons, St. John, N.B., suffered slight damage by fire a few days ago, the loss being fully covered by insurance.

United States.

Albert Lucas, one of the trustees of the firm of John Lucas & Co., paint manufacturers, Philadelphia, died on April 10.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Antimony—Still scarce and the advance maintained.
Shovels—An advance of $1 a dozen, now $11.50.
Paris Green—Likely to be scarce. Arsenic advanced the cause.
Ingot Tin—Another advance. Soaring tendency sharp.
Zinc—Firmed up $6.75, firmly held.
Shellac Varnish—Advance maintained.
Pig Lead—Slight decline in price; $4.25 and $4.35 quotations.
Square Nuts—New lists have been issued.

TORONTO.

Nuts—New lists are out—same discounts.
Antimony—Prices have advanced 1½ cents.
Ingot Tin—Another 1c. jump upward has been made.
Shovels—An advance of $1 has been made on some lines.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 27, 1906.

Shovels are the feature this week. An advance took place of a dollar a dozen on plain shovels, making the quotations read $11.50 a dozen for Olds, Hills and Beaver. The shovel market is now well controlled by Canadian makers and the demand is keeping the big mills busy. The large wholesale hardware firms are alive with business and trade is increasing in shelf goods every day. At present there are many orders called "rush" awaiting shipment by steamers and owing to the rush of cargoes the boats are unable to supply all their patrons at the one time. Thus a number of orders have to wait their turn. However, navigation is now in fair running order and plenty of trade will be moving next week. It must be remembered that though shovels have advanced, the discount remains the same. The drop in shot, recorded last week, has been maintained and just now the ammunition trade is stirring slightly and may be expected to loom into a feature shortly.

Summer goods and cutlery continue to increase in demand.

AXES—Our prices are as follows: $7.60 to $9.50 per doz.; double bitt axes $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—We are quoting: $4.25 for cold blast.

RIVETS AND BURRS—Steady business continually increasing is the report. Quotations as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—No great trade is expected in this line until June and July. Business is still active, though, and sales are seasonable. We quote as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS—The recent advance has been well maintained, and we are still quoting the following discounts: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS — Satisfactory trade is reported. Demand fine and no change in prices. We are quoting as follows: ⅜ and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSENAILS — Good demand. All grades selling well. Prices are still held as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Demand is only fair. Steadiness marks the trade generally. We quote $2.15 per keg f.o.b., Montreal.

CUT NAILS—Good trade. Plenty of demand, no feature noticeable. Price unchanged at $2.20 f.o.b., Montreal.

HORSESHOES—Large orders are the prevailing reports with market steady. Our quotations are as follows: P.B. new pattern, base price, $3.50 per 100 pounds; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Steadily increasing demand for fishing tackle, etc., also baseball equipments, cricket, etc. The ammunition is beginning to open up well and soon the greater demand will set in.

BUILDING PAPER—All lines are selling well and the demand seems to be increasing. Carpet felt is $55 per ton. Dry sheathing is now quoted at 35c., while tar sheathing is 45c.

CEMENT AND FIRE BRICK—Steadily increasing demand with every probability of it increasing. The American shortage is not discussed any more in the trade, but there is no doubt about higher prices being in sight. Customers in need of cement would do well to lay in a stock now while it is available at a reasonable price, as advances are promised by knowing ones. Fire brick is, of course, in excellent demand and the calls are numerous on the big firms here to meet it. We quote: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We quote the following: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—This continues to be one of the active lines of the present market. Our prices remain as follows: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Orders continue to be very numerous and extend over a large territory The price remains $1.45 per hundred sq. ft.

BINDER TWINE—Conditions are unchanged, and we are still unable to give prices.

RAW FURS—Prices to dealers are as follows:

		No. 1.	No. 2.	No. 3.	No. 4
Bear	Black	$12 00	$8 00	$4 00	$1 00
"	Yearlings	7 00	5 00	2 00	0 30

Wolverine		5 00 to 6 00			

A stove foundry is contemplated to extend the Osgood business, Galt.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto April 27, 1906.

An advance of one dollar has been made on shovels, making quotations $11.50 for Olds, Hills and Beaver. Discount remains the same. This brings shovels back in price to where they were some time ago.

Some minor changes have been made in small and medium size bolts and nuts. New lists are out, but the discount remains the same.

An active demand has been experienced for building paper since the reduction in price some time ago. All lines are now having heavy sales.

Cement remains the same in price, although the demand is getting to be very heavy. If the present rate of consumption keeps up it is not unlikely that there will be a shortage of Portland before the building season closes.

Sporting goods are particularly active in all Summer lines. Despite the mild Winter some good size orders have been booked for skates for next season, on account of a rebate being given for certain sized orders. These terms expire May 1. Hockey sticks are also selling well.

AXES AND HANDLES—Orders are being booked now for future delivery, although present business is quiet.

CUTLERY AND SILVERWARE—These lines are showing an increased activity both in present business and in booked orders.

SPORTING GOODS—Summer goods are very active just now and large orders are being taken for hockey sticks for next season.

WASHING MACHINES— Trade is fairly active at present.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING — A large amount of business continues to be done in netting.

GALVANIZED WIRE— We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—An active demand is experienced. Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The usual large volume of business is being done. Prices are being cut some.

CUT NAILS—This line also shows greater sales.

HORSENAILS—Business shows an improvement now that the weather has become dry. No price changes.

HORSE SHOES—The Spring has ushered in a good trade. Market firm. We still quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—The usual amount of business is being done.

RIVETS AND BURRS—Prices remain the same with an active business.

SCREWS—Business in screws continues good and a large amount is going forward.

BOLTS AND NUTS—Some small changes have been made in the price of small and medium size nuts. Discounts remain the same.

CORDAGE—We now quote as follows: On binder twine, 500 feet, 10c. lb:; 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13 1-4c. lb. Golden Crown, 500 feet, 9 3-4c. lb. On Gold Medal Brand (imported), 600 feet, 12 1-4c.; 650 feet, 13 1-4c. Discount for car lots: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

CEMENT—Cement continues to be called for in large quantities, and fears are entertained in some quarters that a shortage will be felt before the end of the season. Prices remain the same. We are quoting as follows: For carload orders, f.o.b., Toronto, Canadian Portland, $2.00. For smaller orders ex. warehouse, Canadian Portland, $2.15 upwards.

FIRE BRICK — There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

BUILDING PAPER—An increasing demand has been felt for building paper since the reduction a short time ago. There are no further changes.

HIDES—The supply continues light with prices unchanged. The 14c. tug-of-war between holders and tanners last week in Chicago ended in victory for the men with the hides. Nevertheless buyers here say there will be no further advance. For fur skins buyers are offering more for dark mink, muskrat and skunk.

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 27, 1906.

Again antimony holds the interest. Some dealers are quoting another cent advance and others maintain the 22½ cents. At any rate no fresh news has been received that would loosen the congestion of the market and the scarcity is reported to be even worse than at first. Babbit makers are now in the position of being compelled to arrange prices and discounts differently. One of the largest makers of babbit have withdrawn their discount which was running in their advertisement.

Ingot tin has advanced again and is now quoted at 43 to 43½ cents, and the tendency is towards still higher things. Pig lead has dropped to $4.25 and $4.35. This is partly due to the Summer freight rates, which in a line like this have something to do always with the price. Zinc has firmed up and is firmly held at $6.75. Tin plates have a higher tendency and while quotations seem to be the same, higher prices are expected.

CANADA PLATES—Trade is good and the demand has increased over last week. We are still quoting as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

COPPER—Firmness rules and an advance is expected any day. Scarcity seems to be the report at every hand. We still quote: Ingot copper, 20½c. to 21c.; sheet copper, base size, 25c.

INGOT TIN—Jobbers are dealing with all orders on their merits as heretofore, and an advance has been made to 43 and 43½ cents.

PIG LEAD—Market easier and prices have dropped. We quote $4.25 and $4.35 per hundred pounds.

PIG IRON—Quotations are still for orders from stock. Inquiries are fair. We quote:

"Dom.," No. 1	$19.50 to $20.00	delivered	Montreal.
Usual difference in price for ower grades			
Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19.00	"	"
" No. 3	18.50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	24.00	"	"
" (special)	23.00	"	"
" No. 3 (soft)	22 75	"	"
Summerlee No. 1	25.00	"	"
Clarence No. 1	20.00	"	"
" No. 3	19 50	"	"

BOILER TUBES—Our prices: British and American tubes, 1¼ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15½c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to

20c.; "Air Hardening," 65c. per lb.; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL — We are still quoting as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Our prices are as follows: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Ruling prices are as follows: Queen's Head, 28 gauge, $4.35; 26 gauge, $4.10; 22 to 24 gauge $3.85; 16 to 20 gauge, $3.60; Apollo, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Comet, 28 gauge, $4.15 to $4.45; 26 gauge, $3.90; 22 and 24 gauge, $3.60; 16 to 20 gauge, $3.45; Bell brand, 28 gauge, $4.30 to $4.35; Fleur-de-Lis, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; in less than case lots, 25c. extra.

BLACK SHEETS—Our prices remain as follows: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

ANTIMONY—None till July is the report current. We quote 22 and 22½ cents.

TIN PLATES—Some noticeable advances made by dealers last week have been maintained, but the trade generally while active is unchanged. The following prices are still obtainable: Cokes, base size, 1C 14 x 20, $4; charcoal base size, 1C 14 x 20, $4.25.

TERNE PLATES—Dealers are again quoting quite generally $6.85.

INGOT ZINC—The market is quiet. Very little is being sold, and prices remain 6¾c. to 7c.

SHEET ZINC—We still quote: $7.50 in casks, $7.75 in less than casks.

SHEET LEAD—Our prices: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON—Local jobbers are still quoting $2.05 f.o.b. Montreal.

OLD MATERIAL — Our quotations are as follows: Copper wire, 15c.; light copper, 14c.; heavy red brass, 13½c.; yellow brass, 10c.; light brass, 7½c.; lead, 3¼c.; zinc, 4c.; machinery cast scrap, $13.50; wrought scrap, $12; stove plate scrap, $11; mixed rags, 90c. to $1 per 100 lbs.; old rubbers, 7½c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 27, 1906.

Again we have to report higher prices for antimony and ingot tin. Ingot tin has moved up another cent and is now at 42 cents, just ten cents higher than our quotations of a year ago. So far the high price of ingots has not affected the tin plate figures as the stocks of the latter have been bought at the lower prices ruling last Fall. If the shortage in the supply available continues through the Summer, plates must go up, however. The tin market is very firm with considerable trade doing.

Antimony has made the remarkable jump of 1½ cents per pound, last week's prediction that the price would likely go over £100 in England having been realized. The ruling price in Toronto to-day is 23½ cents as compared with 9 to 9½ cents a year ago, the price having nearly tripled in twelve months. It is evident that the end of the upward move has not yet been reached and some expect to see the price reach 25 cents before any weakening materializes. Solder and babbit metal are both feeling the strength in tin and antimony.

Sheet metals are beginning to move more freely with the general opening of navigation and fine Spring weather.

PIG IRON—Demand continues active with prices firm. An order for 1,000 tons placed this week could not be secured before July delivery.

Middlesboro, f.o.b., Toronto	$21 50	$22 50
Hamilton, No. 1, at furnace		21 00
" No. 2, "		20 50
Midland, No 1, "		21 00
" No. 2, "		20 50
Radnor, at furnace		30 00
Londonderry, f.o.b. Toronto, No. 1		22 00
" " No. 2		21 50

BAR IRON — The market is quite strong and the ruling price continues at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Still higher is the report, and prices are moved up another cent. For large lots we now quote 42c. per pound.

TIN PLATES—Demand is increasing with prices firm but unchanged.

GALVANIZED SHEETS—Prices are unchanged and a good demand exists.

BRASS——The market is firm and prices steady. Buying is fairly active and quotations 23c to 24c. per pound.

BOILER PLATES AND TUBES—The demand is steady and we continue to quote: Plates, per 100 lbs., $2.20; heads, per 100 lbs., $2.45; tubes, per 100 feet, 1 1-2 inch, $8.50; 2, $8.70; 2 1-2, $10.50; 3, $11.80; 3 1-2, $15.80; 4, $20.00. Terms, 2 per cent. off.

LEAD—The market continues to fluctuate, but we still quote: Canadian pig lead at $4.40 and English pig at $4.65 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—Business is increasing and prices are quite firm. We still quote as follows: 7 1-4c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

COPPER— The tendency is upward and prices are held strongly. We still quote: Ingot copper, $20 per 100 lbs. and sheet copper, $25 per 100 lbs.

ANTIMONY—This metal is still soaring and another advance has been made, we now quoting 23½c. per pound.

OLD MATERIAL—The demand is particularly good now in all lines, and prices will not drop much for another month. Dealers' buying prices continue as follows: Heavy copper and wire, 15 1-2c. per lb.; light copper, 13 3-4c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $10 to $10.50, No. 2 wrought $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7 1-4c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Until the coal strike is over no settled prices can be quoted. We quote nominally:

Anthracite in cars at bridges, egg, stove and nut, $5.50; grate, $5.25; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; 3-4 inch, $1.40; run of mine, $1.30; nut, $1.25; N.P. and S., $1.00; slack, 75c.; box cars 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1 1--4 inch, $2.60; 3-4 inch, $2.50; mine run, $2.40; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS.

Advance proofs furnished HARDWARE AND METAL by The Iron Trade Review, Cleveland, April 26, 1906.

The probable demand for structural material which will result from the earthquake and fire at San Francisco has been the leading topic of discussion in the trade during the past week. Very few of the large skyscrapers require more than 3,000 to 4,000 tons of structural steel, and many buildings could be erected without involving a tonnage very large in comparison with the product of the country. It is recalled that the business following the Baltimore fire was distinctly disappointing, although the buying resulting from that disaster has not yet ended. Accurate testimony concerning the effects of the fire and earthquake on buildings of steel construction is lacking, but all the information obtainable furnishes strong evidence of the superiority of these buildings, which apparently withstood the shocks without great damage and suffered less severely than other buildings from the fire.

Reports from nearly all centres indicate more activity in the pig iron market. This is particularly true in New York, where, however, buyers show a disposition to be conervative about placing orders for delivery during the second half of the year. One more furnace has been banked in Pennsylvania on account of the strike of the anthracite miners, and it is expected that others will soon be compelled to do likewise. The lowest prices for northern irons are apparently being made by Ohio furnaces, some of which have sold as low as $16 at the plants.

During the period in which the concession of $2 per ton was allowed to implement manufacturers on steel bars, it is estimated that about 200,000 tons were sold. Bar iron and steel bars are now

very nearly the same price, $30 Pittsburg.

The demand for structural material is stronger. A number of railroads have placed large sized orders for bridges and a heavy buying movement for new York is expected at an early date. Inquiries are now pending for 25,000 steel cars which will require a very large tonnage of plates. Boiler makers and other smaller consumers of plates are buying in increased quantities. The sheet market shows improvement in most places, and reports of shading of quotations are not confirmed. The tin plate market also shows improvement. Specifications of wire products are very heavy, and while new business is not strong in some centres, it is heavier than usual at this time of the year. The demand for merchant pipe is satisfactory, and the requirements in the rebuilding of San Francisco are expected to be heavy.

The demand for crude steel is greater than the supply. Forging billets are very scarce and quoted at $35 Chicago. Wire rods are very difficult to obtain. The scarcity of sheet bars has necessitated the closing of several plants of the American Sheet & Tin Plate Co.

Old material shows some little improvement in the east, but it is still stagnant in the central west.

The quarterly report of the steel corporation reflects the very prosperous condition of business during the period which it covers.

U. S. IRON AND STEEL MARKETS.

From the Iron Age, April 26, 1906.

The San Francisco disaster has had a rather disturbing effect upon the broader minded leaders of the iron industry who are concerned chiefly with its influence upon the general financial situation. The splendid vindication of the modern steel cage construction is exceedingly gratifying, but some very erroneous and exaggerated statements have gained currency as to the tonnage of shapes which will be required at once. Data collected by the highest authority show that up to date from the time of the fire, Baltimore used 30,000 tons of steel for the reconstruction of its burned area. It always takes time to rebuild, and the somewhat hysterical fears that the mills of this country, busy as they are now, could not cover the demand, are utterly unjustified. The quantity will not be large, relatively speaking, and the deliveries needed will be spread over so long a time that the work will make only a passing impression upon the structural mills. Those who believe that the Pacific coast disaster will mean a boom to the steel industry are as much mistaken as are those who hold that our own works cannot take care of the business as and when offered.

The event of the week has been the announcement just made by the United States Steel Corporation, the Lackawanna Steel Company and the Pennsylvania Steel Company that they have opened their books for orders for steel rails on the basis of $28 at mill. We are not advised whether the other rail mills will pursue the same course.

Officials of the United States Steel Corporation have authorized the following statement: The subsidiary companies of the United States Steel Corporation have been considering the question of prices for standard rails for 1907. The orders already booked are sufficient to keep the mills fully employed to the end of 1906 or later, and many of the railroad companies are desirous of placing orders for next year. The demand is so great that it has been suggested the price can be advanced, and there are some good reasons in favor of an increase. Although it is believed the rails which are now being produced by the rail makers generally of this country are the best in the world, both as to composition and method of manufacture, still it is felt the price of $28 per ton is a fair price under existing conditions, and that is the price fixed for 1907 by the companies above referred to.

The pig iron markets are in a somewhat puzzling condition, due partly to the fact that influences bearing upon them vary in different parts of the country and in different branches of the industry. Steel making irons are generally firm. In the Central West a sale of 20,000 tons of Bessemer has been made for an eastern works. In the Chicago district the malleable foundries are in the market to cover their contracts with the implement makers, the tonnage in sight being 20,000 tons. Car builders there, too, have been buying, and steel foundries are in the market for basic pig. In the east a leading interest is feeling the market for a large block of basic pig for the third quarter.

LONDON METAL MARKETS.

From Metal Market Report, April 25, 1906.

PIG IRON—Cleveland warrants are quoted at 50s. 4½d., and Glasgow standard warrants at 50s. 3d., making prices as compared with last week 2s. 1½d. higher for Cleveland warrants and 2s. 1d. higher for standard warrants.

TIN—Spot tin opened strong at £181 5s., futures at £179, and after sales of 250 tons of spot and 750 tons of futures closed strong at £181 15s. for spot, £179 for futures, making price compared with last week £4 10s. higher on spot, and £5 higher on futures.

COPPER—Spot copper opened strong at £85 5s., futures £83 15s., and after sales of 200 tons of spot and 900 tons of futures, closed strong at £85 10s. for spot, and £84 for futures, making price as compared with last week 10s. lower on spot and £2 lower on futures.

SPELTER—The market closed at £26 12s. 6d., making price as compared with last week 17s. 6d. higher.

LEAD—The market closed at £16, making price as compared with last week 1s. 3d. higher.

Nova Scotia Trade News.

Halifax, N.S., April 25, 1906.

Jobbers report the hardware trade excellent. The Spring orders coming in are very large, the sales being general. Small steamers and coasting vessels plying between ports on the coast and Halifax are carrying large cargoes, the buyers getting much lower freight rates than by rail. There has been a drop of 5c. in dry sheathing, it being now quoted at 35c. Tarred sheathing has also dropped 5c., it selling at 45c. There is a discount of 10c. to the trade on these prices. Lead shot has declined 5c. and it is now quoted at $1.56 per bag. Metals are steady. Sales of rope are heavy, pure Manila being quoted at 15c. and British at 11 1-2c. Oils and paints are finding a very ready sale. The price of the T. S. Simms & Co's brushes has been fixed by the trade at 66 2-3 per cent. off. There is a big sale for galvanized poultry netting, prices being as follows: 24 inches wide, 2-inch mesh, 19 gauge, per roll of 50 yards, $1.45; 30-inch, $1.65; 36-inch, $2.20; 48-inch, $2.95; 60-inch, $3.70; 72-inch, $4.40. Green wire netting is quoted at $1.55 per 100 square feet.

* * *

Excellent progress is being made on the construction work being done at the various points by the Dominion Coal Co. At Reserve Colliery work on the new emery seam is gradually showing up and this seam is rapidly becoming a factor in the general output from Reserve. The new shaft to the emery seam, which has an area of 24 x 28 feet, is down nearly 50 feet. There is still over 120 feet yet to be excavated before the shaft will be completed. The opening of this seam means much to Reserve, insuring, as it does, steady employment for hundreds of workmen for years to come. There are now about 100 men employed at the colliery and this number will be increased as the work advances. The average daily output of coal from Reserve now is about 300 tons. It is expected that within a few weeks the output at Reserve will be much greater than at present.

* * *

Messrs. Embree & Thompson, of Oxford, have closed their season's lumber business at Debert. Their cut amounts to 700,000 feet. C. O. Black, also of Oxford, has had a very successful year in the lumber business, and has had a cut of about four million feet.

The announcement is made that S. E. Thomas, colliery manager of the Cape Breton Coal, Iron & Railway Co., has resigned.

* * *

The city Board of Works Department has just opened tenders for supplies for the coming civic year. All the tenders are made on a schedule, and all the prices have to be made up in order to decide which is the most favorable. The tenders for hardware are always very close. The firms tendering this year are H. H. Fuller & Co., G. E. Smith & Co., and Stairs, Son & Morrow. Hillis & Son and Douglas & Co. have tendered for special castings. Stairs, Son & Morrow and the Acadia Powder Co. have tendered for explosives. The tenders for cement are from A. M. Bell & Co., Stairs, Son & Morrow, Hyde & Webster (Montreal), Eastern Portland Cement Co., Rhodes, Curry & Co., James Fraser, the Sydney Cement Co. and Brookfield Bros. The figures and the awarding of the tenders will not be made public until the council meets.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, April 26, 1906.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

FLUCTUATIONS—
White lead advanced 25c. per cwt.
Shot reduced 25c. per cwt.
Crowbars reduced ½c. per lb.

Spring trade continues very active and the market is without any features of special interest. Except for the trifling changes noted above prices continue as last week.

SCREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows:

Cold blast lanterns	$5 25	per doz.
Coppered cold blast lanterns	7 25	"
Cold blast dash "	7 75	"
Lift Lanterns	4 25	"

BLUESTONE—Selling well at $6.25 to $6.50 per cwt.

WIRE—Prices are steady. We quote:

Barbed wire, 100 lb					$2 90
Plain galvanized, 6 to 8	$3 39	9	$2 50		2 90
" " 10	3 50	12			3 10
" " 13	3 20	14			3 90
" " 15	4 45	16			4 60
Plain twist					3 00
Staples					3 50
Oiled annealed wire, 10	$2 96	11			$3 02
" " 12	3 10	13			3 20
" " 14	3 30	15			3 45

Annealed wires (unoiled) 10c. less.

HORSESHOES—Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

HORSENAILS—Revised list and discounts are now as follows:

	per lb.		per lb.
No. 10	$0 20	No. 6	$0 28
" 9	0 22	" 5	0 32
" 8	0 24	" 4	0 40
" 7	0 26		

Discounts are quoted as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅜ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

SCREWS—Discounts are as follows:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

NUTS AND BOLTS—Discounts are unchanged and continue as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

RIVETS—Quoted now as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	34½
" No. 12	40

COIL CHAIN—Unchanged in price. We quote:

Coil chain—

3-16 inch	$5 25	¼ inch	$7 20
5-16 inch	5 20	⅜ inch	4 60
7-16 inch	4 45	½ inch	4 30
⅝ inch	4 10	¾ inch	4 00

SHOVELS—Discounts on spades and shovels continue 40 and 5 per cent.

HARVEST TOOLS—Discounts are now 60 and 5 per cent.

AXE HANDLES—Quoted as follows:

Axe handles, turned, s.g. hickory, doz			$3 15
No. 1	1 90	No. 2	1 60
Octagon extra.	2 30	No. 1	1 60

AXES—Prices quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz	9.00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

BUTTS—The discount on wrought iron butts is 70 per cent.

CHURNS—The discounts from list prices are 45 and 5 per cent.

CHISELS—Quoted at 70 per cent. off list prices.

AUGER BITS—The list on "Irwin" auger bits has been changed and it is now the same as the list on common auger bits. There has been no change in the discount. Discount, 70 per cent.

BLOCKS—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

FITTINGS—Discounts continue as follows:

Wrought couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	55 p.c.

GRINDSTONES—The price is now 1 3-4c. per lb.

FORK HANDLES—The discount is 40 per cent. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 per cent. off list prices.

HOOKS—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " per doz	1.70

STOVE PIPES—The price has declined and quotations are now as follows:

6-inch, per 100 feet length	8 50
7-inch, " "	9 25

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 per cent.

WASHERS—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

WRINGERS—As noted last week the price has been advanced $3 per dozen. We quote:

Royal Canadian, per doz	$33.00
R. B., per doz	37.75

FILES—Discounts are quoted as follows:

"Arcade"	75 p.c.
"Black Diamond"	60 p.c.
"Nicholson's"	62½ p.c.

BUILDING PAPER—Prices are as follows:

Plain.		Tarred.	
Joliette	40c.	Joliette	65c.
Cyclone	55c.	Cyclone	80c.
Anchor	55c.	Anchor	65c.
Pure fibre	60c.	Pure fibre	80c.

TINWARE, ETC.—Quoted as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, Famous	50 p.c.
" Imperial	50 and 10 p.c.
" " (one coat)	60 p.c.
" Premier	50 p.c.
" Colonial	50 and 10 p.c.
" Royal	60 p.c.
" Victoria	45 p.c.
" White	45 p.c.
" Diamond	50 p.c.
" Granite	60 p.c.

CORDAGE—Quotations are as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25
Cotton rope, per lb	00 21

SOLDER—Quotations now at 24c. per lb. with concessions for large quantities.

VISES—Prices are quoted as follows:

"Peter Wright," 30 to 34	14½c. per lb.
" " 35 to 39	14c. "
" " 40 and larger	13½c. "

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—Shot has been reduced 25c. per cwt. Quotations are as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	20 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Dominion Eley's and Kynoch's soft, 12 gauge.	
black	16 50
chilled, 12 gauge	17 50
soft, 10 gauge	19 50
chilled, 10 gauge	20 50
Shot, Ordinary, per 100 lb	7 00
Chilled	7 50
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

MUNRO WIRE WORKS, Limited
NEW GLASGOW, N.S., AND WINNIPEG, MAN.

PAINT SPECIALTIES

Are money makers and should not be overlooked when stocking up. We carry a large assortment in neat and attractive tins.

SAMPLES AND PRICES ON APPLICATION

THE WINNIPEG PAINT AND GLASS CO., LIMITED
Warehouses—CALGARY, EDMONTON *WINNIPEG*

We Manufacture in Winnipeg:

Metal Shingles, Sidings and Ceilings, Corrugated and Plain Round Conductor and Eavetroughs in 10 ft. lengths, Metal Windows, Cornices, Skylights.

WINNIPEG CEILING & ROOFING CO., - - Foot Scott St., Fort Rouge
TELEPHONE 2845

PILKINGTON BROS., LIMITED
(WORKS: ST. HELENS, ENGLAND)

BRITISH PLATE AND WINDOW GLASS

ALSO

Wired Rolled — Wired Polished Plate — Prismatic Glass
Figured, Rolled and Cathedral — Rolled Glass
Muffled, Obscured and Enamelled Glass — Plain and Bevelled Mirrors, etc.

Prices on application. FULL STOCK IN OUR WINNIPEG WAREHOUSE.
OFFICE AND WAREHOUSE: 157 MARKET ST., - - - **WINNIPEG, MAN.**
P.O. Box 164. Telephone 3271.
Also Montreal, Toronto and Vancouver

IRONSIDE FOR IRON

OUR SPECIALTIES ARE BRITISH AND FOREIGN **IRON, STEEL, METALS, BARS, PLATES, SHEETS, BOLTS and NUTS, TIN PLATES, Etc.**

Sole Licensees for **PAGE'S PATENT WIRE STRETCHER,** and we are willing to sell the right of manufacture in Canada on a Royalty basis.

IRONSIDE'S PATENT WIRE CUTTERS, guaranteed to cut any wire

We publish a "Canadian Metal Price List" monthly. Quotations in Dollars and Cents. (C.I.F.) We will send this, and our "Weekly Market Report" on receipt of address.

IRONSIDE SON & DYCKERHOFF 16 Water Lane Gt. Tower St., E.C. **LONDON, ENG.**

Sole Agent for Canada: MR. SYDNEY HACKETT, 233 St. James St. Montreal.

Glaziers' Sundries!

Send us your orders when in a hurry and mark **"RUSH"!** for any of the following:

Putty in bladders
Putty in bulk
Glaziers' Diamonds
Red Devil Glass Cutters
Glaziers' Rules
Cutting Boards
Glaziers' Points
Point Driving Machines
Putty Knives, all styles

Complete stock for immediate shipment from either Winnipeg or Calgary. All orders shipped same day as received.

G. F. STEPHENS & CO. LIMITED
PAINT AND COLOR MAKERS
WINNIPEG and CALGARY

IRON AND STEEL—We quote:

Bar iron (basis)	2 70
Swedish iron (basis)	4 75
Sleigh shoe steel	2 75
Spring steel	3 25
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

SHEET ZINC—The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The price is steady at the recent advance to $5.00 per cwt. for small lots with a reduction of 25c. per cwt. on ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are:

Black, ¼ inch	2 45	Black 1 inch	5 75
" ⅜ "	2 85	" 1¼ "	7 85
" ½ "	3 15	" 1½ "	9 40
" ¾ "	4 00	" 2 "	12 90

GALVANIZED IRON — Quotations are:

Apollo, 16 gauge	3 90
18 and 20 gauge	4 10
22 and 24 gauge	4 45
26 gauge	4 40
28 gauge	4 65
30 gauge or 10¾ oz	4 95
Queen's Head, 24 gauge	4 65
26 gauge	4 65
28 "	4 90

TIN PLATES—We now quote as follows:

Tinplate, IC charcoal,	20 x 28, box		9 50
" IX	"		11 50
" XXI	"		13 50

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote:

Canada plate, 18 x 21, 18 x 24	3 15
Canada plate, 20 x 28	3 40
Canada plate, full polished	3 90

BLACK SHEETS—Prices are:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

PETROLEUM AND GASOLINE—Prices are steady. We quote:

Silver Star, per gal	21½c.
Sunlight "	22½c.
Eocene "	24½c.
Pennoline "	25½c.
Crystal Spray "	24½c.
Silver Light	22½c.
Gasoline, 70-72 (Engine)	25½c.

(In barrels f.o.b. Winnipeg.)

PAINTS, OILS AND TURPENTINE—White lead has been advanced 25 cents per cwt. Quotations are now as follows:

White lead (pure)	$6 75
Bladder putty, in bbls	0 02½
" " in kegs	0 02¾
Turpentine, pure, in barrels	1 07
Less than barrel lots	1 12
Linseed oil, raw	0 66
Boiled	0 69

81 to 85 "	12.60
86 to 90 "	14.75
16 to 95 "	17.30
90 to 100 "	

New Brunswick Trade News

St. John, April 22.

Little worthy of remark has occurred in provincial hardware circles of late. One can still record firm prices and speak of probable further advances; one can tell of fair trade conditions; with that there is little else to which to refer. In St. John attention was centred last week on the civic elections. As a result of these elections one member of the ranks of hardwaremen, Mr. A. M. Rowan, sits at the board of aldermen for the first time. Ald. Lewis, of Lewis & Son, machinists, and Ald. McGoldrich, the well known metal dealer, were re-elected. Ald. McGoldrich was unopposed while Ald. Lewis won out after quite a strenuous fight. Ald. Sproul, a prominent contractor and builder, also came out of the contest with triumphant colors. One of his opponents, Mr. R. J. Green, is also a contractor. In several of the wards the contests were exciting; in others they were very tame. It may be noted that in some quarters one of our local manufacturing concerns was credited with exerting strong influence on behalf of a certain candidate, who, by the way, was successful in his race for civic honors.

Apparently it will soon cost more than at present to have one's laundry work done, for wringers are climbing higher in the price scale. In the majority of cases the advance to date has been about $3 per dozen. In one case, or perhaps two cases, however, the increase has been quite a bit more than the figure just given. Advancing wages, advancing cost of rubber, are named as the two chief causes of the raising of the prices.

Black sheet iron is a commodity that seems to be billed for another jump skyward. In February last the price asked for this article was advanced. Since then the quotations have been steady. Now, however, there is a feeling that another advance will be made shortly.

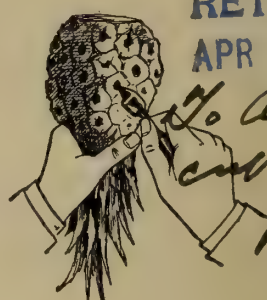
White lead is standing firm in price. In the near future quotations will probably go up again. One reason for this probability is the continued scarceness of the white lead. Activity in building operations must inevitably send the price up.

Shelf hardware is showing a bit firmer. It has already been advanced somewhat in price.

Cordage prices are firm. The demand is active.

Pig lead continues firm. Cement is firm. Tin plate prices have evidently not reached their top notch yet.

G. F. Hawkhurst, the north end carriage repairer, has, it is understood, left for the west. At all events creditors are seeking to learn of his whereabouts.



A. B. Petrie, of Hamilton, was recently in St. John. His son, T. S. Petrie, is provincial manager for the Petrie Manufacturing Company. The company is doing a large business through the country.

J. H. Russell, well known as the inventor of the Russell snow plow, died here on Saturday last.

YAWMAN PINEAPPLE EYER.

The Yawman & Knapp Mfg. Company, Rochester, N.Y., represented by the Bridgeport Wire Goods Company, 82 West Broadway, New York, is introducing the Yawman pineapple eyer, shown in the accompanying illustration. It is designed for quickly and effectively removing the eyes from a peeled pineapple, without unnecessarily wasting the pulp. It is made of hardened steel, polished and nickeled and fitted with a white birch wood handle. The two cutting edges can be kept sharp by touching them up occasionally with a file or whetstone. The shape of the cutting member is such that only a certain amount of the fruit can be dug out, so that skill is not a factor in the operation. The eyers retail at 25 cents each and are attractively displayed on an easel card containing one dozen for exhibit in the store.

PROMPT SHIPMENT OF GOODS.

Hibbard, Spencer, Bartlett & Co., Chicago, in November made a record shipment of an order for a complete stock. One of the company's salesmen brought a customer from the Northwest, whose store and stock had previously been destroyed by fire, to the Chicago store. A stock order of 70 pages was sold, requiring constant work for a period of two days. The order was filled and packed while the salesman was selling it. As soon as a certain line of goods was decided upon the order was taken to the packing and shipping department, where the goods were immediately prepared for shipment. The customer finished buying at 12 o'clock noon Thursday, November 23, and the bill was shipped on the company's lighter at 3.50 that afternoon, and loaded in a car and sealed at 4.45 the same day. This order was therefore sold, filled, packed and shipped in 48 hours. There were only three items short on the entire bill and the book was in the pricer's hands before the customer left the store. The goods were sold for shipment to Minnesota at a point about 450 miles from Chicago, and arrangements were made with the Chicago & Northwestern Railroad to forward the same as speedily as possible. The car arrived at its destination early than 60 hours from the time of sealing. Sunday morning, November 26, less than 60 hours from the time of sealing.

PROGRESSIVE RETAILING

HOW TO CONDUCT A BARGAIN DEPARTMENT.

(By E. J. Hale.)

If a bargain department is worth instituting at all, it is worth instituting right. Then it is necessary for you to give it enough of your time and personal attention to keep it going right. I assume, if you should open up a bargain department, it is primarily to help your business in general, and that direct profit is to be incidental rather than primary.

Have it well Placed.

And the first thing necessary for you in the institution of a bargain department is its location. By having it properly placed in your store, you score one of the points that assures success.

The very best place for it is down through the centre of your store where all who enter may see it, and be coaxed from a shopping into a buying mood. What is use of offering real bargains unless you put them where they can be seen by the largest possible crowd.

Your bargain department should and will always draw people to your store simply to see what you have on sale for the day. Put the bargains out where customers can see them and they will buy in other lines.

No Expensive Fixtures.

The fixtures for your bargain department need not be expensive, although I would advise you to have them as substantial and attractive as your own better judgment and ability dictates. You can make these fixtures yourself, and all that will be required will be some single, some double and some triple tables. You can even use goods boxes to good advantage. And where they are used, it would be well enough to procure some nice and attractive wall paper and paper them. Your customers then will never know the difference, and if they do, what does that matter?

First Loss the Best.

The main object of a bargain department is to close out "stale" goods. However, in offering these stale or shelf-worn goods, you should mix in some bright, catchy and up-to-date goods, also, in order to make a nice showing. You can hardly expect to get regular prices for these "stickers." Better sell them at some price and put the money back in other goods which you can turn over, and on which you can make a profit.

A bargain department provides an easy avenue of escape for broken lots and slow sellers from all over the store, provided you keep the counter spiced up with a few good, cracking values at all times, so that people will always look there with the expectation of finding real bargains. Of course, commonplace goods offered in a commonplace way will not do the work.

Keep it Alive.

Whatever you do, don't let your bargain department get stale. Always show something new. Shift your goods frequently. This week have glassware in the front and next week in the rear. Change the show cards. Give things a "different" look. Accustom people, your people, to expect something new and good every time they pass by your bargain counter. If you don't, it will soon get like any other department in your house—to be visited only when particular goods are needed.

The purpose of your bargain department is to interest people—to remind them of things they need—to get them started in buying—to sell them something that is a real bargain so that it will bring them back to your store when they need anything in your line.

MARK TWAIN'S SERVANT.

Mark Twain has just lost a servant who has been in his employ since the day of his marriage; and, while attending his funeral, the philosopher-humorist uttered a tribute to the dead man which could not have been higher. "In all the time he was with Mrs. Clemens and myself he never ran out. I have had other servants who would say, 'Mr. Clemens, I forgot, and there isn't a cigar in the house,' but that never happened with Patrick McAleer, for he never forgot anything, and I never had to give him an order."

Think of that! "I never had to give him an order." What would the average employer give for a man like that? There are lots of men who can do a thing after they are told with exactness what they are wanted to do. But the man who can divine what is wanted and have it done and ready before the need is felt—that man is beyond price!

It is no wonder that Mark Twain said that "his life ought to rank with that of great soldiers, statesmen and chief justices, for they were no more proficient in their professions than he was in his." "He was with me last summer in Dublin, N.H.," Mr. Clemens proceeded. "I did not give him an order during the summer; and he did not need one."

Of course, one man must learn a great deal about another man's mind before he can fit into it like that; but how many men can learn this lesson in a million years? Ah! but, you say, every man does not want to be a servant. Doesn't he? What man is not a servant in his need to please other people? The successful departmental store king—isn't he a servant? Must he not know what his customers want and get it for them before they ask for it, if he is to succeed? Must he not serve the public through the whole summer and the whole winter "without an order?". The merchant who waits to do things until he is "ordered," is soon ordered off the premises.

It is this ability to catch in advance the mind of another which makes the invaluable servant, the successful merchant, the great politician. An employer who can find such a man has added immensely to his own productiveness; for when he must explain in detail everything he wants done, he almost might as well do it himself. Mark Twain did not put the value of his old servant too high. He was fit to "rank with statesmen and chief justices." His epitaph might well be—"He never ran out."—Montreal Star.

"Eastlake" shingles

"Eastlake" Metallic Shingles are veritable trade bringers to the dealer in Sheet Metal specialties. Their economic advantages over wood or cheap metal shingles are so evident to every buyer that the comment and discussion of their merits bring other customers and more trade.

They have no raw, ungalvanized edges and when put on with the patent "Eastlake" cleat, make a neater job on any roof than is possible with other makes.

Wind, rain and fireproof, "Eastlake" Steel Shingles make the most useful and durable roofing for any building.

OUR NEW $10,000 CATALOGUE

We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing.
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

435. Eggs, butter, etc.—A commission agent in Birmingham wishes to hear from exporters of eggs, butter, cheese, bacon and hams.

436. Hammer handles—A Birmingham firm is in a position to take large quantities of hammer handles.

438. Spade eye handles—A Birmingham firm wishes to get in touch with a shipper of spade eye handles.

439. Hydraulic pumps—A large firm in Reading wish to appoint an agent for the sale of their hydraulic pumps.

444. Brass handles, etc.—A Birmingham firm wishes to appoint an agent in Canada for the sale of brass handles, knockers, letter plates, builders' goods in brass and iron. Also cabinet fittings.

446. Scales—A Birmingham firm wishes to appoint an agent in Canada for the sale of their scales.

450. Blow lamps—A Birmingham firm wishes to place their blow lamps or burning-off torches in Canada.

451. Fire clay—A London firm wishes to place on the Canadian market their fire clay.

452. Japanned goods—A Stourbridge firm would appoint an agent in Canada for the sale of their japanned goods.

458. Gun-metal steam cocks, etc.—A Yorkshire engineering firm, manufacturers of gun-metal steam cocks, and valves, injectors, steam and water gauges, baths, lavatories and closets, fire-clay sinks, electric fittings, lamps, bells and cables, desire to extend their business in Canada, and invite correspondence from parties interested.

481. Garden implements—A Manchester dealer requires catalogues and prices from Canadian manufacturers of garden implements.

483. Wash-boards—A Manchester firm asks for prices of wash-boards from Canadian manufacturers of same.

486. Machine tools—A Manchester firm wishes to extend its trade to Canada, and will be glad to furnish prices and specifications of machine tools to Canadian importers.

487. Stained glass—A Manchester firm wishes to correspond with Canadian importers of stained glass for house, church and public buildings.

495. Cotton-seed and linseed oil—An East Coast seed crushing firm desire to get in touch with Canadian importers of cotton-seed and linseed oil and invites correspondence from Canadian buyers.

499. Paints, varnishes, etc.—An East Coast manufacturer of all classes of paints, varnishes, etc., invites correspondence and negotiations with Canadian buyers.

500. Seed, cylinder and engine oils—A large firm manufacturing all classes of seed, cylinder and engine oils, desire to open up connections in Canada with firms interested in these goods.

501. Linseed and cotton-seed oils—An East Coast oil exporter desires to place linseed and cotton-seed oils on the Canadian market, and invites correspondence.

503. —Linseed oils—A Hull firm of oil exporters invite correspondence as to all classes of linseed oils.

FOUNDRY AND METAL INDUSTRIES

The Galt Malleable Iron Works are putting in a plant which will employ 100 hands.

The British Columbia Copper Co. have started to expend $300,000 on their smelter, machinery and equipment.

James J. Hill has ordered 20,000 tons of steel rails from the Soo Company and 3,200 from the Dominion Steel Company.

H. J. E. Wilcox has found a large body of silica sand on his farm near Niagara Falls. This sand is used in foundries.

James T. Thompson, of Helena, claims to have discovered platinum on the Pacific coast in British Columbia, in good quantities.

The Dominion Copper Co. will put in a third blast furnace at Boundary Falls, B.C., which will bring the daily output up to 1,200 tons of ore.

Russell and Dougherty, two American capitalists, have been in Brantford planning to establish a factory there to manufacture metallic packing.

The Weed Chain Tire Grip Co., of New York, who manufacture a chain tire grip for automobiles, have established a branch factory at Bridgeburg, Ont.

Fort William will vote on a by-law to grant tax exemption to the Canada Iron & Foundry Co., of Montreal, who will build a branch there costing $125,000, and employing 300 men.

The Amherst Foundry Company will increase its capitalization to $450,000, and will make extensive additions to their plant at Amherst, N.S. A branch has been opened in Winnipeg.

A. E. Knapp, representing Seattle capitalists, has taken an option on copper lands on the Queen Charlotte Islands, B.C. Reports say that these properties are rich in copper ore.

It is expected that the Atikokan iron mines will be ready to ship ore by the 1st of August, by which time the contract with the Canadian Northern comes into force, to ship 600 tons of ore daily.

The Schwab interests, of Pittsburg, have purchased $500,000 worth of iron ore from the Mineral Range Iron Mining Co. The ore will be taken by rail to Port Hope and ferried across the lake from there.

UNITED STATES STEEL AND CANADA.

Despatches from New York and other places have been seen in Montreal which testify to the fact that some effort has been made—is being made—to sell the control of the Dominion Steel Co. to the United States Steel Corporation. Perhaps a confirmation of this may be forthcoming after the meeting of the directors of the American company, which was held in New York on April 24. Just prior to the annual meeting of the big American concern, which was held in Hoboken, N.J., on April 16, and just after it, too, there were meetings held in New York by interested parties, and that James J. Hill is no stranger to these negotiations is well known on the "inside." Then the fact stands out that the promoters of the sale are already in control of about 100,000 shares of the Dominion Steel common, and the addition of another 25,000 shares will make the deal feasible either as a merger or as a control. It is said by knowing ones in Montreal that this quantity of shares will be available in the open market when the time is ripe for the New York magnates to say the word "proceed."

NEW ONTARIO COAL.

The announcement made by Hon. Frank Cochrane that anthracite coal had been found in Northern Ontario is of great importance to the province, as the industrial importance of coal to the country cannot be over-estimated. At present Canada's coal supply lies in the extreme east and the extreme west, hence the discovery of coal in Ontario, and hard coal at that, is a thing that means a lot for Central Canada. Until further evidence is produced, however, this discovery should not be too quickly taken for granted, for the same reports were circulated some few years ago, when hard coal was supposed to be found at Sudbury. A company was floated to develop these mines, but it was found that their find consisted simply of a material called anthraxolite, which is not at all valuable as a fuel.

OIL AS A FORGE FUEL.

The blacksmith shop in the navy yard at Norfolk, Va., according to a correspondent of the American Machinist, is run strictly with hydrocarbon gas and fuel oil, not a pound of coal being used. For the past three years gas has been used as fuel in all the blacksmith shops, forges and furnaces. The gas is made by an Acme gas plant from 68 to 70 B. gasoline, and the shop is most pleasing to the eye, being entirely free from smoke and dirt. The gas plant is considered the most successful of its kind in operation and it has run continuously without a hitch since it was started in August, 1902, excepting two days when it was stopped on account of the blowing out of the safety flange.

They have at present in operation fuel and crude oil furnaces and forges as follows: Angle-iron heating furnaces, core ovens, brass smelting furnaces, drop forging furnaces, bolt and rivet furnaces, large forging furnaces up to eight tons, and have recently installed some Mircs blacksmith forges, which are considered much better than the gas forges, as they are cheaper in the consumption of fuel and are adapted to all classes of smith work, such as angle iron, eye bands, shackles, chain work and forging work.

Some very difficult jobs of welding have demonstrated that the welding heats made by this oil forge are better to work up than that of the gas forge, as the oil heat seems to penetrate the metal throughout.

The blacksmith forge to use fuel oil has up to this time been in the experimental stage, but the Mircs oil forge seems to meet the demand. I mention this forge for the reason that I do not think there is another oil blacksmith's forge in use to-day, where the smith can move the loose bricks on top of the forge to suit the material to be heated. To see the forge in operation one would think it a gas forge, as combustion is absolutely complete.

PAINT, OIL AND BRUSH TRADES

THE TURPENTINE OUTLOOK.

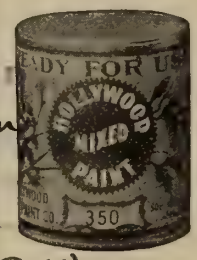
The correspondent of E. Fielding, Toronto, at Savannah, Georgia, writes : "I have just returned from a trip through the turpentine belt, and as receipts everywhere are so insignificant, have changed my views somewhat about turpentine. The demand in the west seems to be very large, and as some of the companies are unable to secure supplies in the Gulf States, as has been their custom heretofore at this season of the year, they are largely buying on this market, and this condition will probably exist for two or three weeks yet to come. All indications point to a short crop of rosin and turpentine, which naturally means that the prices this season will continue high."

Another report says : There is no change in the tenor of the reports received directly from the producers and from other sources as to crop. It is apparent that the producers cannot make the crop of turpentine they laid out to make. The backwardness of Spring and the inadequate supply of labor have united to hold down production to this time and the labor trouble is regarded as more likely to become aggravated later on. All of the May-August turpentine futures offering on the market have been taken by a large exporting house, which would seem to give a strong basis for those months, indicating the strength of the opinions entertained as to the future of the article. Additional sales will probably be made if producers show any willingness to sell in advance for some months.

PAINT DISCOLORATION.

The discoloration of white painted surfaces is a question that sometimes engages the attention of paint manufacturers. As a rule, the presence of impure air or of chemical fumes is set down as the cause of the discoloration, which may be merely a slight yellowing or a distinct blackening. Experiments have shown, however, that such external conditions have little to do with the phenomena, and that the composition of the pigment is not always at the root of the matter, since paints made with white lead, sulphate of lead, and oxide of zinc are all equally liable to change color under certain conditions. The dominating cause appears to be rise in temperature. Certain samples of linseed oil and certain oil varnishes are particularly prone to turn yellow, light brown or dark brown after drying; and exposure of a white painted surface to direct heat is very liable to produce this effect in a degree varying with the degree of heating and the precise nature of the paint. Familiar illustrations are found in the yellowing of white paint over a gas jet or lamp even when zinc paints are used. Similarly, enamel makers and users know how difficult it is to store white or light-colored enamel without its "turning color."

SANITARY EFFECT OF PAINTS.



A study has recently been carried on in France to discover what effect, if any, wall paint has on bacteria, with the result that the tendency of wall paints was distinctly detrimental to the life of all bacteria. The colors of enamelled porcelain were found to be more sanitary than oil colors, particularly with regard to tuberculosis bacillus.

RUBBER IN PAINTS.

The use of India rubber in paints that are exposed to extreme changes of temperature or that require more of a protective character against dampness is increasing in use by those who manufacture these specialties. In Great Britain paints are often specified by engineers because of the rubber they contain. Para rubber is easily dissolved under suitable conditions in linseed oil which renders the paint peculiarly suitable to surfaces that require an elasticity, or protection. It is stated that the rubber does not really dissolve, but rather becomes extended throughout all the body of the oil, but at any rate the result of introducing rubber into paint has been found a success in the prevention of cracking and in resisting dampness.

THE DRYING OF PAINT.

The excessive use of driers in paint causes it to appear hardened when often it is only surface dry. There is a difference between hardening and drying in paint, although the terms are often considered synonymous. A paint may be sufficiently dry to allow the application of another coat when it is not by any means hardened. When paint is forced by the undue use of driers, and the second or third coat is applied too soon, the result is generally shown in cracking, blistering and peeling off. In the case of oily coats they cannot be hard under forty-eight hours even if they appear to be dry, and in some cases they are not fit to re-coat until a considerably longer time.

A GOOD REPUTATION

When your customers realize that you sell the best paint, they will naturally return for the best of something else. Hollywood Paste, Ready Mixed and Floor Paints are the paints that convince your customers you use good judgment in the selection of your stock and that your aim is for best quality in all things.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 28, 1906.

Linseed oil is interesting this week, as the advance is determined and is likely to be maintained at from 57 to 60c.

The latest reports from the south point to an advance in turpentine, and hence the small decline of two weeks ago is not interfering with the markets at all.

Paris green is again a feature. Owing to the scarcity of arsenic the manufacturers have been hampered considerably, so that there is every probability of Paris green being scarce before the potato crop is harvested. Just now the first demand for the article is noticeable, as it is supposed to be for use in spraying fruit trees, and we are unable to quote prices, as the trade is referred in each case to the manufacturers direct. Dealers will profit by doing this, as some big manufacturers are in a position to offer terms owing to their foresight in the arsenic buying. Arsenic, which was selling last Fall at 3¼c., is now nearly double the price, hence it is self evident that Paris green may be dearer. This shortage of arsenic is said to have been caused by the mine flooding in France and England.

Manufacturers of paints and other kindred supplies have been compelled to tax their capacity to the utmost this week, owing to the fine warm weather prompting many peremptory orders from the country towns and districts. Building has been active all the mild Winter, and now many structures are ready for the decorators, and supplies are needed quickly. Steamers are now getting ready for their regular routes and activity dominates everywhere.

The advance in shellac varnish has been maintained, and is likely to continue.

LINSEED OIL—We quote: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 56c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 59c. to 60c.

TURPENTINE — We quote: Single barrel, 98c. per gallon; two barrels or over, 97c.; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

GROUND WHITE LEAD — We give prices as follows: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC — We quote as follows: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5½c. to 6½c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7½c.; 100-lb. kegs, 7½c; smaller quantities, 8½c.

RED LEAD—Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95 pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is firm at following prices: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM—We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—New prices have not yet been issued and meanwhile quotations can only be obtained from the manufacturers direct.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS—No change in the market has occurred, and is not likely until new supplies arrive by ocean steamers due in about ten days. Trade is active and prospects are bright for its continuance. Meanwhile, we are quoting the following: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24; and twelfth do., $28.50.

Welland council will submit a by-law to purchase a site worth $4,000 and give tax exemption to a machine tool factory to be established there.

FOR YOU WE BLOW

The perpetuation of success is accomplished only through merit—

Ark Brand Floor Paint

is made to meet all the demands of wear and service: It dries hard over night and remains hard—with the elasticity of rubber. Owing to its composition it possesses the nature of concrete. Tests have proven it to be superior to any floor preparation made. It is the best there is in honest paint-making. We invite comparison with any other brand. ***Send us a trial order.***

THE DANA MFG. CO.,
10 Warren Street, NEW YORK. CINCINNATI

Results count in the business world and figures are unanswerable. Our Liquid Paint business which has doubled in a very short time proves that the CANADA PAINT COMPANY'S PAINT is the PAINT of the masses as well as the classes. Keats says, "A thing of beauty is a joy forever." A Paint of beauty is the houseowner's delight and the housekeeper's joy.

Floors stained with the CANADA PAINT COMPANY'S HANDY VARNISH STAINS are sweet and hygienic. Woodwork and walls painted with the CANADA PAINT COMPANY'S READY MIXED PAINTS are wholesome in the highest degree. Verandahs and steps treated to a coat of the CANADA PAINT COMPANY'S FLOOR PAINT lend distinction to the domicile and stamp the house as being in the front rank.

THE CANADA PAINT COMPANY'S OXIDIZED ART ENAMELS are suitable for every class of ornamental work. Color cards upon request.

The ALUMINUM PAINT made by THE CANADA PAINT COMPANY applied upon radiators and all metal work, stands out Clear and Silvery with telling effect.

To improve Carriages and Vehicles ask for the CANADA PAINT COMPANY'S LIQUID COACH COLORS or BUGGY PAINT.

The manufacturers of this company appeal to a discriminating class of purchasers and we respectfully urge our friends to give prominence to the C. P. CO'S. Color Cards. They are our silent salesmen and by their aid and the co-operation of our Customers, we introduce the CANADA PAINT COMPANY'S COLORS everywhere.

We are not conceited enough to say "our Paints, Stains, and Varnishes are so good that they will sell themselves." Without the aid of our mailing advertising system, the storekeeper would undoubtedly dispose of a certain amount. We enable him by this liberal advertising to sell double and treble that quantity. Hence the more we sell the better for all parties and today the CANADA PAINT COMPANY'S manufactures are popular everywhere.

THE PAINT OF THE PEOPLE.

There is no paint manufactured that is so universally commended by expert and amateur painters as that made by THE CANADA PAINT COMPANY. Its superiority has led to a host of imitations.

Remember, "ONE COAT OF PAINT IN TIME SAVES NINE."

Do not delay in ordering from

The CANADA PAINT Company

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, April 27, 1906.

Turpentine continues to maintain its price and reports from the south this week indicate that there is little likelihood of any further drop. The backward Spring has lessened the run considerably and in addition to this conditions are such that enough negro labor cannot be had to gather the crop. It would seem from these reports that the prevailing prices are about what might be expected for some time.

Linseed oil has been slightly weaker in England, but on this side no movement has been experienced.

Crude petroleum remains the same in Canada, although the American market is strong at the increase noted in our last.

There is yet no visible sign of any cheapening of paris green. The same scarcity of arsenic prevails and so far as can be now seen will probably remain so for some time.

WHITE LEAD—Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 560 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50, ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c., in 100 lbs., 7 1-2c.; No. 1, in casks, 6c., in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c., in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1.00 per 100 lbs.

WHITING—60c. to 65c. per 100 lbs., Gilders' whiting, 75c.

PARIS GREEN—Prices have been withdrawn owing to recent advances.

SHELLAC VARNISH—Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.; boiled, 1 to 4 barrels, 61c.; 5 to 9 barrels, 60c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrel lots, 96c. to $1 f.o.b. point of shipment, net 30 days. For less quantities than barrels, $1.05 per gallon will be charged.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c. per lb.; No. 1 American white, 15c. per lb.

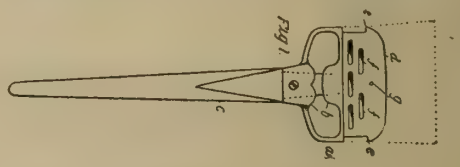
PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2.00 to $2.10; bulk in 800-lb. casks, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.00.

CASTOR OIL—English, in cases, 8 1-2c. to 9c. per lb., and 10c. for single tins.



REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM—Prices continue unchanged. We quote: Canadian $1.36; Pennsylvania, $1.61; Ohio, 94c.

IMPROVEMENT IN BRUSH CONSTRUCTION.

W. F. Brundell, Norwich, England, describes a recent invention of his as follows:

This invention for an improvement in the construction of paint, varnish, distemper, whitewash, and other brushes, consists in stamping, molding or casting the heads of brush handles so that the heads can be conveniently and economically made to the best and most

An Improvement in Brushes.

suitable shape for holding the bristles, and shall not be liable to shrinkage, so that the bristles will always be held firmly on the handle. The handle may be in one with the head, or be a wooden handle fixed in the head. In carrying out this invention, the head of the handle is made of metal, vulcanite, or other suitable material not liable to shrinkage that can be readily fashioned in the manner aforesaid. The accompanying illustration shows a handle consisting of an aluminum head (a) molded with sockets (b) for receiving a wooden stem (c), the part (d) of the head for receiving the bristles being indented on its sides and provided with shoulder (e) for holding the bristles in place. The indentations (f) which serve as a hold for the resin used for cementing the bristles to the head, may be replaced by perforations, passing through the head The bristles are bound tightly on the head (d) by a wire which is attached at the perforation (g) and wound round the bristles in the usual manner.

A mixture of two-thirds pine tar and one-third linseed oil is a good coating, or rather preservative, for wire ropes running underground or in water. It is not strictly necessary to boil the tar, though preferable. This is the mixture used by most cable roads.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

New Enamelware Catalogue.

A very fine catalogue of "Beaver Brand" cast iron porcelain enameled ware has been issued by the Amherst Foundry Company, Amherst, N.S., there being about 30 pages 9x11 inches, well illustrated with engravings of baths, lavatories, sinks, drain boards, sink backs, range closets, urinals, etc. About a dozen new plates are shown and several additional new patterns are to be ready shortly. Reading matter descriptive of the process of manufacture of enameled ware and of the different features of each fixture made is given, making the book well worth sending for. The plumbing trade throughout Canada can secure copies of the catalogue on request. O. A. Vickery, 180 Victoria street, is the Toronto representative of the company.

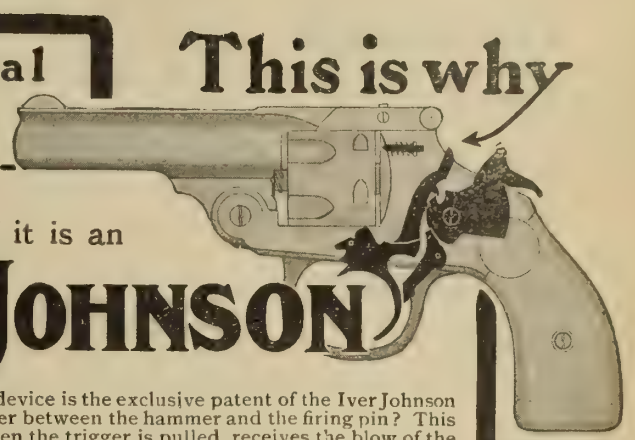
A Wrong Address.

In the paragraph published last week referring to the catalogue issued by the Morgan Spring Company, Worcester, Mass., the address of their Canadian representative was wrongly given as Toronto when it should have been Montreal. Catalogues can be had by addressing James A. Henderson, Montreal.

Canvas Gloves.

The Regal Glove & Mitt Co., London, Ont., manufacture a complete range of canvas and leather-faced and leather-tipped gloves, samples and prices of which may be had on application.

1906 Blue Book.



Caverhill, Learmont & Co., of Montreal and Winnipeg, are now distributing

their 1906 Blue Book on Arms and Ammunition to hardware dealers. This book shows many new lines of guns and a full line of rifles, while cartridges, revolvers, sporting goods, skates, etc., make up the balance of the book. Hardware dealers who may not have received one should write for a copy.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Pipe Dreams.

The Page-Hersey Co., Guelph, offer a briar smoking pipe to any one sending them 25 tin tags that have been received with their iron pipe. One tag accompanies each bundle shipped by them, so save them up and get a pipe, you smokers.

Screen Wire Rockoner.

The B. Greening Wire Co., Hamilton, are sending out a table showing the number of square feet contained in any length of wire netting from three inches up to a hundred feet, in all the various widths made by them. This will be of great value to dealers, who may have one sent upon application.

Dean's Steam Pumps.

Dean Bros., steam pump makers, of Indianapolis, Indiana, are making what they term the Atlantic type pumps. These pumps were specially constructed for hard and continual service in long ocean trips, and the same type with some modifications has been made by this company for power plants. A card will bring this catalogue to dealers.

Fabien Refrigerators.

Twenty-four different classes and sizes of refrigerators are made by C. P. Fabien, at 3167—3171 Notre Dame street, Montreal, and fully illustrated in their catalogue. Dealers who have not yet received their catalogue would profit by sending for one, as there is a large range for selection.

Ice Cream Freezers.

North Bros. Manufacturing Co., of Philadelphia, Pa., have out a new 1906 booklet on their ice cream freezers which shows the newest thing in this line. All sizes are shown from the large power machine down to the family freezer. They will be glad to send information regarding them.

Bathroom Fixtures.

Catalogue B2 of bathroom fixtures made by the Carriage Mountings Co., Toronto, shows the newest things in nickel-plated soap dishes, towel racks and many other similar articles. The combination tumbler, tooth brush and soap fixture shown by this firm is an article that will certainly be appreciated. Catalogues will be sent on application.

Hardware Specialties.

Many useful articles of household appliances, such as ironing boards, mops, and kitchen utensils are the things shown in a catalogue of the Cumming Manufacturing Co., Renfrew, Ont. Some good articles are contained in their lists of hardware specialties which are quick sellers.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Hague, Sask., will build a new fire hall.

S. K. Bell is enlarging the Crosbie Hotel at St. John, N.B.

The Salvation Army will build a barrack at New Westminster.

The Alberta Milling Co. will double their capacity at Edmonton.

The Canadian Canners will establish a third plant at Hamilton to cost $20,000.

A firm named Compeau & Leduc will put in a saw mill plant at Hazelton, B.C.

J. Burnside, Hamilton, will open a sash and door factory at Lethbridge, Alta.

The Kemp Manufacturing Co. ask for tenders for a six-storey factory in Winnipeg.

W. H. Stone & Co., hide dealers, Brantford, are erecting a new warehouse.

The Petrolia public school board ask for tenders for all trades for a public school.

Milledge Van Buskirk, Harcourt, N. B., will start a brick manufactory near that place.

Goold, Shapley & Muir are contemplating extensive additions to their plant at Brantford.

Carman, Man., will submit a by-law to raise $58,000 to instal light, water and fire systems.

Victoria, B.C., is having $9,000 worth of electrical machinery installed in its new power house.

The Sarnia Match Co. will at once commence building a factory that will employ 300 hands.

The Wade Manufacturing Co. has been organized in Dundas, Ont., to manufacture silver-plated novelties.

W. J. Ireland, architect, of Stratford, is making plans for a three-storey apartment house in that city.

The St. Catharines Building & Paving Co. have reorganized and commenced the manufacture of hollow blocks.

The Jackson Wagon Works is moving from St. George to Galt, where a $12,000 loan has been voted them.

The New Westminster Board of Trade will advertise their industrial advantages through the daily papers.

John Crowe and others, of Guelph, will convert the Crowe Iron Works, recently damaged by fire, into dwellings.

The village of Rigaud, near Montreal, advertises bonuses and special inducements to manufacturers to locate there.

C. N. Choate, of Woodstock, has invented a new cement block machine and with others will manufacture it in that city.

P. Burns & Co., Vancouver, will erect an abattoir in that city this year, which will employ a large number of hands.

C. R. S. Dinnick has the contract for the new press building at the Industrial Exhibition, Toronto. The price was $9,999.

M. A. McNamara, who owns 240 acres bordering on the canal at Peterborough, offers free sites there to reputable manufacturers.

The Nester estate at Ashland, Wis., will dismantle its saw mills and move the machinery to Thessalon, on the Georgian Bay.

The Prairie City Oil Co., St. Boniface, had their plant destroyed by fire. The loss is about $20,000. They will carry on business.

The MacGregor-Gourlay Co. will make large additions to their works at Galt which will necessitate employment for 150 additional hands.

The Yale-Columbia Lumber Co. have acquired the Kettle River Lumber Co.'s business and will operate four saw mills in British Columbia this year.

The Lake of the Woods Milling Co. will build an oatmeal mill at Portage La Prairie, and also extend their elevator system to about 30 more places in the west.

An immense union of Canadian companies is on foot in Nova Scotia. Negotiations are said to be in force which will bring about the amalgamation of the Starr Manufacturing Co., makers of skates, bolts, nuts, railroad spikes and steel forgings, the Dartmouth Rolling Mills, Limited, and the Dartmouth Electric Light Co., all of Dartmouth. Of course everything is in embryo yet, but the initial steps have been taken with a view to accomplishing such a consolidation. There are many advantages said to be possible in the combination and it is very probable that an extensive water power owned by one of the companies will be developed on a large scale and new lines will be manufactured of great interest to Canadian trade. Inquiry in the east has elicited the fact that these statements are not denied and that it is generally felt that such negotiations are in progress.

Companies Incorporated.

The Laurentian Manufacturing Company has been incorporated under Dominion charter with a capital stock of $20,000 for the purpose of manufacturing all kinds of handles and woodenware. The provisional directors are Bannell Sawyer, Thomas Pearson, W. F. Sawyer and E. P. Sawyer, with chief place of business at Westmount, Quebec.

The Bothwell Locomotive Company has been incorporated under Ontario charter with a share capital of $100,000 for the purpose of manufacturing and dealing in locomotives, etc. The provisional directors are James McLauchlan, F. W. Harrison, J. G. Hay, S. J. Parker, G. A. Bothwell and A. G. MacKay, with head offices at Owen Sound.

D. Ripstein has commenced a $25,000 store building in Winnipeg.

Peterborough school board asks for tenders for a new school.

St. Patrick's Church, Hamilton, will build a $12,000 presbytery.

A Baptist church will be built in the eastern part of Hamilton.

The Grand Trunk will build a new roundhouse at Lindsay, Ont.

A Baptist college costing $25,000 will be built at Summerland, B.C.

Donaldson & Patterson will build a $5,000 residence in Hamilton.

J. H. Gariepy, Edmonton, will build a three-storey brick block.

The Imperial Oil Co. will erect an oil warehouse at Portage La Prairie.

J. A. Hawson will build a two-storey brick house at Toronto Junction.

F. J. Restrick & Sons will build a four-storey building in Hamilton.

The National Trust Company will build a new block in Saskatoon.

S. Cruickshank will build a hotel at Elmwood, a suburb of Winnipeg.

Thos. Ryan & Co., Winnipeg, ask for tenders for a seven-storey warehouse.

The Dominion Office & Store Fittings Co. will put up a new building at London.

B. B. McCarthy, reeve of Thamesford, Ont., asks for tenders for five cement bridges.

Darling & Pearson ask for tenders for a laboratory for the University of Toronto.

Huyler's store and factory, Toronto, is having alterations to the extent of $20,000.

Woodstock Collegiate Institute will have an addition built consisting of five more rooms.

Picton is to have a $30,000 collegiate institute, a $10,000 Carnegie library and a $25,000 house of refuge.

BUILDING NOTES.

Regina asks for tenders for a new fire hall.

Paris, Ont., is to have a new railway station.

A. D. White will build a new block in Welland.

A $5,000 library will be built at Burlington, Ont.

Wm. Goldberg will build a $3,000 house in Hamilton.

Porter & Co., Winnipeg, will erect a six-storey warehouse.

The Baptists of Fenelon Falls will build a $6,000 church.

The Baptists of Belleville ask for tenders for a new church.

A $12,000 Methodist Church will be built at Grenfell, Sask.

G. H. Milne will build a house in Hamilton to cost $5,000.

A five-storey addition will be made to Manning Arcade, Toronto.

CEMENT CHIMNEYS.

A concrete chimney reinforced with steel, 350 feet above grade and 18 feet in diameter inside, was built at Butte, Mont., a few months ago. This is but another illustration of what is being

done with this universally adaptable material. The advantages of the chimneys are that they are absolutely air-tight, and as the flue is of uniform diameter with a smooth finish inside, a greater working capacity is obtained than in any other chimney. The total weight of this structure is 2,072 tons, and in its construction about 120 tons of steel were used.

It would seem that the age of cement is upon us when one sees the variety of uses in which it is found superior to either brick or metal. In the smaller constructions also cement is becoming a factor. On the farm there is likelihood of it superseding the use of both wood and tile for drainage purposes, for there is no shape that it cannot be adapted to suit, and once put down, either underground or in the open, there is never any necessity for renewal.

New lines come in from time to time that grow to enormous proportions and often their value is not recognized by us until some one else is reaping a reward in the handling of them. As new uses of cement must come to notice from time to time, it would behoove the hardwareman to keep closely in touch with this commodity, and be the first on the ground with the newest improvements and modes of handling.

With a little advocating of the adaptability and cheapness of cement as compared with other construction materials, and a knowledge of what is being done with it, the hardwareman might easily appropriate to himself the large business that will eventually be done in this material.

DANGEROUS ROOF TANKS.

A few weeks ago a water tank on the top of a building in Montreal crashed through roof and floors of a building where a number of girls were employed and one girl lost her life, it being miraculous that more were not killed or injured. In Toronto, just a short time ago, a tank accident occurred which, although not so serious as it might have been, yet caused a great deal of damage from a leakage during the night. The most recent accident of this nature is one that occurred in Montreal again, when a tank containing 30,000 gallons of water toppled over without any warning and fell to the ground, three stories below, taking with it part of the roof and wall. Fortunately it was at night, and no lives were lost.

Particular care should be taken in the construction of these tanks to see that the structures upon which they rest are capable of carrying the load they will be subjected to. An expert should determine, also, whether the building upon which a tank is to be placed is strong enough to support such a weight. Often a new tank is put on the top of a building that was never constructed to bear such a weight and wind strain.

From the accidents that have happened it would appear, too, that the supports are not inspected regularly enough to ascertain whether decay and weakness is creeping in. Regular painting would also help a great deal, in that it would prevent the iron from corroding, and the wood from rotting, and at the same time enable the workman to see any defects that might exist when applying the paint.

The *Best* Test

The Sherwin-Williams Varnishes are not only a product of the best skill and practical experience in varnish manufacture, but they receive the best test as well. Every batch of every varnish made in The S-W. line is thoroughly tested and tried out in our varnish testing department before it is allowed to go out. A series of tests are made under the same conditions which will be met by the varnish in use and we know just what every gallon of varnish we manufacture will do.

This is but one of the strong points that make ***The Sherwin-Williams Varnishes*** the best line for the dealer. They live up to their great reputation and are always uniform and always satisfactory. They have the best selling helps behind them, too. You have no trouble building up trade with the ***S-W. Varnishes.***

Write us today about them.

BICYCLE NEWS.

A traveling salesman in the employ of a large bicycle manufacturer in Philadelphia was obliged to go on a business trip into the west about the time an interesting domestic event was expected. The salesman desired his sister to wire him results, according to a formula something like this: If a boy, "Man's safety arrived"; if a girl, "Lady's safety arrived."

To the astonishment and chagrin of the father-elect he had been gone but a few days when he received a telegram containing but on word: "Tandem." — May Lippincott's Magazine.

A CIGAR LIGHTER.

A cigar lighter that lights itself is a novelty being placed on the Canadian market by McGaw & Russell, Toronto. The lighter is in the shape of a small nickel-plated tube the size of your little finger. You take the cap off and it bursts into flame. Blow it out and it immediately blazes up again until the cap is replaced. The lighter is a curiosity as well as a very handy pocket piece.

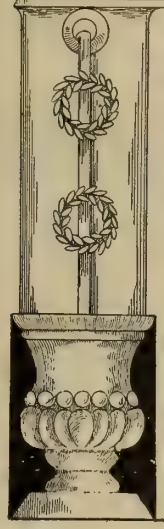
FOR SALE.

1000 SQUARE FEET wire cloth, assorted sizes from 20-inch to 40-inch, at $1.30 per 100 square feet. Box 520, HARDWARE AND METAL, Toronto. [18]

BARGAIN—Thirty gallons Ark Brand mixed paint for sale at 80c. per gallon. Box 517, HARDWARE AND METAL, Toronto. [15]

ROLLING MILL, bolt and nut works—the large and well-eqipped plant of the Louisville Bolt & Iron Works, Louisville, Kentucky. This plant is located in the centre of the manufacturing district for Southern, Western and Southwestern markets; situated in the southern part of the city, containing about 4½ acres; directly on the main line of the L. & N. R R., with proper switching connections to the packing room and for delivery of raw material, etc. Anyone buying and operating this plant will be exempt from city taxes for a period of five years. This plant contains 48 threading, single, double and triple and 14 tapping machines; 10 hot pressed nut machines, 16 bolt forging machines for varied sizes of bolts, with necessary equipment, such as hot blast furnaces, etc.; well equipped blacksmith shop; modern machine shop for repair work, etc.; 1 Belgian train with 12-in. roughing and 8-in. 5 stand, finish train; 2 large coal fired heating furnaces, each with waste heat boiler, with necessary hot bed, finishing shears, separate engine, pumps, etc.; 1 2-stand, 3-high 20-inch muck train, complete with squeezer attached, suitable engine to drive same; 8 busheling furnaces with waste heat boilers, 1 pair hot scales, muck shears, tools and other equipment. This plant has a full equipment of scrap shears and good facilities for handling material; 1 3-stand sheet mill, new and of most modern type to produce maximum product. This plant has ample power, containing 1 275 h.p. Hamilton Corliss engine for bolt and nut department, 1 engine and dynamo, a battery of 2 Atlas Engine Co. boilers and 1 Walton boiler, 1 Stillwell heater and all necessary shafting, pulleys, etc., for running same. A most complete and well arranged nut and bolt packing room. The above machinery is in good condition and could be put in operation without delay. The office is furnished with desks, vaults, safes, etc. This offer is a splendid opportunity for a very remunerative investment with very cheap fuel and water supply. A large pool of water in the plant will supply all of the water needed about the machinery. This is an opportunity rarely found for the manufacture of these products, being the best equipped and most modern of its kind south of the Ohio river. The sale of the property becomes necessary by reason of the death of the president and chief owner. This plant having direct switching connections with the L. & N. R. R., is also directly opposite and within a stone's throw of the very large and modernly equipped shops of the L. & N. R. R. Co., where a very large per cent. of the product should find a ready sale, besides the large local trade, including the Kentucky Wagon Manufacturing Co. For further particulars call on or address The Fidelity Trust Company, Louisville, Kentucky, until the 16th day of May, 1906, at which date the property will be sold at auction on the premises.

BUSINESS CHANCES



HARDWARE BUSINESS — Doing good trade; stock $6,500, may be reduced; owner has other interests; a splendid opportunity. Box 523, HARDWARE AND METAL, Toronto. [18]

HARDWARE—$3,500—Large town; one opposition. Box 519, HARDWARE AND METAL, Toronto.

THE largest and best paying hardware business in Western Ontario; stock will inventory $25,000; reasons for selling, owners have other interests. Box 522, HARDWARE AND METAL, Toronto.

THIS IS THE SHEET METAL AGE

THE GALT ART METAL CO LTD

OUR LINE

Galt "Sure-Grip" Shingles
Quick sellers, quick layers, best roof made.

Galt "Art" Sidings
Galvanized and painted. Very bold, handsome stone and brick effects. Heavy, prominent mortar lines and tuck pointing.

Galt Classik Ceilings
Harmonious designs, interchangeable parts. Easily applied, perfect finish.

Cornices and Skylights
Any design or style; work from architects' details our specialty.

Corrugated Sheets
And all accessories. Straight, true corrugations, all the latest touches in this very popular form of roofing and siding.

We want representatives in every place
Dealers should have our catalogues.

SITUATIONS VACANT.

WANTED—An experienced hardware clerk. C. M. Cutts & Co. [17]

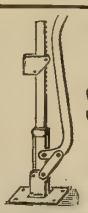
WANTED—A first-class hardware clerk at once. Apply stating experience and salary required, to the Geo. Taylor Hardware Co., New Liskeard, Ont. [16]

WANTED—Hardware salesman experienced in all lines; careful stock-keeper; taking manner; must be able to start and close sales; steady job. With application state when can come, age, salary and send references. Box 521, HARDWARE AND METAL, Toronto.

A SMART, active man wanted for Saskatchewan who understands steam heating and plumbing; must be able to figure the cost of any job; to the right man full charge of this department will be intrusted. Apply Box 515, HARDWARE AND METAL, Toronto. [17]

RETAIL hardwareman wanted for Saskatchewan who has some knowledge of bookkeeping; state age, experience and references. Box 514, HARDWARE AND METAL, Toronto. [17]

FIRST-CLASS hardware clerk wanted; must be strictly right on builders' hardware and have some ability as a window dresser; good chance for a hustler; write me quick, stating wages, experience, etc. J. C. Wanless, Chatham, Ont. [17]



HARDWARE buyer wanted; must be thoroughly experienced, up-to-date and capable of systematizing this part of the business. Apply, giving references and stating salary expected, to Ross Bros., Limited, Edmonton, Alberta.

TRAVELER WANTED.

WANTED—Glass Traveller. Apply only by letter to the Consolidated Plate Glass Co., Toronto. [17]

METAL SHELF BOXES

DO you know that your customers are judging your stock by the general appearance of your store? It is absolutely impossible to keep your goods neatly arranged without using some kind of shelf boxes. Our system enables you to keep all goods of one kind together; you always know when your stock is running low, and you never have to tell a customer you are just out of what they want and then find the next day you had plenty in stock. The Bennett Metal Shelf Box has been on the market for years. Some of the best hardware stores in Canada have thrown away their old wooden boxes and put in our up-to-date metal box. Cameron & Campbell, Toronto.

PLUMBING AND STEAMFITTING

THE PLUMBING OF A COTTAGE

by J. A. F. Cardiff in the National Builder, Chicago.

ARTICLE IV. (Continued.)

Rain Leaders.

The term rain leader is applied to a vertical line of pipe used to conduct the water from the roof of a building.

When placed on the outside of the building, it should be constructed of sheet metal from the gutter on the roof to a point about five feet above grade. From this point to its connection with the house drain it should be of extra heavy cast iron pipe.

When located inside of the building leaders should be of extra heavy cast iron throughout their entire extent, and joints should be lead caulked gas and water tight. Wrought iron or steel pipe may also be used.

Outside leaders, where exposed to freezing weather, should be constructed of corrugated sheet metal; the corrugations permitting of enough play to take up the expansion of the water when frozen. Plain cylindrical or square sheet metal leaders are likely to burst with the expansion of frozen water.. The lengths of pipe are put together with loose slip joints.

When we consider the construction of sheet metal leaders, the necessity for their being trapped is apparent. Were they not trapped they would act as vents for the house drain, and if located near any windows or openings to the house would be dangerous, because of the foul air and gases ejected. The water seal should be maintained by means of a running trap located inside soil, waste and vent stacks and there is, therefore, no objection to the omission of the trap, although some authorities advocate, and the plumbing laws of many cities require, its installation. Fig. 24 shows the connection of an inside leader without a trap. It will be noticed that in the case of leaders connected to the house drain, as by this means the drainage system is thoroughly flushed during rain storms.

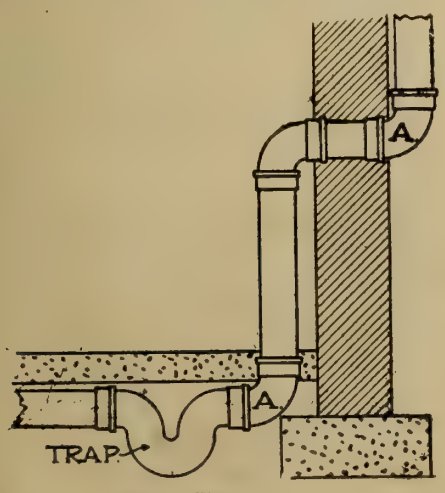

Fig. 23

of the building where it will be protected from frost. See Fig. 23.

When inside leaders are used, however, it would seem advisable to omit the trap and let the leader serve as a vent pipe also. It is constructed gas and water tight after the manner of er connections, the use of the short quarter bend "A" is permissible.

Fig. 25 at "B" illustrates a running trap constructed of quarter bends. The advantage this trap has over the ordinary running trap "C" is the depth of the water seal. In the event of a drought the water seal in the ordinary running trap, which is never over one inch, is likely to be broken through evaporation, thereby making the leader a temporary vent, while the depth of the water seal in the trap "B" would, in all probability, preclude such a circumstance.

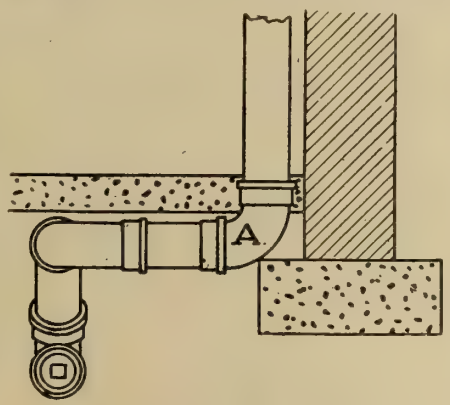

Fig. 24

Roof connections for inside leaders should be made by means of a short piece of heavy lead or seamless drawn copper tubing, soldered to a brass ferrule or nipple caulked or screwed into the iron pipe. The mouth of the leader should be protected with a wire basket so that leaves, etc., can not enter.

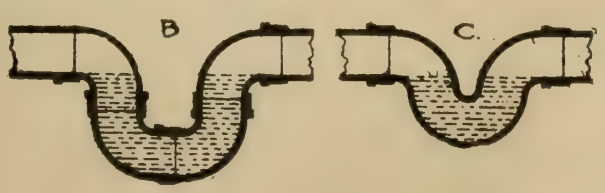

Fig. 25

Rain leaders should never be less than two inches in diameter and for cottages seldom need to be over four inches in diameter.

Occasionally leaders are discharged on the ground and sometimes are trapped and connected to the house sewer outside of the main trap. It is advisable, however, to have at least one, if not all leaders, connected to the house drain, as by this means the drainage system

Fig. 26

Yard, Area and Floor Drains.

The function of yard and area drains is to remove all rain water from the yards and areas.

The catch basin (Fig. 26) to which area or yard to be drained is graded, is connected to the drainage system in the same manner as rain leaders. The catch basin is a cast iron receptacle $10\frac{1}{2}$x$10\frac{1}{2}$x$8\frac{1}{2}$ inches, fitted with a removable cast iron grating and provided with an outlet for either three or four inch pipe as may be desired.

Yard and area drains, where possible, should be connected to a rain leader on the leader side of the leader trap (Fig. 27), rather than trapped independently, as in this way a more reliable water seal is secured. The flow of water in a leader being much heavier than in a yard or area drain, there is less chance of its water seal being broken through evaporation. When it is not possible to make such a connection, the yard and area drains should be trapped with running traps located inside of the building where they will be protected from frost. See Fig. 28.

Floor drains should never be used in cellars or basements unless arrangements are made to maintain a permanent water seal in the traps. They are useful in the event of water percolating the cellar walls during a severe storm or in the case of a main supply pipe bursting or a fixture overflowing and thereby flooding the cellar, but such accidents do not happen with sufficient frequency (any assertions of the cartoonist in the funny papers to the contrary notwithstanding) to insure a constant water seal.

The drain may be connected to a rain leader (Fig. 29) in the manner suggested for yard and area drains and the

ingress of sewer gas and foul air prevented by the seal maintained in that way, or it may be trapped independently (Fig. 30) and the seal maintained by flushing it periodically from a water

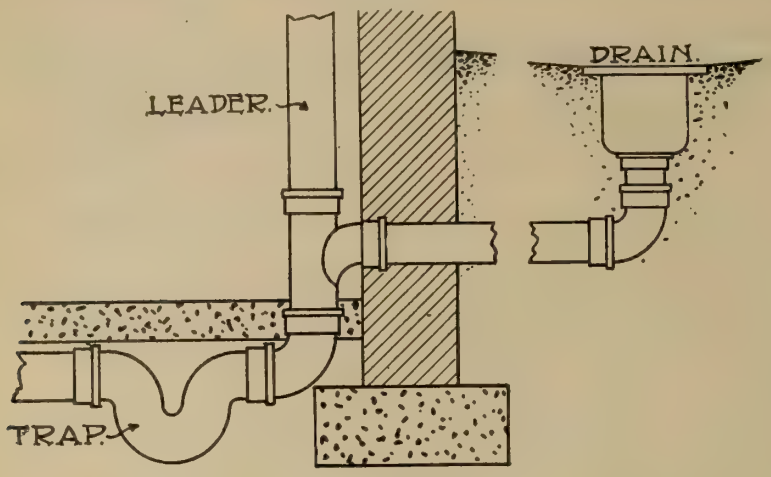

Fig. 27

supply pipe placed over the drain. The objection to the latter method is that the average housekeeper would not flush the drain with sufficient frequency, if at all, to secure the desired seal. For this reason, sanitary experts do not sanction the use of a running trap on a cellar floor drain. It is very rarely the case that the floor drain can

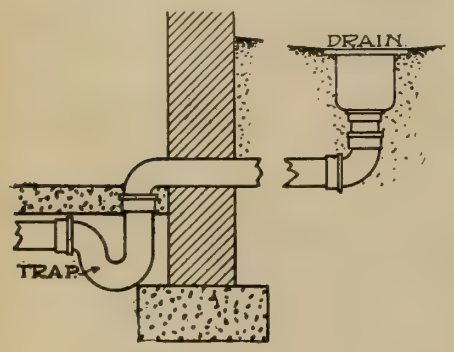

Fig. 28

not be controlled by the leader trap, and in such an instance it is advisable to omit the drain.

There are many ways in which the cellar walls and floor may be made impervious to water, and when they are so constructed there is no objection to omitting a floor drain.

When the drain is omitted the cellar

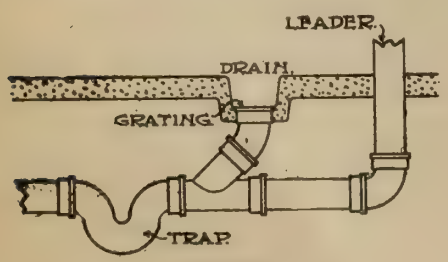

Fig. 29

floor may be graded to the main trap, and whenever there is water in the cellar the screw cap of the inside hub of the main trap may be removed so that the water can pass out that way.

Fig. 31 illustrates a cast iron cesspool with a bell trap, a very satisfactory drain where there is a sufficient flow of water to keep the seal unbroken. The top grating is made of malleable iron and the lower grating of cast iron. Both are removable. The trap is formed by the bell attached to the lower grating.

When floor drains are located in cellars or basements, a back water valve (Fig. 32) should be provided to guard against an overflow of sewage through the cellar drain in the event of the house drain becoming stopped up. The valve is made of cast iron, except the inside pipe and gate, which are of cast brass. The gate, which is hinged at the top, readily opens for the outflowing water but closes when there is a back flow from the sewer.

PIPE TROUBLES.

If, when a piece of pipe is screwed into a fitting, it is out of line, it is a very simple matter to determine, by turning the pipe a half-turn, whether the trouble is in the fitting or in the pipe. If the pipe then maintains its original alignment, the trouble is in the fitting; but if the pipe slants in the opposite direction, it is perfectly apparent that the difficulty is in the way the threads have been cut on the pipe. Crooked threads on pipe are usually threads that are cut by dies in stocks, and are caused by the fact that the distance between the die and bushing is too short. In cases where the bushing is badly worn, the die is quite as apt to cut a crooked thread as a straight one, as the bushing does not keep the die in alignment with the pipe.—Domestic Engineering.

TRADE NEWS.

J. H. Wilson, of the John Ritchie Plumbing & Heating Co., Toronto, who has been ill for some time, is improving slowly.

A. H. Richardson, who has been with the John Ritchie Plumbing & Heating Co., Toronto, has resigned, to become traveling salesman for the Dominion Radiator Co.

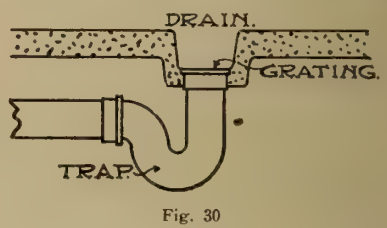
W. J. McGuire & Co., who have the plumbing contract for the new Traders' Bank Building, Toronto, are well advanced with it, having the roughing in work about completed.

The Plumbers' Brass Supply Co., 757 Queen street west, Toronto, are to remove on May 1 to larger quarters at 756 Queen street west, where a full stock of supplies for plumbers and fitters will be carried. The company is composed of Messrs. A. J. Jackson and F. A. J. Hunt.

Keith & Fitzsimons, Toronto, have the contract for the electric lighting fixtures for the Clifton House, Niagara Falls. Most of the fixtures will be specially constructed from the decorator's designs, and when the work is installed the whole effect will be one of the most artistic in the province. Work is to be finished by June 15.

LAUNDERED AIR.

In an office at Pittsburg, an apparatus has been installed in connection with the heating and ventilating system, whereby the air is washed and all dust and soot removed before it is put in circulation.



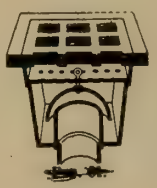


Fig. 30

A published account of this system has stirred the muse of a local paper, states the American Machinist, to perpetrate the following:

I can stand your tainted money, I can
stand your tainted grub;
I can drink polluted water and employ
it when I scrub,
But since noting this invention I shall
never, I declare,
Be content again with breathing anything but laundered air.

Give me clothing filled with shoddy, filled with microbes, if you will;
Let a million microbes bite me when I
touch a dollar bill;
Let the germs come swarming o'er me
when I take an easy chair,
But I pray you do not give me anything
but laundered air.

Fig. 31

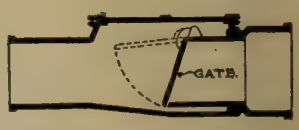

Fig. 32

If ozone can now be laundered, can't we
neatly crease it too—
Hand it round in snowy bundles like the
laundry people do?
Oh, I hope the time is coming when to
laundries we'll repair
Bright and early Monday mornings for
our week's supply of air.

THE HUMIDITY OF AIR IN BUILDINGS.

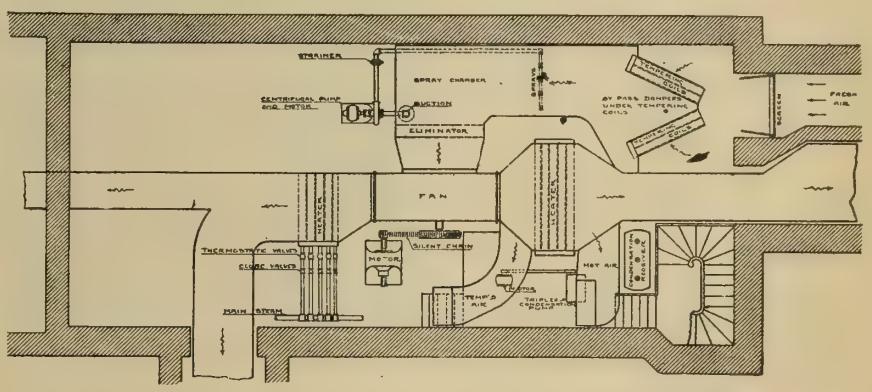
The necessity of ventilation for hospitals, schools and all public buildings is generally acknowledged. While it is to be regretted that provincial laws do not make ventilation compulsory, this is not of such great importance, for ventilation is generally given due consideration. The question of humidity, on the other hand, has been given but comparatively little attention, and is evidently not clearly understood.

The development of heating systems from primitive methods is interesting. One of the earlier, and in some respects one of the best, methods of heating and ventilation is the old-fashioned open fireplace. The draft produced by the large chimney and open fire gives ample ventilation, but the distribution of heat is necessarily poor, and as a heating system this method is most uneconomical.

Evolution of Ventilation.

Benjamin Franklin, realizing the deficiency of the open fireplace, designed the Franklin fireplace, which has been further modified and is still used as the Franklin stove. The next step in the evolution of the art was the closed stove, which, while it improves economy, sacrifices ventilation. A modification of the stove is the hot air furnace, which gives a certain measure of ventilation, though it is limited in quantity, and too unreliable to make its use permissible in large, densely peopled buildings. In addition it is often harmful to health owing to the unavoidable leakage of poisonous products of combustion. Owing to the low furnace temperature permissible, its economy is much below steam and hot water systems.

The next advance is marked by the introduction of direct radiation, using steam or hot water furnaces. Here again while a great advance in economy of operation has been made there is no provision for ventilation other than the leakage of fresh air through windows or doors. Owing to its cheapness this system has been extensively introduced, and as a result close, stuffy, steam-heated school rooms, offices and public buildings have doubtless increased materially the world's death rate. To remedy this defect various devices have been improved, with more or less success. The use of indirect radiation permits a certain amount of ventilation and elaborate systems have been devised on this principle. They are dependent upon such variable and uncertain conditions as the velocity and direction of the wind, and differences of temperature in and out of doors. On this account they failed to meet with any great measure of success wherever definite requirements of ventilation were expected. Aspiration shafts for removing foul air in connection with indirect systems have given more effective results. In the latter system radiators are placed in the vent flues to produce a draft by increasing the temperature of the foul air escaping. The cost of ventilation by this method is enormously expensive, for the foul air escapes at too high a temperature, and the use of vent shafts as substitutes for the fan is indefensible.



Moisture in the Air.

While ventilation with a fan is universally accepted in modern engineering practice, it is to be noted that even with this system no provision is ordinarily made to moisten the air. In schools and other public buildings the humidity of the air is of more consequence than is usually supposed. The amount of moisture which air can hold at saturation per unit of volume increases very rapidly with the temperature. At 70 degrees air will hold 8 grains of moisture per cubic foot, while at 32 degrees it can hold but 2 grains per cubic foot, and at zero only one-half grain. Air normally has a humidity varying from 50 to 70 degrees, while if much above or below these limits it becomes uncomfortable if not actually injurious to health. Hence, air at 70 degrees should contain from 4 to 5½ grains per cubic foot, while at zero it contains only about one-half grain, so that in the usual system of heating, while at zero outside the humidity of the air when heated to 70 degrees will be only 6 per cent. or less than the humidity of the driest climate on earth. It is this extreme dryness of the air in heated rooms without humidifying systems which produces many of the discomforts commonly noticed but not fully explained, such as extreme thirst, a parched feeling in the nose and throat, lassitude and headaches. The effect of dryness is also very harmful to the mucous membrane in the nose, throat and lungs, and may be considered a contributory source of many throat and pulmonary diseases.

In dry kilns results are secured by the use of this very principle. The kiln is heated to a higher temperature than the outside air, which makes it possible for the inside air to abstract moisture from the material to be dried. It is evident that our so-called modern heating systems are nothing more or less than dry kilns, and very effective ones when the outside temperature is low. With severe outdoor temperatures nearly all of the moisture is frozen out of the atmosphere, and when reheated there is a great capacity for evaporation, the indoor air being driest when the outdoor temperature is a minimum.

Regulating the Humidity.

From a hygienic standpoint it is evident that the means for regulating the humidity should be considered side by side with proper ventilation. The effect of humidity is, however, quite marked in every way and deserves consideration from an economical standpoint. If the thermometer bulb is covered with a damp cloth a drop of several degrees in temperature will ordinarily be produced. This wet bulb temperature may be termed the sensible temperature, as it is the temperature that the body feels. This sensible temperature is dependent upon the temperature of the air and upon its humidity. The less the humidity, the greater is the difference between the actual and sensible temperatures, while at saturation they are the same. It should be noted that it requires a much higher temperature in dry air than in moist air to maintain a given sensible temperature. For example, 65 degrees with normal relative humidity gives a sensible temperature of 58 degrees or the same sensible temperature as produced by an actual temperature of 76 degrees with 30 per cent., or 70 degrees with 46 per cent. humidity. This explains why one's feelings do not always correspond with the indications of the thermometer, and why rooms heated to an apparently high temperature are often uncomfortably cool. While a considerable heat is unavoidably absorbed in the introduction of additional moisture in the air, it may be shown that this is entirely offset so far as the ventilating air is concerned by the economy of the lower room temperature maintained, for as a lower room temperature means a decreased radiation loss there will be in this respect a distinct gain in favor of properly moistening the air.

An Air Washer and Humidifier in Connection with a Fan Ventilating System.

It is not the intention of this article to describe a system of ventilation and moistening which is suitable for private houses or small buildings, but only equipment satisfactory for hospitals, schools, churches, offices, bank buildings and large buildings in general.

Air Washing Apparatus.

Shafts extending through the roof of required size for the inlet of fresh air are more often than not impracticable, and when air is taken at the street level and, as sometimes happens, through sidewalk openings, dust and filth enter the flues and find their way into the rooms. Cheese cloth screens to be effective must be frequently replaced, as they are quickly clogged up. The act of replacing shakes more or less of the dust loose and often the screens are thrown to one side, because the janitor finds it too much trouble to look after them. Obviously any arrangement to be effective must be automatic, and this is true of the Buffalo air washer, which requires

less space than screens of cheese cloth or coke filters, is self-cleaning, and, by finely divided sprays, is claimed to remove all of the solid matter in suspension. A typical arrangement of the Buffalo air washer and humidifier is shown in the accompanying engraving, where an indirect steam heating system is used. This apparatus was finally perfected and patented a year ago by the Buffalo Forge Company, as a result of the excellent results obtained from installations in connection with fan heating and ventilating systems which had been in service for some time.

The air washer consists of a system of closely spaced spray nozzles, galvanized iron or copper baffle plates, eliminators for removing the water in suspension and the necessary casing and tank to make the apparatus air and water tight, clean and economical in operation and automatic, so far as any attention is concerned, except starting up the circulating water for the sprays whenever the heating system is put in operation. Patented spray nozzles are used, which instead of throwing the water in sheets separate it into an impalpable mist and are so designed that they will not clog up. The water-laden air impinges on zigzag continuous plates, which are constantly covered with a film of moisture.

By atomizing the water the amount which is required is minimized, and as all the water returns to the settling tank it may be recirculated. The extent and arrangement of contact surfaces are such that the resistance to the flow of air is negligible, and it is so compact that the whole apparatus takes up little more space than a bank of fan system heating coils. The baffle plates cleanse themselves, all the dirt passing to the settling chamber. City water pressure may be used for the sprays, or, when the water is recirculated, a small centrifugal pump supplies the necessary pressure. The same apparatus is used for cooling in Summer.

The Canadian Buffalo Forge Company control the patents of both the construction and the process in Canada and have successfully installed the system in the St. Paul's Hospital, Montreal, and the St. Boniface Hospital, St. Boniface, Man., besides other contracts under way in many places already equipped with ventilating apparatus. The system is a satisfactory solution of properly moistening the indoor air, by moistening the air supplied for ventilation. At the same time it not only supplies moisture, but in addition thoroughly cleans and purifies the air thus admitted, taking out all dust and removing such gases as are readily soluble.

LOSS OF HEAT FROM PIPES.

In a recent address before the Canadian Society of Civil Engineers, R. W. Leonard treated of the loss of heat from pipes carrying warm water, he having made experiments on 1-inch and 2-inch pipes, black and rusty black, or ordinary type on 2-inch pipe and 28 and 26 gauge, or 0.016 inch and 0.018 inch thick; on 2-inch lap-welded boiler tube, and on 1-inch welded galvanized steam pipe. The pipes were filled with warm water and exposed to air.

A 2-inch black pipe, 0.154 inch thick, containing 5 pounds of water, had a surface of 2.20 square feet, being 3.54 feet long. It cooled from 142 to 32 degrees Fahr., and lost heat at the rate of 124 British thermal units per hour in still air at 7 to 10 degrees Fahr. Cooled from 126 to 32 degrees, the loss was 112.6 units under the same conditions, and 217.3 units in an air current of 8 to 12 inches per second at 5 to 7 degrees Fahr. of temperature, thus showing the extreme importance of non-movement. In water at 32 degrees Fahr., the same pipe lost heat at the rate of 309 units per hour when cooled from 126 to 32 degrees, and at 269 units when cooled only from 116 to 32 degrees. In a current of only 1½ inches per second of water at 32 degrees, and cooling from 116 to 32 degrees, the loss was as high as 849 units per hour. Cooled from 142 to 32 degrees, a 2-inch pipe, only 0.095 inch thick, cooled at the rate of 136.7 units in still air of 7 to 10 degrees, of 385 units in still water at 32 degrees Fahr., and of 1,005 units in a current of 1½ inches per second. Thin galvanized pipes lost heat at higher rates, and thin-tinned pipes at still higher rates.

PLUMBING DISPLAY.

The accompanying cut shows the front of the plumbing shop of H. E. Hertner, Girard, Kansas, it being very striking both in the architecture of the building and in the arrangement of the display. As will be seen, the space available for display is divided between a model kitchen and a model bathroom. In itself this is by no means original, but it is seldom that the two displays can be made so attractive and so easily seen by the casual passer by on the street. Mr. Hertner's neat display is well known through the States and Canadian plumbers will study it with interest.

RETURNED APR 30 1906

An Attractive Plumbing Shop.

ENAMELED WATER CLOSET TANKS.

As the old-fashioned wood-rim bath tub and the unsanitary wood-encased lavatory have been forced to give way to the beautiful porcelain enameled roll-rim bath and the open, one-piece lavatory, so the wooden closet tank is likely to be supplanted by the handsome, sanitary and serviceable porcelain enameled tank. Except in the case of very cheap work, the indications are that the wood tank will shortly be seen no more, the enameled tank having been demonstrated to be so greatly superior to it in every way.

We have come to recognize sanitation as one of the most important elements of civilization, and are beginning to understand that articles made of wood have no place in the bath or toilet room. Dampness will crack the wood, and too much heat has a likewise injurious effect. It is, therefore, very evident that vitreous, glazed materials, such as porcelain enamel, are in every way superior to fixtures which have about them any parts of wood, marble or other porous substances. That the porcelain enameled tank is destined to become as popular and universal as the porcelain enameled bath tub goes without saying therefore. The public is taking more interest in matters pertaining to the bath, the health and cleanliness, and along with this interest more attention is bestowed upon the particular devices and equipment of bath and toilet rooms. We are made aware of facts and fundamentals relating to hygiene of which we formerly never dreamed. We realize as never before how plumbing and sanitation has advanced. We appreciate the dainty, immaculate bathroom, with its walls and floor of tile, its bath of pure white enamel, the dainty one-piece enameled lavatory and the porcelain enameled closet, which has proven to be such an important step forward in modern sanitary appliances. We therefore welcome the advent of the enameled closet tank, knowing that it will add to the health, cleanliness and beauty of the bath and toilet room.

The wood tank, as everyone knows, is very easily scratched, marked or defaced, the surface being polished or varnished and the polish will rub in cleaning. Moreover, the tank is made in several parts. The linings in wood tanks in most cases are of 8 or 10 oz. copper, through which the water will in time eat its way. When this occurs the wood is destroyed, the water leaking through the seams, destroying the polish and running over the floor of the bathroom.

The heat of the bathroom has a natural tendency to crack the woodwork of the tank, and it is on this account that so many wood tanks give way. When the closet is placed in a damp place, the dampness also causes the woodwork to crack.

The great advantage of the enameled tank is that it is made in one solid piece (the top of course being separated) and is enameled both inside and out, making it an ideal fixture for the service to which it is put, as it becomes as it were a porcelain water vessel, and does not sweat, crack nor craze; is not affected by heat or cold; it has no lining to weaken and break away, creating leaks, and can be readily cleaned both inside and out. The beautiful design and finish of the porcelain enameled tank make it a most attractive article. In short, the advantages of the enameled tank are the advantages of the china water vessel over one of wood and copper.

The Standard Sanitary Mfg. Co., Pittsburg, has designed and placed on the market several different styles of porcelain enameled tanks for low-down closets. The tanks are made in various attractive designs and can be furnished for syphon jet, syphonic or wash-down closets. It did not take the pub-

lic long to recognize the advantages of the enameled tank, as many of the finest office buildings, hotels, private residences and railway stations in the country are already equipped with the fixture.

In the matter of cost the enameled tank is slightly higher than the wood tank, as the former is coated both inside and out with a heavy body of porcelain enamel. Moreover, the life of the wood tank is short, while the enameled tank will in the ordinary course of events last a lifetime. The greatest feature of the new tank, however, lies in its enhancement of sanitation. It is another demonstration of the uses to which porcelain enamel may be applied in the equipment of the bath and toilet room. Its advent is especially notable, being significant of the advancement of taste and knowledge of practical sanitary equipment, the discarding of the false and unsanitary for the durable and sanitary.

STOPPAGE IN GAS MAIN.

A curious stoppage in a gas main which had been in continuous use for over forty years without having given trouble was unearthed recently by E. H. Yorke, superintendent of the Portland (Me.) Gas Light Company, after much excavating. The trouble was found to have resulted from the fact that when the main was laid the spigot end of a length of pipe not having been forced up against the shoulder of the bell when the joint was yarned, the yarn was driven through the opening and formed a network over the entire area of the end of the pipe. This yarn served as a screen to arrest the naphthaline carried in the gas flow, and a deposit had formed until it effected a complete stoppage.

GAS AND ELECTRIC SPECIALTIES.

The Frederick-Elder Co., of Pittsburg, Pa., invite those who handle gas and electric supplies to write for their catalogue and prices. Some artistic goods are shown in the booklet.

THE BEST CARBIDE.

At the acetylene congress recently held at Liege, Belgium, several interesting discussions arose on the subject of impurities in calcium carbide. It was pointed out, as has always been claimed by the American carbide producers, that the employment of pure limestone, free from phosphates, in order to avoid the introduction of phosphate into the carbide, would in many cases greatly increase the cost of production. The Acetylene Journal asserts that it is well known that American consumers of carbide have the benefit of the best product of that kind in the world. What may not be so well known is that the respect in which American carbide differs from the European is in the use of a select and costly grade of lime stone which insures maximum purity of the product.

J. H. Knight, of Toronto, has begun work on an eleven thousand dollar sewer contract in Welland.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 27, 1906.

Everything is alive and large wholesale houses are busy as possible sending rush orders to all parts of the country. This is occasioned by the building activity which has been generally in vogue and which has so stimulated early Spring orders. A slight touch of cold weather had no deterrent effect and the trade is increasing in volume every day.

A notable development is observed in all the scientific apparatus for modern plumbing and ventilation, which is selling freely. All the large factories are being equipped with modern accessories for healthful comfort of the employees.

RANGE BOILERS—Constantly increasing trade and great activity. Our quotations are as follows: Iron clad, 30 gallon, $5.00; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

IRON PIPE— The high prices hold permanently and the tendency is towards greater strength. We quote: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Demand is increasing every day. Prices are firm and have a tone tending towards advancement. Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE—The mills are all busy and the demand appears to be increasing on all sides. No abatement is looked for and prices are firm. We quote: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $550; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50;; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Navigation on the rivers is open and shipments are large. Activity rules in these lines. No change in price is reported. We quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Tin is still regulating to some extent the price of solder, but prices continue high for the former and there is every prospect of the maintenance of firm prices. No change has taken place in prices. Our quotations are as follows: Bar solder, half-and-half, guaranteed, 22 3-4c to 23c.; No. 2 (wiping solder), 18c.

ENAMELWARE—No change in prices. We quote as follows: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special, $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, April 27, 1906.

The demand for all plumbing supplies has become very great, so much so that many jobbers are having trouble in getting out anything near like a complete order and are compelled to send part shipment here and there just to keep customers going. This demand is particularly difficult to meet in enamelware and malleable iron fittings although the manufacturers of these goods are running day and night.

Toronto plumbing is still rather quiet, but the amount of building being done must soon make itself felt in the trade.

All prices remain the same as previous quotations.

LEAD PIPE—A large amount is being sold. Prices firm, no change. We quote: Lead pipe, 8c., discount, 20 per cent.

SOIL PIPE AND FITTINGS — The volume of business being done is very heavy all over the province. Prices remain the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

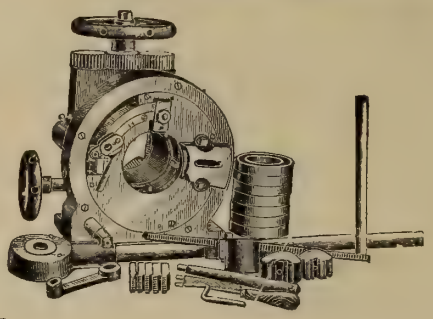
IRON PIPE—Prices remain the same, with the usual large demand. We quote: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—A difficulty is found in getting enough to supply the demand. Prices continue same as previous quotations. We quote as follows: Cast iron elbows,

tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS—A goodly amount is being sold for future delivery, but present business continues quiet. There are no price changes. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14.00; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Not many radiators are going out just now, but the indications are that a lot will be used this year. We quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.



SOLDER—Prices are quite firm at present quotations and considerable is being asked for. Bar solder, half-and-half, guaranteed, 23 1-2c., and wiping at 21c.

ENAMELWARE—Great difficulty is still experienced in getting supplies, the output not being equal to the demand. We quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special, $22.40. Fittings extra.

ALUMINUM SOLDERING.

While it has been found that aluminum can be soldered, still it cannot as yet be done so easily or so successfully as can other metals. Experiments have shown that the problem does not altogether lie in the solder, but in cleaning the aluminum, which oxidizes almost as quickly as it is cleaned. The oxide is in a thin white film, which from its lack of color is scarcely apparent. Nevertheless it does exist, and were it not for its presence there would be no greater difficulty than there is in soldering tin. The problem, then, is to find a suitable flux to mix with the solder, and as far as the solder is concerned the less lead in it the better, as lead does not readily alloy with aluminum. Although ordinary half and half solder has been found successful with aluminum in some cases, pure tin works better.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

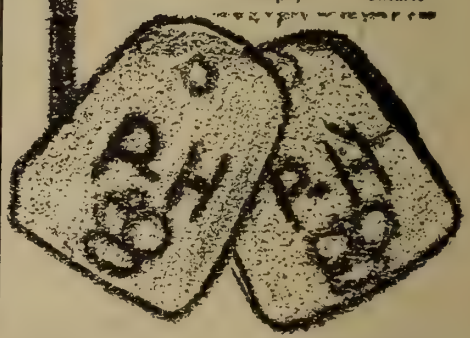
—— the pipe with the brand IN it——

We *must* be sure of our pipe's quality to brand a trade mark into the hot metal itself.

The point is to get *you* as sure of P.-H. Pipe as we are—that's why we brand it where you can see the brand.



No dodging responsibility then, is there?

When you make up your mind that quality in pipe is worth paying for—and that nothing but quality *is*—then we will show you that *absolute* quality doesn't imply higher cost.

P.-H. Pipe, even with the guarantee back of it, competes in price with the may-be goods. Will you read the book that tells why Your copy waits for your call.

MUELLER WATER STRAINERS

PATENTED

C 109

When the water supply comes through the water works filter, plumbing fixtures are very well protected from sediment; but it occasionally comes direct on account of the filter being out of order or in cases of fire, and something is needed to protect the fixtures then.

The Mueller Water Strainer will strain the sediment out of unfiltered water. It gives protection to the plumbing fixtures on all occasions, whatever the condition of the water supply.

The Mueller Water Strainer is made of cast iron, has a brass gauze screen and brass plug, and is made for all sizes of pipe up to 3 inch.

Each strainer is carefully inspected and assembled, bears the Mueller trade mark and is *unconditionally guaranteed*

Business Getters for Tinsmiths

Are there any defective chimneys in your locality?

Then it is your chance to ge business.

THE

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft and, therefore, easy combustion.

By using the ZEPHYR, it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM.

This is what others think of it :

MONTREAL, June, 1901.

Messrs. J. W. HARRIS Co., Lt'd.,

Dear Sirs,

We have been using two (2) of your "AEOLIAN" Ventilators for the past three years, and would say that they have given entire satisfaction and are certainly all that you claim for them.

Yours respectfully, WARDEN KING & SON.

We manufacture and guarantee :

The Harris Filter
The Aeolian Ventilator,
The Zephyr Ventilator,
Expansion Conductor Pipe.

The J. W. HARRIS COMPANY, Limited

Successors to LESSARD & HARRIS

Wall Paper

Special Designs and Colorings

FOR

Churches and Lodge Rooms

For Churches

An effective and suitable Wall Paper, especially designed in a decorative fleur-de-lis pattern in rich, chaste colorings. Prepaid samples on application.

For Masons
For Knights of Pythias
For Odd Fellows

Special and separate designs for lodge rooms, introducing the mystic symbols of each of the three fraternities mentioned above. In four rich shades —blue, green, red and brown. Samples prepaid if you write for them.

A. C. LESLIE & CO., MONTREAL Managers Canadian Branch.

The Make of the Mower is Everything

You have found that out yourself when you have talked to a customer about an unknown machine. Our

LAWN MOWERS

are known everywhere. Being known, however, isn't of much value unless it means being known for the Best—the case with our Lawn Mowers exactly.

Order our machines and set your mind at ease on the sales question.

Was a copy of the Lawn Mower Catalogue sent to you? If not, write us.

Hollow Ground
$2.00
Double Concave for
Extra Heavy Beards
$2.50
Pair in Leather Case
$4.50
Carbo-Magnetic
Strop $1.00

NO HONING **NO GRINDING**

NO NEW BLADES **NO ANNUAL TAX**

FIRST PURCHASE PRICE THE ONLY EXPENSE

If you will send us your dealer's name and let us know whether he handles the Carbo-Magnetic razor, we will send you our **booklet, "Hints on Shaving," Free,** and also make you a proposition whereby we will arrange with your dealer that you can test and use one of these razors **without any risk** or obligation on your part. The booklet illustrates the correct razor position for every part of the face, and gives much needed information to all self-shavers. The Carbo-Magnetic razor is for sale by most good dealers who guarantee it—we back their guarantee. Send for book to-day.

LIMITED

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

"HOT BLAST" BLOW TORCHES

HOTTEST FLAME ON EARTH

Does your stock include them? Blow Torches are used at this time of year by painters and tinsmiths all over the country, and there's no reason why **YOU** shouldn't capture the trade in your town.

"Hot Blast" Blow Torches and Furnaces are Hot Sellers

They're not only superior in point of heat-production, but also excel in material and workmanship, when compared with others.

Have fewer parts and accomplish more than any other "Blow Torch" of equal size.

If you don't handle this line, let us send you a sample order.

If you do handle them, get our prices before placing your next order; you might save money by doing so.

Our new way of Selling Sharpening Stones

PRICE LIST

Giving list prices of our best selling Oilstones, Scythestones and Hones **by the dozen** put up in single cartons or **convenient packages.** This list covers all the items sold in our special selling assortments, and covers the sharpening stone line as handled by most jobbers and retailers. The object of this is to enable the jobber to handle refilling orders for the selling assortments, and at the same time to fill miscellaneous orders from the same stock, and the retailer to purchase stock for refilling selling assortments or regular stock in **convenient packages** at **prices per dozen.**

DAVID MAXWELL & SONS, ST. MARYS, Ontario, Canada

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.
Dept. J, Hamilton, Ont.

A Correction and a Moral

Some dealers imagine that the more attachments a wire fence has the more effectively it will weather atmospheric changes

This is a great mistake!

If attachments always worked they might recommend themselves, but time tells its tale to the chagrin of the owner of the fence, and trouble begins—**Locks, Clamps, Ratchets** will be sure to **rust, break and come loose.**

Dillon Hinge-Stay Field Fence

is made without "attachments." Each Stay forms a perfect hinge, and being of medium temper no breaking ever occurs.

The Strands and Stays—that's all there is to the **Dillon**—are perfectly put together, **thus making a perfect field fence.**

As the price is reasonable you should order.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

Careful Investigation

The most thorough examination fails to reveal anything wrong with **The Martin-Senour Paint.** It's purity is unimpeached by chemical analysis and it stands the test of wind and weather outside and constant wear within. From a commercial standpoint its an attractive proposition for paint men and affords opportunities for trade building which no enterprising paint dealer can afford to neglect. There are plenty of paints which sell readily the first time but the customer doesn't come back. When a man buys

THE MARTIN-SENOUR PAINT
100 PER CENT PURE

once he is sure to buy it again for the label and the contents of the paint pail tell the same story—pure White Lead, Zinc and Linseed Oil—that's all but it's what makes The Martin-Senour Paint and it's what makes it a paying proposition for the dealer. Write for our special agency proposition. Do it today, we have something to say to you which will be to your advantage.

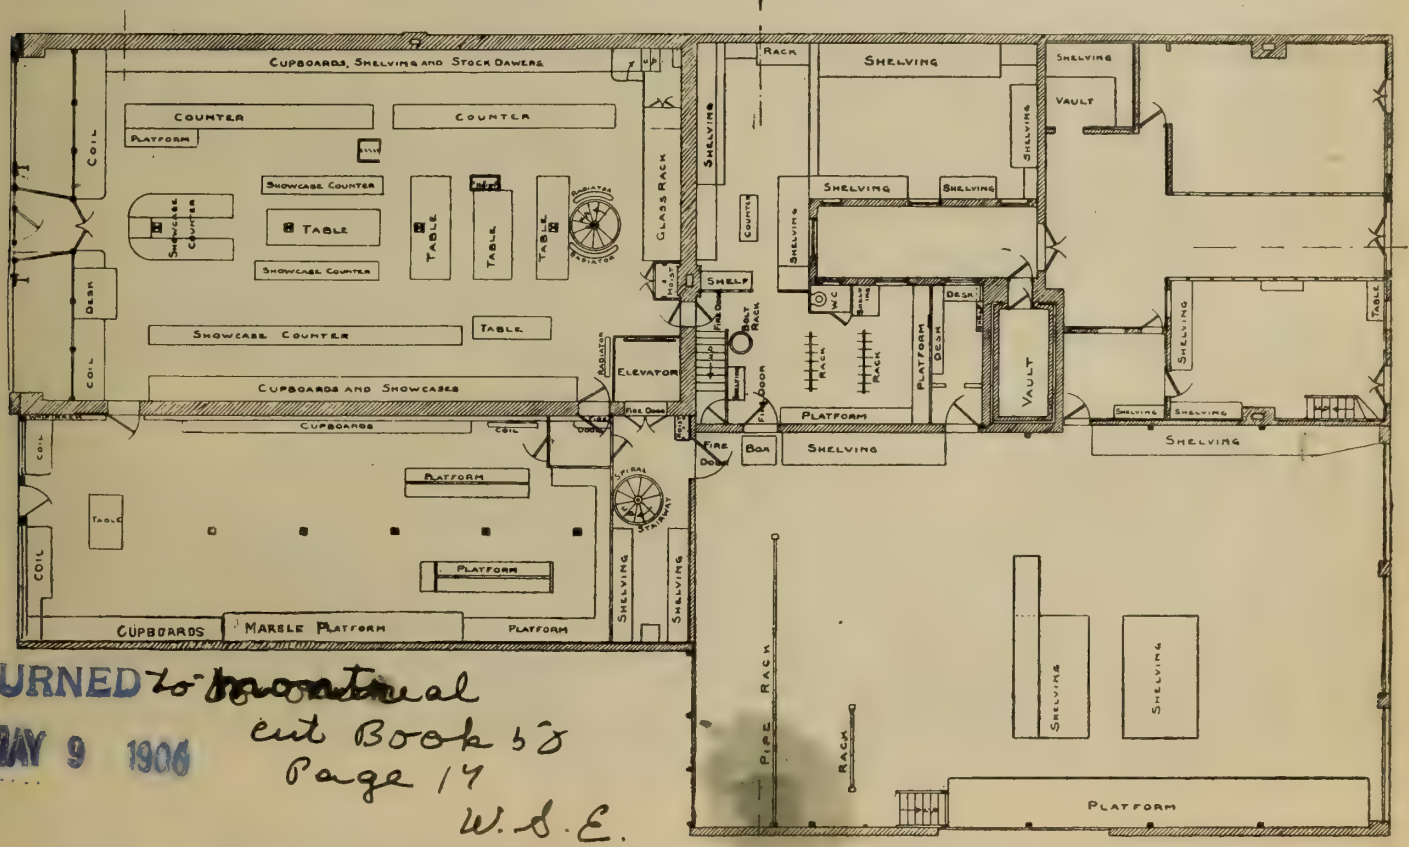
INTERIOR DISPLAY OF HARDWARE



Special Prize Article and Illustrations, showing the fine store of Amiot, Lecours and Lariviere, Montreal

To save the time of clerks and customers, to make the best use of space, to prevent the confusion attendant upon the initiation of new clerks, and to make it easy for them to find their bearings, should be the aim of every system of retail hardware store arrangement.

With these things in view, Amiot, Lecours & Lariviere, Inc., Montreal, have evolved a plan of interior display which has worked out to perfection in their own business. Its individuality is immediately apparent to every visitor, and it has none of the marks of a made-to-order system.

One of the most novel features is that right-hand side of the store is reserved for the tool department. In the showcase, samples are displayed on a sloping platform, which leaves space in the back of the case for storing the smaller articles shown, each behind its particular sample. Chisels, bits, etc., which are too large to be stored in this way, are placed along the wall, in small drawers enclosed in cupboards which exclude the dust and moisture. Each cupboard is distinguished by a letter and numeral, and the drawers, which are also numbered, are sub-divided into various compartments, where all goods of a kind are kept together. The drawers are 26 the necessary information regarding any article in the showcase which a customer may wish. Another advantage is that it is seen immediately when stock is low in any particular size or grade of any article, as these are kept in separate compartments according to classification. This both assists the buyer in making up his orders and greatly facilitates stock-taking, which is so tedious an operation in most stores. Besides the price books already mentioned, each cupboard is furnished with a tabulated price list of the goods it contains.

The centre of the store displays a number of lines to good advantage, a

RETURNED to Montreal

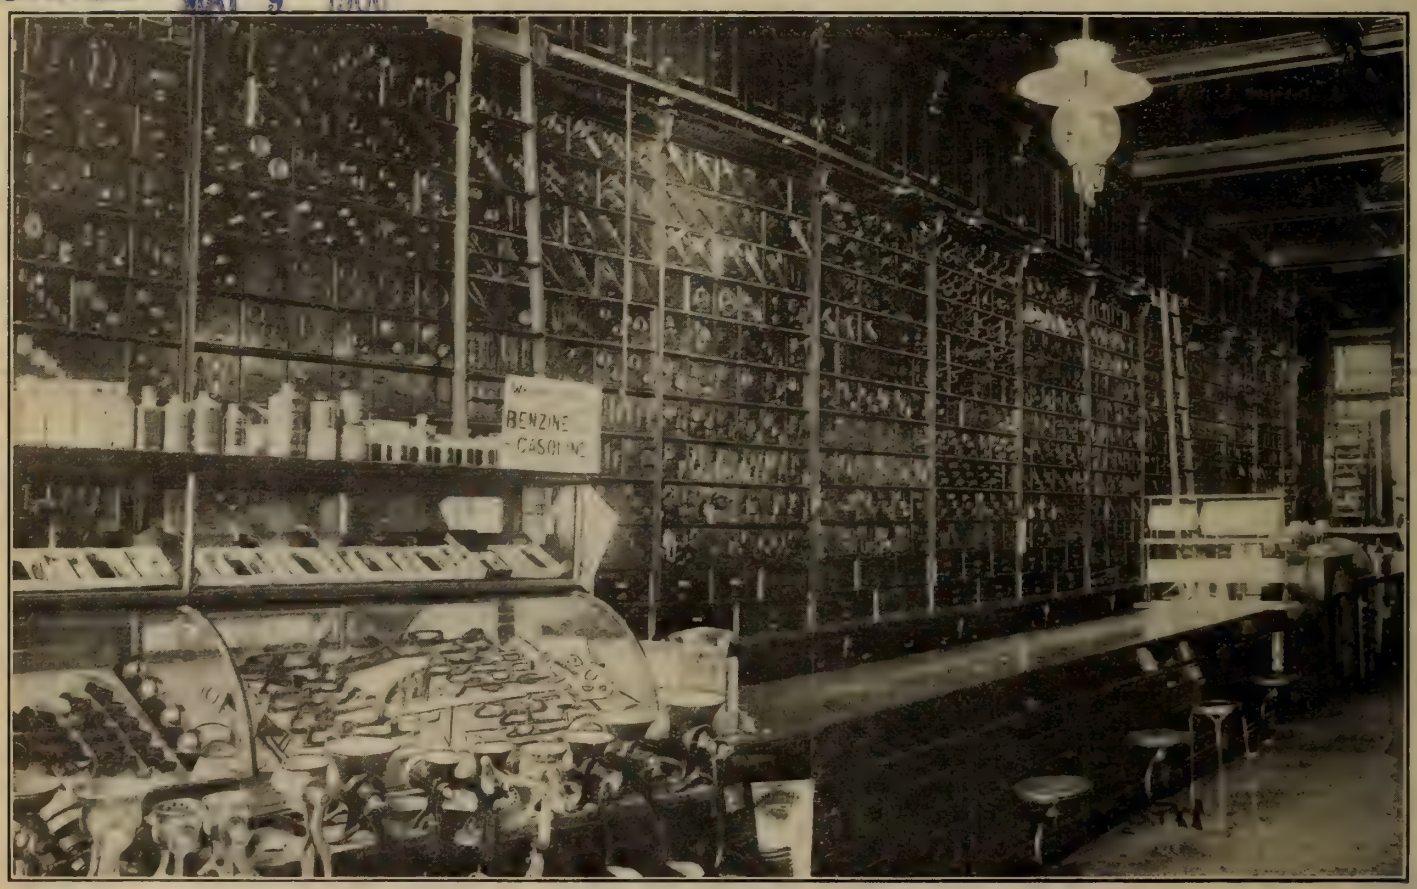
Cut Book 53
Page 14
W. D. E.

Ground plan, showing arrangement of the five buildings used by Amiot, Lecours & Lariviere (Inc.), Montreal, in their extensive wholesale and retail hardware and plumbing supply business. The main store building, shown in the upper left hand corner of the engraving, faces on St. Lawrence street. Commencing at the main entrance and following through the entire premises, it will be seen that everywhere the stock is admirably arranged for convenience in handling and selling.

nothing is suspended from the fine hardwood ceilings, to detract from the general good appearance, even bird cages being hung on brass bars which surround the columns. Another item of general arrangement that is contrary to the usual custom both in Canada and the United States is the absence of open shelves above the regular tiers of drawers or shelving. Instead, there is a continuous series of dust-proof cupboards, which not only keep the goods in better shape, but also add to the general appearance and utilize all available space.



The chief clerk's desk is in the immediate front, beside the door, and the inches long, 10½ inches wide, and only 2 inches deep, and they have great capacity while occupying but a small space. Of course the size of drawers and their sub-divisions may be altered to suit the class of goods contained in them.

Beside each sample in the showcase is a small tag bearing a number which refers to an entry in a neat loose-leaf price book placed on the showcase, where such items are included as cost and selling price and cupboard and drawer in which the goods are kept. This comprehensive system has been adopted in every department, so that even the most recent clerk can find, in an instant, all showcase on one side containing shaving mugs and brushes, razor straps and dog collars, while on the other side is perhaps the most ingenious silent salesman in the store, displaying the table cutlery, butcher knives and steels. In the immediate centre, between these two showcases, are tables with such goods as aluminum ware, graniteware, tinware and bird cages. The silent salesman for table cutlery of course employs the sloping platform, as is the case in other departments, but the back of this platform is equipped with grooves in which cards containing duplicate samples of the cutlery are held upright, thus allowing

easier access than drawers and also enabling the clerk to take in the whole array at a glance. This necessitates carrying a double stock of samples, but results have more than justified the departure.

The left-hand side is devoted to general shelf goods, and although the system here was adopted ten years ago, it would be hard to improve upon it even now. Goods are all carried in square drawers, with samples of their contents attached to the outside. As the drawers are all numbered it is impossible to misplace them and thus disturb the system. The drawers are all divided into compartments which are given over to the various sizes, each size having its own compartment. As the drawers are dustproof there is no need for paper wrappings, which facilitates the handling of

RETURNED MAY 9 1906

View of shelf boxes on one side of the retail department of the magnificent hardware store of Amiot, Lecours & Lariviere (Inc.), Montreal.

the goods. All the drawers show on the side written information as to the amount of over-stock carried, and other details.

The counter in the shelf goods department is equipped with shelves supporting tin boxes which have four sub-divisions where screws are kept. Each drawer contains only one size, but the four compartments are required in the quick-selling lines to accommodate flat and rounded heads in bright and brass finish. Stove bolts, washers and other such lines are subject to the same arrangement.

Some retailers complain about the cost of handling nails. In this store nails are put up beforehand (during slack hours) in 1, 2, 3 and 5-lb. packages, and are kept upstairs, where they do not interfere with the general display of goods. By sending his order through a speaking tube the clerk gets his package of nails on the small hoist, and the customer is served in a few seconds. Upstairs, the nails are stored in upright boxes with bottoms of galvanized iron so that they are easily handled.

Bulky goods such as shovels, forks, picks, etc., are stored on racks in an adjoining room, out of sight but very handy, and the paint department is also separate, being right behind the general sales room. Here dry colors are all done up beforehand in $\frac{1}{4}$, $\frac{1}{2}$, and 1-lb packages, while well-filled drawers are available when larger quantities are required. In ready-mixed paints, every size of every number has a part of a shelf to itself, and the chief clerk has but to run his eyes over the stock to see just where he stands. There is never any good reason for being sold out of any article.

Window glass is kept in racks, each size being in a separate place. An innovation is made in saving the strips and storing them in accordance with their length, without reference to their width. In this way the most economical cut is always made possible.

This system clearly carries out the maxim, "A place for everything and everything in its place." It was, of course, an expensive one to instal, but the saving in clerks' time and in losses of sales through shortage of stock and other causes has more than made up for the initial outlay. Furthermore, its chief advantage is that it gives a young man the best possible chance to learn the business.

In the wholesale department all the goods are laid in shelves on which there are white linen tags which indicate the kind and number of the goods which they are intended to contain. Our idea by so doing is to avoid new as well as old clerks losing time by having to refer to stock books every time they are receiving and selling goods for which there is scarce demand. FRED C. LARIVIERE.

THE ART OF MERCHANDISING.

Are you a "merchant," or simply a "dealer"? What is the difference? The difference is so great that it cannot be told in a sentence. A "dealer" is a man who runs a store because he can do that better than anything else, or thinks he can, or, perhaps, it is easier than something else.

He jogs along in a come-to-day and go-to-day fashion, eking out a living somehow. He pays his debts as long as he can and ultimately lets the sheriff run things to a finish.

For years, perhaps, he was at the store regularly every morning, and remained until the close of the day's business, but in every other way drifted with the tide. He buys goods and sells some of them after a fashion, and thinks that as long as a certain amount of goods are exchanged for money every year he is making money, whereas the reverse is usually the case.

He goes on the principle that the goods on the shelves and counters are worth so much to him, regardless of whether they were bought this year, last year, or several years ago.

He finds it necessary to buy goods continually, in order to keep up the

sales, and cannot understand why the clerks can not sell what goods they have instead of clamoring for new goods all the time. He has not studied merchandising deeply enough to understand that the intrinsic value of an article cuts no figure if the commercial value is lacking. He believes that because an article cost one dollar, he must get from one twenty-five to one fifty for it, or keep it, and he keeps on keeping his goods until they eat up their value in interest and insurance.

Turn Old Stock into Money.

If you belong to this class—and the cap fits too many—wake up to your actual condition! Make up your mind that when you next invoice your stock you will know what you are really worth, truly and honestly. You have been deceiving yourself long enough. Pull out of the drawers and take off shelves all the old stock you have and turn it into money. Get all you can out of it, but get it quickly. Merchandise is only worth what it will bring—not one cent more. If an article will not sell for one dollar, mark it fifty cents; if it still sticks at fifty cents, mark it twenty-five cents. It takes courage; but remember that is what you have lacked, or the goods would not now be with you.

There are times when it is profitable to make a loss. Sounds odd, doesn't it? But it saves you from making a greater loss later on, and you must be willing to take the medicine that will cure, or else go under with that disease known commercially, and usually diagnosed, as "dry rot."

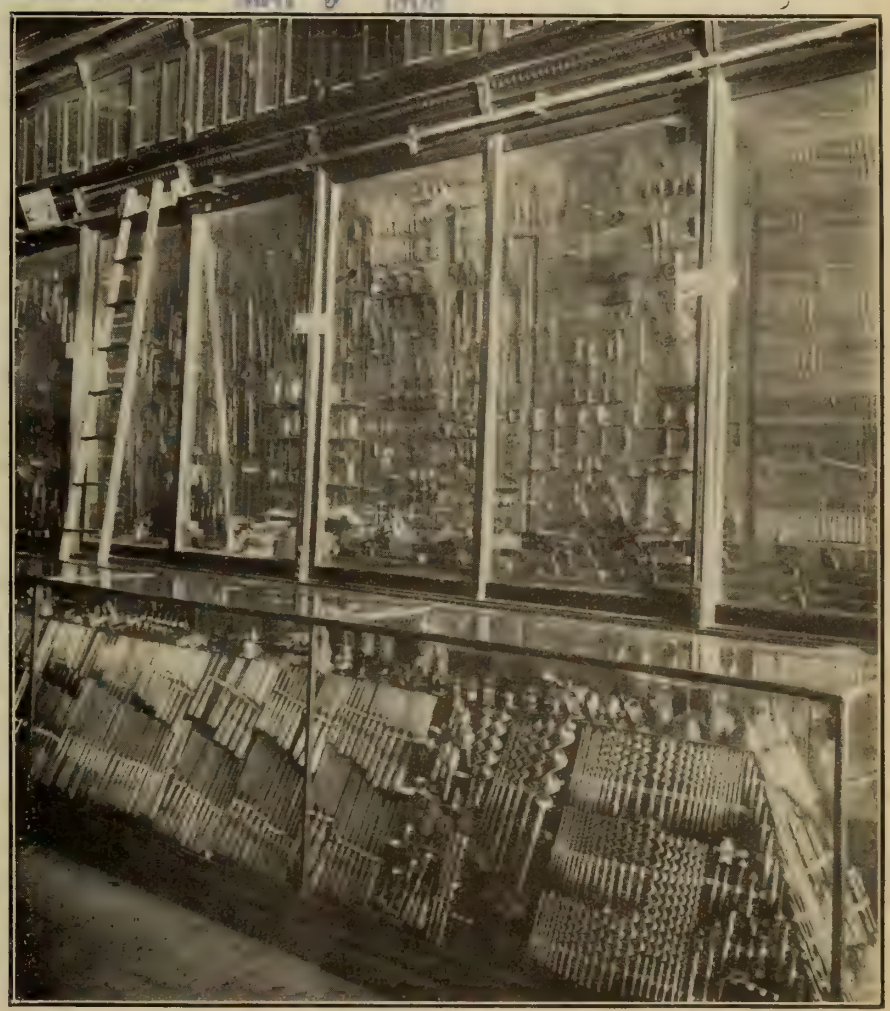
Few dealers realize the constantly increasing cost of portions of their stock, which is daily growing in amount, because original figures are adhered to as selling prices, regardless of the fact that certain articles have had their day.

Tied Up Capital.

Carrying a stock of dead or unsalable goods locks up so much capital that a dealer so situated finds it impossible to reap the benefits of cash discounts. His reputation for being a close buyer is lost; he pays longer prices for his goods; probably has to renew paper at maturity, and pay 7 per cent. interest, besides missing the plums that a traveler

A dealer who gets the reputation of "slow pay" is no longer sought by wholesalers when there are special bargains to be offered; for at such times only quick-paying buyers are appreciated. This difference frequently means that the dealer's competitors can sell certain goods and make reasonable profits at prices that represent actual cost to him.

Putting the knife into the prices of unsalable goods and getting rid of them is the only way to conduct a successful business. "The first loss is the best loss," and the smallest; yet, it is important to know the right time to take a loss and take it philosophically.



Solvent or Insolvent.

If your stock was put on the market to-morrow, how many men would pay more than 50c. on the dollar for it? Therefore although you have invoiced it at $24,000, it will only bring $12,000, and perhaps you have maturing liabilities of a like amount. Where do you stand? Simply on the sidewalk, perhaps at middle life, with your commercial career ended and life to begin anew.

The fact is, there is an unfilled vacancy in many large stores. There is need of a man who has a good knowledge of merchandise, who should have the authority, and make it his business, to keep stocks clean and saleable, and who should decide the proper time to take a loss on unsalable goods, also to decide at what price deteriorated lines should be invoiced for inventory.

The average proprietor, buyer, or manager, is so eager to make a satisfactory showing that he is tempted, and succumbs to temptation, to knowingly places before his quick-paying customers. over invoice his stock, thus deceiving himself with wide open eyes. Take down your stock at what it is worth; not at what it is marked. Wake up before it is too late and find out where you stand, and what your true balance is. Have you the necessary backbone to do it? Think it over and decide. If you haven't, get some one who has.

RETURNED MAY 9 1906

Sectional view of tool display silent salesmen and cases in Amiot, Lecours & Lariviere's modern hardware store in Montreal.

Ordering New Goods.

Goods should not be ordered in and displayed until the season for selling them is near at hand. Don't have goods come into your store months in advance of your requirements, even though a liberal dating is offered on them. You require to, or should, carry increased insurance on them, but the greatest drawback is that your salespeople lose enthusiasm in them before the season for selling arrives. Enthusiasm in the goods you have bought has a great deal to do with sales and profits.

How much more interest is manifested in goods the first day they are in stock than thirty days later; and, apparently, how much easier the merchandise is sold? Besides, your customers dropping in every week have very keen eyes, and quickly become acquainted with the stock. There is food for reflection here. Assimilate it!

The broad facts brought out, and to be impressed upon the mind of the merchant, are that he must try and select known, honest help, and give the greatest care to his business system; protect himself and his employes by having that system so strong and reliable that small chance can occur of saddling blame upon the wrong person. The discovery of theft of merchandise or money in a store should be followed by an immediate effort to locate the source of loss. The system, while it may not altogether guard against theft, should at least point in the direction of the thieves.

DON'T COPY COMPETITORS.

If you see something unusually good in a competitor's window, do not copy it. Just remember the idea and work it out your own way, improving it in every detail.

ONTARIO HARDWARE CONVENTION—MAY 15-16

Every Retail Hardware and Stove Dealer in Ontario is Invited to Attend.

That a retail hardware and stove dealers' association was required in Ontario has been amply proven by the marked interest being taken in the new organization formed on Good Friday. And that the coming convention to be held week after next is certain to be largely attended is well evidenced by the lengthy and rapidly growing list of firms already enrolled as members of the association.

After five or ten years of organization work the Retail Merchants' Association claim to have 150 hardwaremen as members in 112 towns in Ontario. The Retail Hardware and Stove Dealers' Association cannot claim that much. It has only been organized three weeks, yet it has already over 50 members in between 30 and 40 towns and cities, and if present indications count for anything there will be close on to 200 members in about 100 towns when the convention is called to order ten days hence. It is impossible to give a complete list of the number of members already enrolled, as Organizer Hodson's report for the current week has not yet been made. A partial list of the towns and cities from which members are enrolled or have signified their intention of being present at the coming convention is as follows :

Ailsa Craig.
Barrie.
Blenheim.
Bolton.
Bothwell.
Canfield.
Carleton Place.
Dundalk.
Dundas.
Embrun (Russell county).
Essex.
Glencoe.
Guelph.
Hamilton.
Harrow.
Kingsville.
Midland.
Mount Albert.
Mount Forest.
Newbury.
New Hamburg.
Oakville.
Oil Springs.
Parkhill.
St. Marys.
Sudbury.
Tillsonburg.
Thamesville.
Toronto.
Tottenham.
Trenton.
Verner (Nipissing).
Walkerville.
Waterloo.
Woodville.

Very few of the members in these towns have not sent in the provisional membership fee of $2 named by the executive committee, but a few have forwarded their signed applications without the fee, probably intending to attend to that part of the business at the convention. It will aid the secretary considerably, however, if all will forward their fees along with their applications.

All Have Membership Blanks.

During the past week every hardware and stove dealer in Ontario whose address could be obtained has been furnished with a blank membership card along with a circular announcing the convention. Already these are being signed and returned from all parts of the province, and while this is a busy season, every dealer should take the few moments necessary to fill in the card and send to the secretary with the membership fee, thus giving their moral support to the movement. Local associations have existed in various parts of Ontario at different times with varying results, but this is the first attempt yet made to form a provincial association by men outside of Toronto. Everything points towards success, but it must be recognized that failure now would put the work of organization back five or ten years. Let every dealer, therefore, who has not already enrolled give those who are willing to devote time and money the benefit of their moral support by enrolling at once. The time when co-operation is required is now—not when the association has made good and has a large membership. Don't wait for an organizer, don't wait for the convention, but enroll now !

Everyone Can Help.

The secretary paid a hurried visit to Dundas, Hamilton and Oakville on Tuesday of this week, and out of eight hardware and stove dealers he was able to see five enrolled as members and two of the remaining three promised to forward their applications before the convention met. This shows the value of personal work and shows how every hardwareman can help in the work of organization. If an association is a good thing for one it is a better thing for all. Call on the other hardware and stove dealers in your town and ask them to join the association. Point out that by getting together trade in unprofitable lines can be made profitable and that through organization numerous trade advantages can be secured and the semi-jobbing houses who sell to builders at even lower prices than the retailer can buy at will continue to grow stronger without an association to check their development.

Organizer Hodson reports that his greatest difficulty is in not finding the merchants at home when he calls. All he has seen are favorable and see the need of organization, but in some towns every dealer has been absent for the day. Let the merchants take up the matter themselves. Mr. Taylor, of Carleton Place, for instance, should make it a point to see every one of his competitors and ask them to fill in their applications. Mr. Taylor writes endorsing the action of the executive in placing Mr. Hodson in the field on such favorable terms and points out that "the eastern men have just as many troubles to contend with as their western brothers." He hopes that there will be a good representation from the east at the next convention.

Had the time between the conventions been a little longer the organizer would have been able to cover the entire province. This cannot be done, however, so it rests with the dealers themselves to not only send in their own applications but to get their near-by competitors to do likewise. This is a time for united action. Let each one do his part.

Delegates to be Banqueted.

One of the greatest advantages to be gained at conventions is the getting acquainted with others in the same trade and the exchange of ideas. Men competing for business in the same town or district naturally keep their ideas to themselves, but when dealers whose stores are far apart get together each can learn much from the other.

The publishers of Hardware and Metal have recognized the value of developing the social end of the tonvention gathering and are preparing to entertain their subscribers and the delegates to the convention at a banquet to be held on Tuesday evening, May 15, at the King Edward Hotel. The arrangements are not fully completed but each delegate is requested to keep the evening date open and come prepared to get acquainted with their fellow delegates and hear short addresses by representative manufacturers and jobbers holding official positions in their associations.

Another interesting feature in view is an automobile ride around the city on the afternoon of the second day.

Educational Addresses.

Educational addresses are also promised by representative hardware and stove dealers. It is proposed that one of the sessions of the convention be an "executive session," where the men in the trade can discuss trade evils among themselves with no reporters or outsiders present. As a feature of this session representative dealers have been asked to come prepared to deliver 10 or 15-minute addresses on : "Handling Goods Without Profit," "Mail Order Competition," "Some Price-Cutting Evils," "Modern Hardware Store Bookkeeping," "Importance of Window Display," "Stove Salesmanship," "Advantages of Organization," "Conducting a Business for Cash," "Why We Should be on Friendly Terms With Our Competitors," "Freight Over-charges," and "Hardware Store Advertising." Short discussion with a three or five-minute time limit will probably follow these addresses.

Special Hotel and Railway Rates.

Special arrangements have been made with the Eastern Canadian Passenger Association, comprising all the railways in Ontario, for special rates to Toronto for the convention. Any station agent can give the information as to how tickets can be procured, but briefly they are as follows :

If 300 are in attendance return trip is free. If fifty or more, one-third fare will be charged for the return trip.

Tickets cannot be bought more than three days prior to the opening of the convention (Sunday not counted). A standard certificate must be secured from the station agent with the ticket. Certificates will not be granted where the fare is less than fifty cents. Without a certificate no reduction in return fare will be given.

A special agent of the railways will be at the convention to sign return certificates allowing the reduced fare for return trip and a charge of 25 cents will be made for each one delegate securing a return ticket at the reduced rate.

Return tickets must be purchased within three days after the convention closes. No stop-overs will be allowed and return must be by the same route.

The Rossin House, King and York streets, Toronto, offers a special rate of $2 per day to delegates to the convention and other hotels can be procured at $1.50 per day. The Rossin House will be the convention headquarters and St. George's Hall, where the convention will be held, is easily reached from this hotel.

The Convention Arrangements.

The convention will be called to order promptly at 10 o'clock Tuesday morning and after an address of welcome by the mayor of Toronto, the president, secretary and executive committee will make their reports. Following this the convention will be in the hands of the delegates, the executive committee promising to recommend an order of business.

The convention will be a meeting of business men and every effort will be made to make every minute count. Dealers who do not attend will miss an event which is certain to live long in the memory of all who are on hand. Enough can be learned in the two days of the convention to more than repay the cost of attendance and each delegate will have the consciousness that he is building for the future betterment of the trade. Any dealer who can attend the convention and does not, cannot consider himself as being in the hardware business in earnest. Let "business" be the watchword at this convention—with an intermission for a social good time at the banquet in the evening. Let all unite in making the present convention and the association a success, and then look forward to an even larger gathering next Winter when the wives and daughters of the delegates can be brought along and entertained as well.

A CONVENTION "QUESTION BOX."

At hardware association conventions in the States one of the most interesting features is the "Question Box." Members send in questions for discussion before the convention and when that order of business arrives the questions are read out and discussed under a short time limit. As an illustration the following extracts are given from a report of the "Question Box" at the recent convention of the Illinois Retail Hardware and Stove Dealers' Association:

Question: "Is it a good proposition to sell stoves on the terms adopted by some of our city dealers of $1 down and $1 per week?"

President McKenney: I would like to ask Mr. Lawson of Rockford to answer that question.

Mr. Lawson: The proposition of our salesmen to our customers is to get one-half down and the balance in monthly payments.

* * *

Question: "Does it pay to invest in a cash register costing $200?"

Mr. Vorhees: A cash register is a benefit. A man knows at night exactly how much money he has taken in during the day and he knows whether there is any mistake made by his clerks. My cash register has three drawers and each clerk has a drawer. I recently purchased a cash register costing $450.

* * *

Question: "Does it pay a hardwareman to display five and ten cent articles in his store?"

A Delegate: I have considered that question a number of times and have nibbled at it a little bit, but we have always backed out and never did it.

Mr. Hurst: My idea is that it is not the right place in a hardware store for that class of goods. It would be my idea to sell what you can at a good profit. I don't know of a hardware store anywhere that has gone into that line of business.

* * *

Question: "Is it good business policy to make concessions in prices to farmers' clubs on staple articles?"

Mr. Smalley: In our country we have a very strong grange. They came to us many times and wanted us to make special prices, and we have not done it. They did the same thing on twine several years ago, and we turned them over to a twine company, and they sold them a carload of twine and they gave us a half a cent a pound commission, and we never touched it. I don't believe it is policy to cut the price of your regular stock to anybody unless you are going to give all your customers the same prices.

* * *

Question: "Is it more effective to handle and push one brand of goods than to carry several brands?"

Mr. Eckels: That is one thing that I am trying to do—I am trying to get a line of goods that no man in Decatur has; then they cannot tell me that they can go to John Smith and buy at ten cents less than my price.

* * *

Question: "Are not the expenses of running a retail hardware business more than the average merchant figures on, and do we properly consider the large number of articles sold on a narrow margin of profit and goods on which we have no choice, when we are marketing the general stock?"

Mr. Howe: Would it not be a good plan to devise some uniform system of keeping track of expenses so that we would know what it cost on an average for a hardwareman to do business? I think it the most important question on the list. I have a book which I have ruled. In the first column I have merchandise; the second column, freight; the next one, cartage and express, and another for wages. Our expense of doing business runs a little over 20 per cent.

Mr. Vorhees: I keep an expense account. Running the store myself I don't pay myself salary. I find the expense of doing business about 10 per cent. The amount of business a man does will cut some figure. The more business you do the less expense you have in proportion.

President McKenney: I would like to to ask Mr. Howe a question upon that point. Do you add a percentage to your inventory for freight as merchandise?"

Mr. Howe: In the course of the year I add to my inventory a percentage for freight, which is in proportion to the rate during the year I have paid. Of course that is not accurate, because on some goods the freight is allowed.

President McKenney: What do you consider a fair per cent.? For instance, if you have got a stock of $8,000, what per cent. for freight would you add to that?

Mr. Howe: My freight would be pretty near 5 per cent.

President McKenney: Would you consider 2 per cent. would be a fair proposition?

Mr. Howe: Two per cent. would be a little low.

Mr. Swanson: We figure a certain percentage and add that to the cost of our goods. When we take an inventory we know that everything is included.

Mr. Eckels: For ten years I worked for one of the best hardwaremen in Illinois, and when we got an invoice in we added 10 per cent. to it. That was to represent the expense of business, and then we put on our profit. That is the way I conduct my business to-day.

* * *

Question: "Should a merchant sell at the same price to everybody alike, or make a different price to different customers?"

Mr. Crissey: We have made it a practice for the last ten or twelve years to make one price only. We give 5 per cent. discount on stoves for cash. I will say further in figuring a bill for a building—anything of that kind—we give a little deduction.

* * *

Question: "Should a merchant make his remittances by local check or bank draft?"

Mr. Bittel: No dealer who has any bank account whatever should be asked to pay exchange on drafts.

* * *

Question: "Has any good come out of your hardware association?"

Grant Porter: I don't think it needs any answer. The fact that we are here is enough proof that there is good coming out of it—in the increased membership during the year.

Window and Interior Displays

SHOW WINDOW ADVERTISING.

There are two extremes in the treatment of the show window—indifference and over-trimming, says the Hardware Trade. The one is a result of neglect of its opportunities and produces a shiftless display; the other arises from an impractical idea of the window's purpose and crowds the window with a various display of all the "fancy" looking goods in the store, arranged solely with regard to appearances. This latter form is far preferable, of course, and is in place on certain occasions, such as a store opening.

The true business use of a show window, however, is to make it a factor in the sale of goods, and while this style of trimming will do something in that direction, much more can be accomplished by other methods.

The window should be changed frequently, which will not be done when no pains are taken in its care or where the displays are excessively elaborate. One change each week is not too often, and perhaps about as often as it can be managed ordinarily. The first reason for this is to maintain a clean appearance. After a few days the glass becomes smoky or fly-specked, dust accumulates, and the display loses its fresh appearance, and if left longer it will soon be repellant in effect rather than attractive.

The bulk of customers are the people who pass the store every day or so, and after one observation the window loses its power of drawing attention. Unless there be a moving or changeable object in the window they will not stop to look again.

Variety is Important.

There is no virtue here in repetition. Think a minute and see if this isn't so. Don't you, when pasing a store, notice from the corner of an eye whether the display is different from what it was yesterday, or the day before? Should the goods displayed be anything in which you are interested, then you stop for a more careful inspection.

Confine the display, as a rule, to one line of goods; often to one article. It is possible to have so many different things in the display as to scatter the attention of the customer and fail to impress him with anything. Centralize the attack and make a forcible presentation of whatever is shown.

Spend more thought over the matter of what to put in the display than over the intricate design that can be made from it. An original form of arranging the goods is always attractive, but so long as the display is neat and orderly it will be of service, provided seasonable and appropriate goods are selected.

Definite suggestions as to what to display can hardly be given, for that is largely a matter of circumstance, but certain lines of goods are available at certain times during the year at which they need to be made prominent.

An Australian Hardware Window.

TROLLEY CAR IN WINDOW.

A trolley car fashioned out of articles regularly carried in stock was used as a show window exhibit by an Iowa store recently and attracted much attention from passers-by. The car was 5 1-2 feet long, 2 feet wide and 5 1-2 feet high. The frame consisted of squares put together with 7 x 9 shelf brackets and fastened with tea kettle knobs and quilting frame clamps. The front was formed with web saw blades and the roof of buck saw blades. The eaves were made of drip strips folded over and short pieces soldered on and hooked over the top of the frame. Drip pans formed the centre piece on the roof. The trolley pole was a cane pole fastened with a spring hinge, a screw pulley supplying the trolley wheel. Foot mats furnished the car floor and the seats consisted of .16 gauge shells for legs and glass for bottoms. The backs were also .16 gauge shells, the ends and middle arms being cartridges. The car fender was formed out of sand screen. The brake was an egg beater and the motor lever a window catch surmounting a cream whip. The rods from which the hand straps hung were floor brush handles and the straps were safety chain. The side steps were buck saw blades supported by drip strips. Eight-inch pot covers supplied the wheels and speaking tubes the axles. The hubs were oil can caps. The frame of the car was set upon tin bread pans. The vehicle was fully equipped with electric lights and was attractively trimmed with brass safety chain.

AN AUSTRALIAN WINDOW DISPLAY.

Through the courtesy of the Australian Hardware and Machinery we are able to reproduce an illustration of a window display made by a hardware store in Australia last October. The battleship is constructed almost entirely of stock materials and following the excitement caused by the Russian-Japanese war, attracted a great deal of attention.

WINDOW ATTRACTIONS.

An English hardwareman recently drew large crowds by showing the figure of a man shaving himself with a safety razor. The working model brandishes an ordinary razor in its right hand, while in the left is the safety appliance. A close examination of the figure reveals the fact that the safety razor does not actually touch the face of the waxen counterfeit, but to the casual passer-by the action is sufficiently realistic to give the impression that for those who are inexpert in the art of shaving with a full-size, unprotected blade the safety device on view is the very thing for their purpose. The exhibit is decidedly novel, and worth the attention of dealers in cutlery who are on the look-out for a window attraction.

Keep your store looking as if it were a place of business.

STOVES AND TINWARE

STOVES FOR SUMMER USE.

With the opening of Spring and the anticipation of the coming sultry days of Summer there ought to be a good business done in oil and gasoline stoves, for the demand for this class of cookers has steadily grown during the past few years. Their use has become a necessity if the health and comfort of those who perform the household duties are considered at all.

Stove demonstrations when given by competent persons are an excellent method of increasing sales. The demonstration should be given by one who is able to make a creditable showing, for if a stove cannot be made to "work" just when it is supposed to do its best the exhibition had better not been given.

Canadian manufacturers have turned out some excellent oil and gasoline stoves for this year, and are anxious to make their merits known through the agency of pamphlets and other advertising matter to help the retailer in making known the worth of the goods. Advertising matter that is convincingly gotten up for free distribution, when accompanied by a personal letter from the dealer serves the purpose of both maker and seller. Of course there are bound to be some circulars that, like the seed in the parable of the sower, will fall upon barren ground, but there will be others that will bring forth fifty and a hundred-fold when dropped in the right place.

With the sale of an oil or gasoline stove there is the opportunity of getting the Winter heaters for storage, and perhaps supplying a few repairs, for usually there are some breakages during the Winter. These parts should be ordered at once while fresh in the mind and not left over until Fall when the stoves are needed again. Many dealers find it a business getter to have a place where these stoves can be stored during the Summer months. Besides the remuneration received for labor and storage there is the connection formed by being on the ground floor, so to speak, when the stove question comes up again.

AIR BOX FOR STOVES.

Miss B. J. Monat, South Dunedin, New Zealand, has invented a novel device which is applicable to ranges, stoves, and open grates, and which aims to provide a better control of the draft than has heretofore been possible, thus effecting a saving in fuel. The device has the form of a box, smaller at the top than at the bottom. The rear of the box is left open, while the other three sides are formed of inclined walls provided with long vertical apertures. The bottom of the box is provided with a sliding plate, the purpose of which will be presently explained. The air box, as the device is termed, is placed on the grate of a stove, to which it is secured by means of bolts. It thus takes up most of the space usually occupied by the fuel. The rear of the air box fits closely against the rear wall of the firebox, but a narrow space is left on the other three sides to receive the fuel. By this means the area of the fire is greatly increased, while the depth is reduced. Air passes up from the grate into the box and thence through the apertures to the fire. The plate at the bottom of the air box serves as a damper which can be moved in or out to control the amount of air fed to the fire. Owing to the shallowness of the fire and the general distribution of air, a perfect combustion of the fuel is assured. In proof of the value of the air box it is pointed out that there is a material reduction in the amount of smoke from a stove supplied with this device.

WELSH TIN PLATE INDUSTRY.

London Commercial Intelligence, in a report on the tin plate industry in South Wales, says the tin plate trade seems to be going from bad to worse. American competition is being severely felt, and though some of the Welsh makers are quoting under cost price to secure Canadian orders, they are being undersold to the extent of about 6d. per box, with the result that American deliveries into Canada are going up by leaps and bounds. In other markets, too, the Americans are entering into fierce competition with the Welsh makers, it being reported that the quantity of tin plates on which the United States Government allowed drawback during the fiscal year was 151,677,870 pounds, an aggregate which has only been beaten twice before.

FURNACES IN THE COUNTRY.

The building season now open is a good time to look up prospects for furnace installation. In small towns and country places many houses are built, the owners of which have not considered the advisability of putting in a furnace, but who could be induced to do so. The furnace business is one that can be worked up considerably with the exercise of some attention on the part of the dealer in keeping in touch with prospective builders.

There is some hesitation in installing a furnace by those who have not had practical experience, and when the matter of figuring and laying out comes up, they do not feel like going in for it. While it requires some knowledge and skill to successfully put in a heating system, the usual principles of heating, with the addition of some details, are followed out in furnace work as in other work. In this connection it should not be forgotten that the manufacturer is always ready and willing to give any information that may be required in figuring and laying out, so that the worry to a great extent can be taken off the dealer's hands. In such cases it would be wise to send blue prints or plans of the house to be heated to the manufacturer of the furnace, who has always in his employ those who are skilled in this class of work.

THE SUCCESSFUL STOVE SALESMAN.

The selling of stoves is an art, with features peculiar to itself, said Charles W. Connor, of Minneapolis, in an address before the Hardware Dealers' Association convention of that state.

Stoves have an individuality, and the question of reputation and meritorious features are potent factors in their sale. For the same reasons, the selling of stoves is necessarily an agency business, and as a result it is rarely the case that a certain line of stoves is handled by more than one merchant in each town. Being limited to but one customer in a town, the stove salesman is confronted with conditions which are not met with by salesmen whose wares may be sold to an unlimited number of merchants. He therefore must be possessed of sound judgment, and use care in the selection of his agent, not only from a credit standpoint, but also with a view of selecting an agent who is in a position to handle the greatest quantity of his goods. To attain this end the successful stove salesman must be possessed of the qualities which will enable him to command the attention, respect and confidence of the merchant whom he wishes to interest in his goods, and having placed his line, he must deport himself in such a manner that he will retain the respect, confidence and good will of his customer. To this end he should never make a statement which cannot be borne out by facts, and should be careful in all his transactions to have everything so clear that a misunderstanding cannot possibly occur. He must be particularly careful in making out his orders to have every item pertaining to prices and terms, etc., clearly and specifically stated, and under no circumstances have any agreement or understanding that is not so stated in writing in his order.

The successful stove salesman will have a thorough knowledge of his own goods, and be thoroughly familiar with the stoves he meets in competition, at the same time never referring to a competitor's line unless absolutely obliged to do so, and under no circumstances will he speak of a competitor's goods in a disparaging manner.

In my opinion the successful stove salesman is born, not made, although a certain amount of education, experience and proper training is necessary to develop the faculties which he may possess to bring out his full force and efficiency. The successful observant stove salesman through coming in contact with a great number of merchants, will pick up ideas which will assist in the sales of goods, and will gain the good will and friendship of his customers, by imparting knowledge thus acquired, besides taking pains to explain fully and in every detail the selling features of his particular line of goods, especially new productions as they are brought on the market.

The successful stove salesman should ascertain what are the possibilities of sales, etc., and requirements of his customer, and be cognizant of the same when selling him, and never wilfully guilty of selling him more goods than he can dispose of during the season under normal conditions, as by so doing it will react against him, and thereby lose him the confidence and respect so necessary in these days of a successful business life.

The Pouch Feed, to be Found Solely on Royal Stoves and Ranges, is the Best-Selling Feature that any Stove or Range Ever Possessed.

Have you given a second's thought as to just what the **Pouch Feed** is? How it sells the stove or range on sight and piles up the satisfaction account? If you haven't, it's because business has prevented you. It's not like a stove dealer to be disinterested in the things that mean **big interest** for his money.

The Pouch Feed was ushered in so that a lot of trouble, in the form of unnecessary exercise of hands, might be ushered out. The busy wife on washday doesn't want to be "tugging away" at a boiling hot boiler simply that she may be enabled to add a little fuel and give the fire the necessary "stir." But in all stoves and ranges except

Royal Stoves and Ranges

she has to do it or let the fire go out. **The Pouch Feed is a "mouth" that takes in coal because it has the proper "slant" and proper dimensions.** It's too greedy to allow any coal to drop to the floor, **and as a broiler it's ideal.**

You will perhaps say: "but all stoves and ranges have the 'Top Door' or 'Check Draft' where coal can be 'squeezed' in and broiling done." Mr. Dealer, a Top Door is **not** a Pouch Feed; **squeezing in** coal is a "job," while "putting" in coal is a "pleasure;" and "burning" meat is **not** "broiling" it. No sir, old Top Door won't eat coal. He gives it to the ash-pan. But he will do one thing—he'll burn your hand if you get into a "broil" with him.

WORK FOR HARDWARE ASSOCIATION.

The demand made by the recently organized Postmasters' Association that postmasters be granted permission to sell lists of names of persons receiving mail at their offices to department stores, mail order houses and patent medicine concerns, is something that requires prompt action on the part of the Retail Hardware and Stove Dealers' Associations of Western Canada and Ontario. The demand was first made by the western postmasters, but has since been renewed by a convention of Ontario postmasters.

A strong resolution protesting against this demand should be adopted at the convention in Toronto on May 15 and 16 and the matter should be followed up by letters of protest to the Postmaster-General as well as bringing the matter to the attention of the members of Parliament. If the Postmaster-General receives a thousand letters of protest the proposition will undoubtedly be squelched. To make certain, however, every merchant should also ask the member for his constituency to use his influence with the Postmaster-General against the scheme.

The postmasters have a perfect right to organize to better their conditions. Through organization they can remedy many evils under which they suffer. But their decision to sell their brother merchants in their home towns for the mail order house's thirty pieces of silver cannot but meet with universal condemnation. Carry the protest to the postmasters themselves and let them join in having the demand withdrawn.

BENEFITS OF ORGANIZATION.

Speaking of the work of retail organization being aggressively pushed in the Western States, the Hardware Trade, of St. Paul, points out that it is up to the country retailer to organize his town and his county. Association with his fellow merchants and the merchants of other cities broadens the retailer. He finds in the exchange of suggestions, different methods of doing business, different ways of meeting trade evils and helpful methods in the conduct of his affairs.

County associations are doing excellent work bringing new members into line, looking after dead beats and slow pays, collecting delinquent accounts, bringing about harmony and unity in action in towns and preventing merchants from entering upon ruinous competition and from making serious losses in many ways.

Your competitor is perhaps a decent fellow. Like you, he is in business to make a living and he has a perfect right to meet you in open competition. He has his troubles just as you do. He has slow pay customers and customers who never pay. He has to meet catalogue competition. Sometimes he is overstocked with unsalable goods just as you may be, and this is all the more reason why you should get together and work in harmony rather than be practically enemies.

Get together and rub shoulders with each other and you will find that your competitor is a good fellow like yourself. Together you may be able to bring in the third and the third may get the fourth, and in this way all may be working in harmony. Better try it.

AMERICAN JOBBERS FOUND TRUE.

An Indiana hardware merchant who recently attended the convention of the National Hardware Association was impressed with the assurances given the retailers that the jobbers would under no conditions sell goods to any but recognized hardware merchants. He resolved to test the matter and on his return home induced a friend not in business and having no commercial rating, to send orders to hardware jobbers in St. Louis, Chicago, Louisville, Cincinnati, Indianapolis and Philadelphia. The Philadelphia house was the only one to fill the order, they sending by express half a dozen Yale padlocks, billing at dealers' price.

When their representative called on the dealer a week or so after, for the first time in years he left without an order. He immediately took the matter up with his house, saying he considered their action a breach of faith to him. The jobbing house replied that a mistake must have been made and promised to investigate the complaint immediately. They did so and made the following statement:

"Our filling this order was contrary to the principles that govern our business. We have sacrificed millions of business (by many considered legitimate) by refusing to sell railroads, manufacturers, contractors and others who desired hardware for their own use and not to sell again. We are very much surprised to find such an order as this slipped through. Investigation reveals:

"The order does not look like one that a farmer, mechanic, or consumer would write. It is written and composed as a dealer would write it, and was received at a time when our credit man was absent, being at the bedside of a dying mother. An assistant looked it up, noted "no rating" in Dunn or Bradstreet, and stamped it "new order." Several of the office force were sick, and this coming through with a large number of others, passed without exciting suspicion. The fact that it was ordered by express indicated the locks were urgently needed. The amount being small, it received only cursory notice. This is the first instance of this kind coming to the writer's attention. None of us is infallible. That errors may occur we feel any reasonable, fair-minded hardwareman will admit. We do claim, however, no house can justly claim fewer breaks of this kind."

All the other jobbers wrote that they confined their business to the retail trade and advised consulting their local dealers. That one jobber sent the goods is not sufficient reason to believe their policy is different. In the multitude of transactions that make up a jobber's business some single case should not be considered as proving general unfairness.

If the test had been tried in Canada would the result have been so satisfactory? If not there is need for a retail hardware association in every province.

THE UNIVERSITY ACT.

In the provisions of the University Act, which is now being considered by the Legislature of the Province of Ontario, it is gratifying to note an honest attempt to solve a question which has for too long a period been neglected or minimized. It has now been undertaken aggressively, and the present bill follows with fair exactness the recommendations made in the report of the University Commission recently issued.

The main features of the new legislation are the arrangements which have been made to guarantee the harmonious government of the university's business and academic interests, and to provide sufficient revenue for current expenses.

For the government of the institution it would, at first sight, seem that a multiplicity of bodies have been created, whose powers and privileges might in practice overlap. But in reality there is a distinct division of duties, the business management being quite separate from the academic.

The most important body is the board, to be known as "The Governors of the University of Toronto." They are to be the successors of the present trustees, but with enlarged rights, powers and privileges, including the government, conduct, management and control of the university, and of its property, revenues, business and affairs. Among the powers of the board may be mentioned the appointment of the president of the university, the principal of University College, and the deans of the various faculties; the erection of necessary buildings, and the alteration (if it should be deemed expedient) of any other body except the senate. The board will consist of the chancellor and president of the university, and thirteen persons appointed by the Lieutenant-Governor in Council. These latter will hold office for six years.

The senate will manage the academic affairs of the university, and among its members will be a generous representation of the graduates, with four representatives of the high school and collegiate institute teachers of the province. Both appointed and elected members will hold office for four years.

Convocation will be a body consisting of all graduates of the University of Toronto and federated universities. It may meet at the call of the chancellor to consider questions affecting the well-being of the university, and make representations to the board and senate.

The council of the faculty of arts is a body which, practically speaking, advises the senate upon the conduct of academic affairs within its own sphere. Although really managing the examinations for the faculty of arts, it looks to the senate for final approval. There is a similar council for all the other faculties and also for University College.

Perhaps the most radical change proposed is the new body to be known as the caput, which will consist of the president, principal of University College, heads of the federated colleges and universities, and deans of the faculties. The caput is to exercise powers as to discipline, and to deal with all such matters as may be assigned to it by the board or senate. It may also advise the president.

The ornamental head of the university is, as now, to be the chancellor, who will be elected by the graduates. He is to hold office for four years.

Finally, there is the president, who is to be, in fact as well as in name, the chief executive officer of the university. He will have general supervision over academic work, will be a member of all faculty councils, and chairman of the senate. It will, moreover, be his duty to confer degrees, in the absence of the chancellor, to suspend, if necessary, any member of the teaching staff of the university or University College, to make recommendations to the board as to all appointments, promotions and removals, and to report annually upon progress and efficiency of academic work.

Another aspect of the new bill which will meet with commendation is the encouragement that is being given the newly federated Trinity College to take up quarters in Queen's Park. It is to be hoped that this will soon be accomplished.

All these provisions are of great interest to the students, graduates and intending students of the university. But the entire province will be concerned, and, it is hoped, gratified by the financial arrangements proposed, by which the university will be placed on a much more secure basis than before. A certain number of acres (as yet undetermined) of public lands will be set aside as a permanent endowment, and a certain proportion of the average yearly gross revenue from succession dues, to provide for the maintenance and support of the university and University College.

For their effort to meet squarely the problem of higher education, and to improve the status of the provincial university, academically and financially, the Ontario Government are to be congratulated.

WHO PAYS THE SHOT?

Toronto's post office fire has raised the question of responsibility for losses incurred by the destruction of registered letters. Fortunately no registered mail fed this blaze, but there remains the omnipresent If. The Government has always disclaimed responsibility for lost, destroyed or stolen registered mail; the issue, therefore, is between the addressor and the addressee.

It is a postal regulation that as soon as a letter or any postal matter is mailed it becomes the property of the person to whom it is addressed. So if you vent a hasty spleen on paper and mail it, then think better of it, you cannot get it back, unless, perchance, you misdirect it and it comes to you in time through the medium of the postal graveyard.

Two prominent wholesalers, a grocer and a draper, gave the daily press interviews on the subject and both left the loss at the door of the wholesale house, presuming the destruction of a registered letter by which a customer had remitted money. J. W. Woods, of the Gordon, Mackay Co., said that in view of the postal regulation he thought the wholesaler would be responsible for letters mailed to him because once mailed they became his property. Hugh Blain, of the Eby, Blain Co., said: "In case the letter was registered we could hardly ask the customer to pay twice even had we the right to do so."

The wholesalers are not at all unanimous in that view and there are two very obvious reasons against it. It would open up a large field for fraud, and the sender has absolutely safe methods of transmitting money if he chooses to avail himself of them.

After the fire a postal official said: "The post office is not responsible for the delivery of money sent by registered letter. If it were, a large field for fraud would be opened up." The same would be true if anyone other than the sender was to be held responsible, because only the sender knows how much or if any money at all is in a letter. When a letter is registered the post office gives a receipt for it, but it doesn't know or care how much money there is in it. If the addressee is to be held responsible, then the addressor should be required to bring the money to the post office and place it in the letter in the presence of the official, getting a receipt not only for the letter but for the amount.

But why send money by registered letter at all? There are three absolutely safe means of remitting, by check, by postal money order or postal note, and by express order. If a dealer has a bank account, why, of course, that is the easiest avenue of liquidation and has the pleasant advantage of leaving the wholesaler to pay the exchange, an eighth, a tenth or a sixteenth of one per cent., according to the amount and the intimacy of one's relations with the bank. But the minimum is 15 cents, and for small amounts that is dearer than by money order or express order. The express and money order rates are the same. With these safe methods to choose from, where neither fire nor quake can destroy nor thieves break in and steal, why should anyone else be responsible if a man chooses to send his money by registered letter?

The moral of it all is, adopt modern methods of business; keep up with the game; and it applies quite as aptly to buying goods and to selling goods as to paying for them.

Door checks are a thing much needed, but little used. Why not run a good line and show people the benefit of them? They are just the thing for the Summertime.

ASSIGNMENT NOT JUSTIFIED.

W. J. McKissock, of Strathavon, near Owen Sound, farmer and general merchant, assigned recently to Osler Wade, assignee, acting for an important Toronto dry goods house. His assets amounted to $8,991.64, and his liabilities to $5,468.65, leaving a surplus of $3,522.99.

Why did he assign?

He had sent a letter to several of his creditors stating he would have to have an extension or they might come and take the stock. His replies came in the form of representatives of two assignees. Mr. Wade's man was first, because he moved faster, and it may be guessed, he did not twiddle his thumbs long before securing the assignment.

When the creditors met in Toronto the wholesale firm which had initiated the proceedings were surprised at the solvent condition of the estate. They were sorry the assignment had been made. An Owen Sound creditor objected that the assignment should not have been made, and the representative of the Toronto house agreed with him.

Mr. McKissock, who had started the store two years ago, had a $4,000 stock, a $3,700 farm, and did business in a year equal to about the value of his stock. That turnover could not make the business pay. The Toronto man said to the Owen Sounder: "Guarantee us our account, $520, and we will pay the expenses of the assignment thus far incurred."

The north country man could not see his way to do that, so the trade creditors agreed to take 85 cents on the dollar. The total expenses of the assignment will be about $125, and the 15 cents more than make that good. The local creditors undertake to see the trade creditors paid by March 1st, and the estate has been handed back.

A little enquiry by the wholesalers would have prevented this assignment, and a lot of trouble and worry. It was easier, however, to hand the merchant's letter to an assignee. The fact that Mr. McKissock was not displaying keen business acumen should have inspired consideration rather than peremptory measures. The wholesalers did not mean to be harsh; they just didn't think. They did what was customary.

This case should suggest that a little investigation, or at least enquiry, precede instructions to an assignee.

If you sell paint, keep your own store brightened up with it.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 24.

A hardwareman through and through is Mr. S. E. Waffle, who represents Alex. McArthur & Co., paper manufacturers, in Ontario and the Eastern Townships. For over twenty-one years he has been connected with the hardware trade, and it would be superfluous to say that he knows it thoroughly.

Mr. Waffle's first hardware experience was gained in Dresden, Ontario, with the old firm McVean & McVean, who presided over "The Big Axe" hardware store. Later he went to Elmvale, where for seven years he held a position in the hardware store of R. Peters.

S. E. Waffle,
Representing Alex. McArthur & Co., Montreal, in Ontario and Eastern Townships.

After serving in the retail trade for twelve years, Mr. Waffle was chosen for a vacancy on the traveling staff of the J. F. Pease Furnace Company. In representing this firm in Northwestern Ontario, he met with encouraging success for two years, when he was appointed to his present position with Alex. McArthur & Co., the Montreal paper manufacturers. For some time his territory extended as far as Winnipeg in the west, and Newfoundland in the east, but he now covers only Ontario and the Eastern Townships.

Mr. Waffle makes Smith's Falls his home, and he has resided there for the past three years, as he finds it convenient to the greater part of his territory. He is quite enthusiastic over the prospects of the town as an industrial centre, referring to it as the "Manchester of Eastern Ontario."

Mr. Waffle is so well-known in the trade that his likeness on this page will be recognized by the great majority of our readers.

RENTING CEMENT BLOCK MACHINES.

The renting of cement block making machines is an innovation that should prove profitable to hardwaremen. Cement blocks, from the ease with which they are used in construction, have made for themselves a place in the building world, and there is no doubt that they would become even more popular were the process of manufacture brought within easy reach of the individual who contemplates building. Particularly would this be the case with the farmer, who does most of his own building. An outbuilding of some kind is desired, and often cement blocks seem to be just the thing required, and would be used were it not for the cost of purchasing the blocks or the machine to make them, and unless a man goes into building extensively, he does not care to buy a machine outright.

In the removal of this difficulty one of our advertisers has shown great enterprise in manufacturing a machine that is easily portable, and can be operated by anyone. These machines are sold to hardwaremen, who rent them out to the man about to build, but who does not care to buy an outfit. The machine in this way will soon earn enough to pay for itself, and with ordinary care will be little the worse for wear.

This seems to be a line that should appeal to every hardwareman, for he not only receives the rental of the machine, but also the sale of cement. There is the probability, too, that some hardware will be required for the building in the way of paper, locks, glass, etc., so that quite a little business could be done that might otherwise be diverted into other channels.

There need be no hesitancy in making cement blocks. The process is simple, and the ingredients known to everyone. Cement blocks and concrete construction have come to stay, and as these machines and the material is essentially a hardwareman's business, it is a thing worth looking into.

The carrying of a few jack-screws for renting has usually been of benefit to the dealer, both in the rental and in the other business done in connection therewith, and there is no doubt that one or two cement block machines would also be a valuable acquisition to the hardwareman's stock-in-trade.

HARDWARE TRADE GOSSIP

Ontario.

Dreany Bros. have opened up a new hardware store at Cobalt.

A. Rogers, plumber, of Hamilton, was in Toronto during the week.

S. Norfolk, Pembroke, has started in the hardware business at Haileybury.

Charlton & Wilson have opened up a new hardware business at Haileybury.

T. S. Hobbs, of the Hobbs Hardware Co., London, was in Toronto during the week.

G. B. Dowswell, of the Dowswell Manufacturing Co., was in Toronto during the week.

Montgomery & Ferguson, late of Kingston, have opened up a hardware store at Haileybury.

Ald. Hugh Wallace, plumber, of Hamilton, spent a day or two in Toronto during the week.

W. A. C. Hamilton, of the Consumers' Cordage Co., Montreal, was in Toronto during the week.

R. W. Cherry, Russell, hardware and implement dealer, has disposed of his hardware business.

C. L. Burton, of the Fancy Goods Co., Toronto, was in New York for a day or two during the past week.

Harold A. Wilson, sporting goods dealer, of Toronto, was in New York the early part of the week.

Mr. Kelly, representing the Penberthy Injector Company, Windsor, was a visitor in Toronto this week.

Howard & Hawkins, who were formerly clerks at Pembroke, have opened a hardware store at Latchford.

Geo. J. B. Ramsden, of the J. H. Still Manufacturing Co., St. Thomas, was in Toronto during the week.

A. E. Ripley has retired from the Ottawa Paint Works. Business will be continued by remaining partners.

Fred Somerville, manager of the Ontario Lead & Wire Co., Toronto, will return from Europe about May 15.

The St. Catharines master plumbers have signed an agreement to give their men a minimum of 30 cents an hour.

T. L. Cooke, who recently bought out McGee's hardware store at Fenelon Falls, has established a branch at Coboconk.

Hinners, Fielder & Johnston have started in the business of electrical contractors and supply dealers in Fort William.

Thomas Young, jr., hardware dealer, of Shallow Lake, spent a day or two in Toronto during the week, selecting some stock.

Caley Bros. have started in the hardware business at Latchford. They were formerly clerks with Richardson & Co., North Bay.

Chas. Rutland, Toronto, representative of the Consumers' Cordage Co., is able to be at his place of business again after an illness.

Thomas Wright, representing H. S. Howland, Sons & Co. in Manitoba and the Northwest, has returned west after a month's sojourn in Toronto.

W. R. Stavert, Montreal, who has been on a selling trip with Jenkins valves in Ontario, was a caller on Hardware and Metal in Toronto a few days ago.

Christian A. W. Voss, for many years a hardware merchant in Toronto, died at his home there last Sunday. He was born in Hanover, Germany, 75 years ago.

H. R. Chillas, formerly with H. S. Howland, Sons & Co., Toronto, has been appointed one of the Western Ontario traveling representatives of the Kemp Manufacturing Co.

Mayor J. W. Dickson, who disposed of his hardware business at Dundas eighteen months ago, is now conducting a stove and plumbing shop in connection with his real estate business.

C. C. Lee, of Goderich, has purchased M. W. Howell's hardware business. The two stores being adjoining an archway will be made connecting them. Mr. Howell intends to go west shortly.

Albert Karges, Woodstock, has resigned his position as head salesman for Gardner & Co., and has engaged with the James Stewart Manufacturing Company of that town to act as one of their representatives on the road.

F. Hamilton, of the F. Hamilton Company, Hamilton, who was severely injured in the back last fall in an accident on the Hamilton and Grimsby electric railway, is around again but will not be able to take up active work again for a while yet.

H. C. Martin, British Columbia representative of H. S. Howland, Sons & Co., has purchased a residence in Vancouver where he has removed his family from Toronto. Mr. Martin will spend the bulk of his time on the coast in future, visiting headquarters only about once a year.

M. J. Quinn, mechanical superintendent of the province, has sent in his resignation to Hon. Dr. Reaume, the Minister of Public Works. Mr. Quinn entered the public service twenty years ago, when a mere boy, and by his merit and ability attained his present position in charge of the heating, ventilating and similar apparatus in all the Government buildings throughout the province. He is a nephew of the late Hon. C. F. Fraser, who was Minister of Public Works. Mr. Quinn has accepted a responsible position with one of the most enterprising and go-ahead heating supply houses in Canada.

Quebec.

O'Hara & Hawkins, plumbers, of Montreal, have assigned.

Joseph Lafrance, plumber, Montreal, has made an assignment.

Edward McGowan, of Ste. Martine, visited Montreal recently.

Fogarty Bros., electricians, of Montreal, have assigned to creditors.

J. A. Beaudoin & Co., Montreal, have started in the hardware business.

The hardware firm of A. Roy & Co., Joliette, has dissolved partnership.

The assets of Lefebvre & Lariviere, hardware dealers, St. Hyacinthe, have been sold.

Chas. Milot, general merchant, of St. Monique, visited some of his trade connections in Montreal this week.

J. J. Sophus, of McLean & Sophus, Montreal, is again calling on the trade, after a severe attack of pneumonia.

Chas. MacDonald, manager of the St. John Iron Works, St. John, N.B., was a visitor in Montreal a few days ago.

Octave Charland, plumber and tinsmith, of Nicolet, was in Montreal during the week placing orders for supplies.

W. J. Daly, of Daly & Morin, Montreal, has returned to that city from a ten-day trip to the Maritime Provinces.

H. G. Hagen, of H. G. Hagen & Co., plumbers, of Sydney, C.B., called on some of the Montreal supply houses this week.

The general offices of the Thos. Davidson Manufacturing Co., Montreal, have been greatly extended by taking over the space lately used as a sample room.

P. D. Dods & Co. are removing their city offices and warerooms to the building formerly occupied by the Packard Company on McGill street, Montreal.

Matthew Moody, of the Matthew Moody & Son Co., manufacturers of agricultural implements, Terrebonne, was in the Royal City this week on a business trip.

R. J. Younge, sales manager of the Canadian Rubber Company, Montreal, left this week for a six weeks' trip to the coast, during which he will visit the different branch offices of his company.

Among the hardware buyers in Montreal this week were: C. O. Gervais, St. Johns; Mr. Pringle, Huntingdon; J. A. Paquin, St. Eustache; Maxime Andy, Quebec; and D. Brousseau, jr., Quebec.

G. A. Kohl, vice-president of B. & S. H. Thompson & Co., importers, Montreal, returned on Tuesday from an extended business and pleasure trip to the Mediterranean and other European points.

W. J. Grant, representing William Hutton & Sons, Sheffield and London, Eng., was in Montreal this week on his return home from a three months business trip through Canada. Mr. Grant represents one of the oldest and largest manufacturers of silverware and electro plate, and reported business everywhere to be excellent.

Western Canada.

W. J. McKay has opened up a hardware store at Midale, Sask.

R. A. Douglas, hardware merchant, of McGregor, Man., has sold out to W. M. Read.

The Mitchell Electric Co., Winnipeg, has been taken over by the Hudson Electrical Co.

A. M. St. Arnaud, of Montreal, was in Winnipeg this week calling on the wholesale trade.

J. H. Ashdown returned to Winnipeg last week from an extended pleasure trip in California. He was fortunate enough to leave San Francisco about a week before the disaster occurred.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 70.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Hoop Iron—Advance of 10 cents all around.
Ingot Tin—Is now quoted as high as 44-45 cts.
Antimony—Shows a further advance to 24-25 cents.
Mixed Rags—Are now commanding $1 to $1.20 per 100 lbs.
Pig Iron—Summer prices are now quoted.

TORONTO.

Ingot Tin—Another cent advance has been made.
Antimony—Now quoted at 24 cents.
Black Sheets—Advances have been made on small gauges.
Tire Steel—Quotations are 5 cents higher.
Poultry Netting—Discounts have been lowered.
Old Material—Better prices are offering for scrap zinc and wrought iron.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 4, 1906.

Business is remarkably strong this week, to put it mildly. All hardware dealers seem to be in such a rush for their goods that jobbing houses here are working at the top of their capacity getting shipments out on time. Activity is displayed in all seasonable lines, and present conditions will very likely continue for two or three weeks longer, after which things will get back to normal again.

The only price change of any importance noted this week is in hoop iron, which has been advanced 10c. for all sizes. Other goods remain steady, with a disposition to go higher rather than lower.

AXES—Business is good. We quote: $7.60 to $9.50 per doz.; double bitt axes $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—We quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Current quotations for medium orders are $4.25 for cold blast.

RIVETS AND BURRS—Trade is still jumping ahead at a good rate, and orders are numerous. We quote: Best iron, rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Trade has not yet opened up, nor will it in all likelihood during the present month. In the meantime we are quoting: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS—Discounts are unchanged and orders good. We quote: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—The regular trade is being done in this line without any change in prices. Our prices are as follows: ⅜ and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—There is a good call for this line, which continues to sell at the following discounts off list. C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Conditions are steady but the demand is not overly large at present time. We still quote: $2.15 per keg, f.o.b., Montreal.

CUT NAILS—Business is featureless. We still quote: $2.20 per keg, f.o.b., Montreal.

HORSESHOES—Both jobbers and manufacturers report an active market We quote the following prices: P.B. new pattern, base price, $3.50 per 100 pounds; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—The demand, while steadily increasing, is not yet up to its full capacity. The jobbing houses here, however, are now getting out their catalogues, so that when these are in the hands of the trade large orders will no doubt be noticed. For the present the chief demand is for fishing tackle and ammunition, while baseball supplies are also well to the fore.

BUILDING PAPER—Business is only fair, though it is still increasing slightly. Manufacturers are looking for the trade to open up very shortly. Prices remain unchanged.

CEMENT AND FIREBRICK—There is now a first-class call for both cement and firebrick, as the season for building operations is well under way. The big jobbing houses are now quoting their Summer prices, the opening of navigation having allowed the customary drop in prices. We quote the following: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Our prices are as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Sales are strong and prices steady. We quote as follows: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Shipments are very numerous and price remains $1.45 per hundred square feet.

BINDER TWINE—Conditions remain unchanged.

RAW FUR—We quote as follows:

		No. 1.	No. 2.	No. 3.	No. 4
Bear	Black	$12 00	$8 00	$4 00	$1 00
"	Yearlings	7 00	5 00	2 00	0 30
Fisher		7 00	6 00	5 00	....
Fox	Red	3 00	2 25	1 00	0 20
"	Cross	5 00	4 00	2 00	0 50
Lynx		7 00	5 00	4 00	....
Marten	Dark	10 00	5 00	2 0	0 50
"	Pale	6 00	3 00	1 25	0 50
Mink	Dark	6 00	4 00	1 50	0 50
"	Pale	3 25	2 50	1 50	....
Muskrat	Spring	0 25	0 18	0 15	0 03
Raccoon		1 50	1 00	0 50	0 20
Skunk		1 75	1 50	0 75	0 45
Weasel	White, 35 to 50c. for prime skins.				
Wolf	Timber	3 00	....	....	....
"	Prairie	1 25 to 1 50	0 75	0 35	....
Wolverine		5 00 to 6 00			

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 4, 1906.

There is a well sustained activity in all lines of hardware, but more especially in builders' material and garden implements. The recent advance in shovels does not seem to lessen the buying any, as some big shipments are going out now owing largely to the amount of construction work that is going on.

Discounts on poultry netting have been lowered to 55 and 5 off 2-inch mesh 19 w.g., and on all smaller sizes 50 per cent. off.

Cement remains at the same price, and although the demand is heavy, most of the large users are buying on contract, so that it would seem that the present prices will remain unchanged for some time.

Rope and cordage is firm in price, with a good demand, particularly in marine lines. Jute is at present higher in price than it has been in thirty years.

There has been a decided impetus in all sporting goods this week, fishing tackle being quite a leader.

AXES AND HANDLES—Orders are being booked now for future delivery, although present business is quiet.

CUTLERY AND SILVERWARE—Some large orders are being taken now, and travelers are carrying many new things.

SPORTING GOODS—A decided increase is shown in all lines.

WASHING MACHINES— Trade is fairly active at present.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING—Some changes have been made in discounts, making prices higher. A large amount is being sold.

GALVANIZED WIRE— We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—An active demand is experienced. Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The usual large volume of business is being done. Prices are being cut some.

CUT NAILS—Cut nails are selling in fairly large amounts.

HORSENAILS—Business shows an improvement now that the weather has become dry. No price changes.

HORSE SHOES—The Spring has ushered in a good trade. Market firm. We still quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—The usual amount of business is being done.

RIVETS AND BURRS — An active trade is experienced in all sizes.

SCREWS—Business in screws continues good and a large amount is going forward.

BOLTS AND NUTS—A large amount of bolts and nuts are sold now. No further price changes.

CORDAGE—We now quote as follows: On binder twine, 500 feet, 10c. lb:; 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13 1-4c. lb. Golden Crown, 500 feet, 9 3-4c. lb. On Gold Medal Brand (imported), 600 feet, 12 1-4c.; 650 feet, 13 1-4c. Discount for car lots: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

CEMENT—Cement continues to be called for in large quantities, and fears are entertained in some quarters that a shortage will be felt before the end of the season. Prices remain the same and will no doubt, until Fall, as most users are buying on contract prices. We are quoting as follows: For carload orders, f.o.b., Toronto, Canadian Portland, $2.00. For smaller orders ex. warehouse, Canadian Portland, $2.15 upwards.

FIRE BRICK — There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

HIDES—Buyers have advanced the prices paid for country hides, calf skins, rendered tallow and pulled wool. The supplies of hides continue light. It is said killing has not commenced in the country.

Hides, inspected, steers, No. 1		0 11

Canadian Metal Markets

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 4, 1906.

Speaking generally, great activity is displayed on the metal markets this week. Everybody is clamoring for goods and insisting upon immediate deliveries. Consequently the big distributing houses are at their wits ends to get out their shipments in time.

Among ingot metals tin and antimony easily hold the foremost place in the attention of the trade. The former is advancing every day, and although some time ago it jumped up to the highest price yet reached, the end does not seem to have been arrived at, even now, for we declare another advance this week with the market stronger than ever and indications pointing toward still higher quotations. It is whispered that this remarkable condition is the result of a corner successfully engineered in the English market, whose influence is even stronger than had been at first expected.

Antimony, too, has now reached a fabulous price, dealers here not being any too anxious to sell, even at the figures we are quoting, from 24c. to 25c. per lb. In England the price has now jumped to over £100 per ton, as against about £27 quoted only a year ago.

Pig lead is now holding its own, and whatever slight fluctuations there are have no very great effect upon the general condition. We are quoting this week the same price as for some time past.

The importers of pig iron are now quoting their Summer prices. These, of course, show a drop from the figures given all Winter for delivery from stock, but the market is in reality firmer and higher prices are to be expected. There is a good buying movement, and while orders for small lots are being taken up rapidly from stock, there is also an excellent demand for import. Buyers are apparently anxious to stock up before the advance which is expected by all. The rebuilding of San Francisco will consume a tremendous amount of structural steel, and it is considered that this will act upon the pig iron market and force prices up by curtailing the available supply.

CANADA PLATES — No change in price is to be noted, but the demand is increasing right along. We still quote: 52's, $2.60 ; 60's, $2.65 ; 75's, $2.75 ; full polished, $3.75 ; galvanized, 52's, $4.10 ; 60's, $4.35.

COPPER — Condition remains unchanged. The demand is good and prices stiffly maintained, as follows: Ingot copper, 20 1-2c. to 21c.; sheet copper, base sizes, 25c.

INGOT TIN—This metal shows an advance in price almost daily. The highest price in its history is now being quoted, and it is difficult to obtain even at that. Although our prices show an advance this week, it is probable that still higher figures will be asked before our next issue. We now quote: from 44c. to 45c. per lb.

PIG LEAD—This metal maintains the same status as was noted in our last report. We still quote: $4.25 to $4.35 per hundred pounds.

PIG IRON—We are this week quoting prices for import. Our figures are:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	20 75	"	"
Clarence No. 1	18.00	"	"
" No. 3	17.65	"	"

BOILER TUBES—We quote: British and American tubes, 1½ inch, 8½c. ; 2 inch, 8½c. ; 2½ inch, 10c. ; 3 inch, 12c. ; 3½ inch, 15¾c. ; 4 inch, 20c. ; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices: Colonial Black Diamond, 8c. to 9c. ; Sanderson's 8c. to 45c., according to grade ; Jessop's, 13c. ; Jonas & Colver's, 10c. to 20c. ; "Air Hardening," 65c. per lb. ; Conqueror, 7½c. ; Conqueror High Speed Steel, 60c.

MERCHANT STEEL — Our prices

remain as follows: Sleigh shoe, $2.17 1-2 tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — We still quote as follows: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON — Enquiry is good and prices ruling are still as follows: Queen's Head, 28 gauge, $4.35; 26 gauge, $4.10; 22 to 24 gauge $3.85; 16 to 20 gauge, $3.60; Apollo, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Comet, 28 gauge, $4.15 to $4.45; 26 gauge, $3.90; 22 and 24 gauge, $3.60; 16 to 20 gauge, $3.45; Bell brand, 28 gauge, $4.30 to $4.35; Fleur-de-Lis, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; in less than case lots, 25c. extra.

BLACK SHEETS—We quote as follows: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

ANTIMONY—Dealers are at a loss to know how to quote on antimony, but it is quite safe to say that very little can be obtained under our price of 24c. to 25c. per lb.

TIN PLATES—There is no change to note in current quotations, but the tendency is decidedly upward, and prices will no doubt be advanced within a short time. We quote as follows: Cokes, base size, 1C 14 x 20, $4; charcoal base size, 1C 14 x 20, $4.25.

TERNE PLATES — Our quotations are unchanged, but the tendency is upward here in sympathy with tin plates, and the expectation is that there will soon be an advance on the current price of $6.85.

INGOT ZINC—The market is firmer, but no change is reported in quotations, which remain: 6 3-4c. to 7c.

SHEET ZINC—The tone is decidedly firmer, but we still quote: $7.50 in casks; $7.75 in less than casks.

SHEET LEAD—Our prices: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON — We are still quoting: $2.05, f.o.b., Montreal.

OLD MATERIAL—There is not much change in the general condition. In copper and brass there is a scarcity of material, and it is sold as soon as it comes in. There is little doing in wrought iron and quotations are nominal. A good demand, however, is being experienced for casting iron. Old rubber continues high, with every probability of early advances. We quote as follows: Copper wire, 15c.; light copper, 14c.; heavy red brass, 13½c.; yellow brass, 10c.; light brass, 7½c.; lead, 3½c.; zinc, 4c.; machinery cast scrap, $13.50; wrought scrap, $12; stove plate scrap, $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7 1-2c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 4, 1906.

That tin will go to 50c. is now predicted by keen dealers, some saying that if the demand keeps up there is nothing to prevent it going to $1. Everywhere stocks are comparatively low and buying is light, while available stocks of raw material are low. On top of this comes the report that tin mills out of commission in the United States will shortly resume and more buyers will be looking for material from the producers. The South American, Australian and English production of tin is as great as the mine operators can secure, and the East Indian mines must continue the chief source of supply unless the much mooted Alaskan prospects develop into more than promoters' dreams. The steady increase in the use of tin products is chiefly responsible for the shortage, and with no substitutes available there does not appear to be much prospect of lower prices. Solder and babbitt metal are bound to feel the effect of the high prices, as if prices do not increase the quantity of tin used in these articles will be lessened.

Zinc spelter firmer with a slight advance, and boiler plates and tubes are also quoted a little higher. Antimony is up another half cent, and 24c. is now being asked. In old materials wrought iron and scrap zinc also show higher prices offered, with old rubber a trifle easier.

PIG IRON—Demand continues active with prices firm. Summer prices will have the effect of bringing in cheaper iron from Great Britain.

Middlesboro, f.o.b., Toronto	$21 50
Hamilton, No. 1, at furnace	21 00
" No. 2 "	20 50
Midland, No 1, "	21 00
" No. 2, "	20 50
Radnor, at furnace	30 00
Londonderry, f.o.b. Toronto, No. 1	22 00
" " " No. 2	21 50

BAR IRON — The market continues strong, with the ruling price at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—The regular weekly advance has been made, and for large lots we now quote 43c. per pound.

TIN PLATES—Demand is increasing with prices unchanged.

GALVANIZED SHEETS—Prices are unchanged and a good demand exists.

BRASS——The market is firm and prices steady. Buying is fairly active and quotations 23c to 24c. per pound.

BOILER PLATES AND TUBES—The demand is steady and we continue to quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1 1-2 inch, $8.50; 2, $8.70; 2 1-2, $10.50; 3, $12.00; 3 1-2, $15.80; 4, $20.00. Terms, 2 per cent. off.

LEAD—The market is stronger, and we quote as follows: Canadian pig lead at $4.40 and English pig at $4.65 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—Business is increasing and prices a trifle higher. We quote: 7 1-4c. per lb. for foreign and 5 3-4c. to 6c. per lb. for domestic.

COPPER—The market is more active and prices are held strong. We still quote: Ingot copper, $20 per 100 lbs. and sheet copper, $25 per 100 lbs.

ANTIMONY — Another advance has been made and we are now quoting 24c. per pound.

OLD MATERIAL—The demand is particularly good now in all lines, with advances on two lines this week. Dealers' buying prices continue as follows: Heavy copper and wire, 15 1-2c. per lb.; light copper, 13 3-4c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8 1-2c. per lb.; tea lead, $3 per 100 lbs.; heavy lead, $3.25 per 100 lbs.; scrap zinc, 4 1-4c. per lb.; iron, No. 1 wrought, $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7c. per lb.; steel, $5; old rubbers, 7 1-4c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Until the coal strike is over no settled prices can be quoted. We quote **nominally:**

Anthracite in cars at bridges, egg, stove and nut, $5.50; grate, $5.25; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; 3-4 inch, $1.40; run of mine, $1.30; nut, $1.25; N.P. and S., $1.00; slack, 75c.; box cars 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1 1--4 inch, $2.60; 3-4 inch, $2.50; mine run, $2.40; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

U.S. IRON AND STEEL MARKETS.

From the Iron Age, May 3, 1906.

So far as can be learned, only a few orders of some size footing up to 10,000 tons of structural steel have been placed for San Francisco delivery. In order to convey some definite impression what the steel requirements after a great fire amount to we cited the fact last week that the orders from Baltimore to rebuild the burned district there to date amounted to 30,000 tons. This seems to have been interpreted in some quarters as an estimate of what San Francisco might use. Such an estimate, of course, would be altogether too low. The point is that even if it ran up to ten times the Baltimore tonnage during the next five years, which is considerably above conservative expert esti-

mates, the structural miles of this country could readily meet the demand without straining present resources, and without creating any boom in the steel industry. The public has an altogether exaggerated idea of the steel requirements of the building industry. They strike the layman and are impressive, but the tonnage is not greater than that needed by the wire industry, for example.

With the exception of the market for Bessemer and basic pig in the central west the pig iron markets are showing signs of irregularity and of some weakness. The United States Steel Corporation has taken all the May Bessemer pig in the Pittsburgh district, the quantity being 14,000 tons, or considerably less than was believed to be available. In the Chicago district 10,000 tons of basic pig has been purchased for the third quarter by an independent steel mill, and 6,000 tons more is under negotiation for another works. In the east a leading company has bought 18,000 tons for Philadelphia delivery, on which lower prices have been made than have prevailed lately. Eastern Pennsylvania plate mills have contracted for 10,000 to 15,000 tons, and some other smaller blocks have been placed.

The strikes in the foundries in the Boston and Chicago districts may affect the current consumption of foundry iron, in which some irregularity has developed lately, particularly in those sections which the lake furnaces can readily reach.

The plate trade has been rather quiet lately and the mills, with their enormous productive power, are now able to make prompt deliveries. It is expected, however, that the Pennsylvania Railroad will soon place orders for 20,000 cars, which would call for 200,000 tons of plates and shapes. There is an inquiry in the market, too, for 17,000 tons of narrow plates for pipe.

The irregularity which has existed for some time in the market for boiler tubes has culminated in an open reduction of four points.

The independent sheet mills are urging an advance of $2 on sheets to compensate for the higher cost of steel. The market has stiffened by the withdrawal of concessions from the official prices.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, May 3, 1906.

The audacious attempt of a weakened union of unskilled land laborers to control highly paid skilled employes, of whom not one-tenth are members of any union, has resulted in the temporary paralysis of lake traffic. Owing to the rapid increase of the use of automatic unloading machinery, the number of laborers required on the docks is being gradually reduced and the union of longshoremen, in order to strengthen its position, has demanded that the vessel owners recognize its control of the mates. Fortunately, nearly all furnaces are prepared to continue in blast for from six to eight weeks, and some could run three months without an additional ton of ore. While the amount of ore shipped this month will undoubtedly be reduced, it does not seem probable that the manufacture of iron will be interfered with to any great extent. The final outcome of the strike promises to be a much more satisfactory relation of employers and employes.

All the information obtainable in regard to conditions in San Francisco indicates that the demand for structural material will not be felt to any appreciable extent for several months.

The pig iron market is active in New York and Chicago, but quiet in a considerable part of the territory between these two cities, especially in Pittsburg, where the only important transaction of the week was the contract by the Steel Corporation for the May surplus of the Bessemer pig iron up to 20,000 tons to be manufactured by the Bessemer Association.

The scarcity of crude steel is still a marked feature. About 20 per cent. of the plants of the American Sheet and Tin Plate Co. are idle on account of inability to obtain sheet and tin plate bars. The advanced price of $3.60 per base box for tin plate is not being closely adhered to. There is a decided improvement in the sheet business, especially in the west, and specifications on contracts are heavy.

The Tennessee Coal, Iron and Railroad Co. has taken orders for about 200,000 tons of open-hearth rails for delivery next year at $29. The decision to charge $29 for open-hearth rails will probably establish a differential of $1 over Bessemer rails, which are to be sold in 1907, as for a number of years past, at $28. As a number of makers of the latter will in a not far distant future produce open-hearth rails, it is understood that they regard with favor the establishment of this differential.

The recent granting of the concession of $2 per ton on steel bars to agricultural implement manufacturers is causing considerable unfavorable comment, and the steel bar market is not considered as firm as it was previous to this action.

LONDON METAL MARKETS.

From Metal Market Report, May 2, 1906.

PIG IRON—Cleveland warrants are quoted at 49s. 3d., and Glasgow standard warrants at 48s. 10d., making prices as compared with last week 1s. 1½d. lower for Cleveland warrants and 1s. 5d. lower for standard warrants.

TIN—Spot tin opened firm at £184, futures at £178 5s., and after sales of 150 tons of spot and 210 tons of futures closed firm at £184 5s. for spot, £178 5s. for futures, making price compared with last week £2 10s. higher on spot, and 5s. lower on futures.

COPPER—Spot copper opened weak at £83 10s., futures £81 10s., and after sales of 450 tons of spot and 300 tons of futures, closed steady at £83 10s. for spot, and £82 for futures, making price as compared with last week £2 lower on spot and £2 lower on futures.

SPELTER—The market closed at £26 12s. 6d., making price as compared with last week unchanged.

LEAD—The market closed at £16, making price as compared with last week unchanged.

Nova Scotia Trade News.

Halifax, N.S., May 2, 1906.

Jobbers report that trade continues brisk, the orders coming in from outside sections. The travelers are meeting with good success everywhere. The season is one of the most satisfactory for years, and the outlook is for continued activity. All the coal mines are running full time, and the various industries appear to have lots of orders on hand. Prices are about steady, there being no change of special note since last report. Collections are good. Heavy sales have been made the past week of rakes, shovels, garden forks and hoes, and also wire netting. Paints and oils continue in good demand, and small ropes are selling freely. Builders' supplies are also being ordered rather extensively. In Halifax this season building operations promise to be brisk, as a number of large contracts have been let. Metals are very firm and there is a feeling in the market that tin will move up. The same may be said of black sheet iron and bar iron. Zinc is a trifle easier. Nails remain unchanged. Turpentine is quoted at $1.10. Cement and white lead are both very firm. The former is in good demand.

* * *

Operations by the Standard Coal & Railway Co., in Cumberland County, have reached a promising stage at a depth of 1,215 feet. The drill now being operated at Newville has passed through a belt of conglomerate and pure grey sandstone, which shows coal measures. The punch drill has now been stopped at the above depth and the hole is being rimmed out and the casing set down. The services of an expert driller have been secured to do the work. A Government calyx drill from New Glasgow has been brought to Newville and will be used to spring out a core, and at about 200 feet it is expected to strike the same seam of coal as in No. 1 borehole, being a thousand feet nearer the surface. This, if struck, will prove the seam to be one of the largest in Eastern Canada and that the Cumberland coal basin is one of the largest in the world.

* * *

The big manufacturing industries of Amherst are rushed with work. Rhodes, Curry & Co. have recently received orders for Dominion dump cars, limestone cars for the Dominion Iron & Steel Co.; flat cars for the Temiskaming & Northern Ontario Railway; logging cars for the Springfield Lumber Co. and colonist cars for the Canadian Northern Railway. Two orders for axles have been received from the Canadian Pacific. The men are now working on orders for Hart dump cars for the Intercolonial, and flat cars for the Canadian Northern.

(*Continued on page 44.*)

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, May 3, 1906.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

Business continues very active in all general lines, values holding steady. The advance in white lead noted last week is being well maintained. Hinges have also been advanced ½c. per lb.

GAME TRAPS—Discounts are as follows:

H. & N., discount	50 and 5 p.c.
Victor, "	65 and 10 p.c.
Newhouse, "	35 p.c.
Bear	$7 each

SCREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows:

Cold blast lanterns	$5 25 per doz.
Coppered cold blast lanterns	7 25 "
Cold blast dash "	7 75 "
Lift Lanterns	4 25 "

BLUESTONE—Selling well at $6.25 to $6.50 per cwt.

WIRE—Prices are steady. We quote:

Barbed wire, 100 lb					$2 90
Plain galvanized, 6 to 8	$3 39	9	$2 50		2 90
" " 10	3 50	12			3 10
" " 13	3 20	14			3 90
" " 15	4 45	16			4 60
Plain twist					3 00
Staples					3 50
Oiled annealed wire, 10	$2 96	11			$3 02
" " 12	3 10	13			3 20
" " 14	3 30	15			3 45
Annealed wires (unoiled) 10c. less.					

HORSESHOES—Quotations are as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

HORSENAILS—Revised list and discounts are now as follows:

per lb.		per lb.	
No. 10	$0 20	No. 6	$0 28
" 9	0 22	" 5	0 32
" 8	0 24	" 4	0 40
" 7	0 26		

Discounts are quoted as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅜ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

SCREWS—Discounts are as follows:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

NUTS AND BOLTS—Discounts are unchanged and continue as follows:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

RIVETS—Quoted now as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	34½
" No. 12	40

COIL CHAIN—Unchanged in price. We quote:

Coil chain.—

3-16 inch	$7 25	¼ inch	$7 20
5-16 inch	5 20	⅜ inch	4 60
7-16 inch	4 45	½ inch	4 30
⅝ inch	4 10	¾ inch	4 00

SHOVELS—Discounts on spades and shovels continue 40 and 5 per cent.

HARVEST TOOLS—Discounts are now 60 and 5 per cent.

AXE HANDLES—Quoted as follows:

Axe handles, turned, s.g. hickory, doz			$3 15
No. 1	1 90	No. 2	1 60
Octagon extra	2 30	No. 1	1 60

AXES—Prices quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz	9 00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

BUTTS—The discount on wrought iron butts is 70 per cent.

CHURNS—The discounts from list prices are 45 and 5 per cent.

CHISELS—Quoted at 70 per cent. off list prices.

AUGER BITS—Discount 70 per cent.

BLOCKS—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

FITTINGS—Discounts continue as follows:

Wrought couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	55 p.c.

GRINDSTONES—The price is now 1 3-4c. per lb.

FORK HANDLES—The discount is 40 per cent. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 per cent. off list prices.

HOOKS—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " , per doz	1.70

STOVE PIPES—The price has declined and quotations are now as follows:

6-inch, per 100 feet length	8 50
7-inch, " "	9 25

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 per cent.

WASHERS—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

WRINGERS—As noted last week the price has been advanced $3 per dozen. We quote:

Royal Canadian, per doz	$33.00
R. B., per doz	37.75

FILES—Discounts are quoted as follows:

" Arcade "	75 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

BUILDING PAPER—Prices are as follows:

Plain.		Tarred.	
Joliette	40c.	Joliette	65c.
Cyclone	55c.	Cyclone	80c.
Anchor	55c.	Anchor	65c.
Pure fibre	60c.	Pure fibre	80c.

TINWARE, ETC.—Quoted as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, Famous	50 p.c.
" Imperial	50 and 10 p.c.
" " (one coat)	60 p.c.
" Premier	50 p.c.
" Colonial	50 and 10 p.c.
" Royal	60 p.c.
" Victoria	45 p.c.
" White	45 p.c.
" Diamond	50 p.c.
" Granite	60 p.c.

CORDAGE—Quotations are as follows:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25
Cotton rope, per lb	00 21

SOLDER—Quotations now at 24c. per lb. with concessions for large quantities.

VISES—Prices are quoted as follows:

"Peter Wright," 30 to 34	14½c. per lb.
" " 35 to 39	14c. "
" " 40 and larger	13½c. "

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—Shot has been reduced 25c. per cwt. Quotations are as follows:

Ammunition, cartridges, Dominion R.F.	50 and 5 p.c.
Dominion, C.F., pistol	30 p.c.
" military	20 p.c.
Ammunition, cartridges, American R.F.	33⅓ p.c.
C.F. pistol	5 p.c.
C.F. military	10 p.c. advance.
Loaded shells:	
Dominion Eley's and Kynoch's soft, 12 gauge.	
black	16 50
chilled, 12 gauge	17 50
soft, 10 gauge	19 50
chilled, 10 gauge	20 50
Shot, Ordinary, per 100 lb	7 00
Chilled	7 50
Powder, F.F., keg, Hamilton	4 75
F.F.G., Dupont's	5 00

IRON AND STEEL—We quote:

Bar iron (basis)	2 70
Swedish iron (basis)	4 75
Sleigh shoe steel	2 75

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

MUNRO WIRE WORKS, Limited

NEW GLASGOW, N.S., AND WINNIPEG, MAN.

PAINT SPECIALTIES

Are money makers and should not be overlooked when stocking up. We carry a large assortment in neat and attractive tins.

SAMPLES AND PRICES ON APPLICATION

THE WINNIPEG PAINT AND GLASS CO., LIMITED

Warehouses—CALGARY, EDMONTON *WINNIPEG*

We Manufacture in Winnipeg:

Metal Shingles, Sidings and Ceilings, Corrugated and Plain Round Conductor and Eavetroughs in 10 ft. lengths, Metal Windows, Cornices, Skylights.

WINNIPEG CEILING & ROOFING CO., - - Foot Scott St., Fort Rouge

BRITISH PLATE AND WINDOW GLASS

ALSO

Wired Rolled — Wired Polished Plate — Prismatic Glass

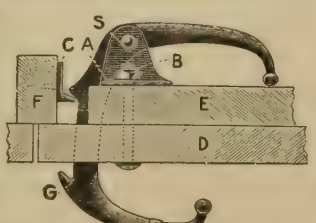
Figured, Rolled and Cathedral — Rolled Glass

Muffled, Obscured and Enamelled Glass — Plain and Bevelled Mirrors, etc.

Prices on application. FULL STOCK IN OUR WINNIPEG WAREHOUSE.

OFFICE AND WAREHOUSE: 157 MARKET ST., - - - **WINNIPEC, MAN.**

P.O. Box 164. Telephone 3271.



Also Montreal, Toronto and Vancouver

Louden's Double Acting Door Latch

No more Broken Doors with the Wind

It holds the door closed by engaging the catch C and holds the door open by engaging the bracket H on the wall. To open the door when closed, all to be done is to pull the handle of the latch, and to close when open, do the same. It is a simple, cheap, durable device, and will pay for itself several times every year.

MANUFACTURED BY

LOUDEN MACHINERY CO., - Guelph, Ont.

Manufacturers of Hay Carriers, Barn Door Hangers, Feed and Litter Carriers, Cow Stanchions, etc.

Glaziers' Sundries!

Send us your orders when in a hurry and mark **"RUSH"!** for any of the following:

Putty in bladders
Putty in bulk
Glaziers' Diamonds
Red Devil Glass Cutters
Glaziers' Rules
Cutting Boards
Glaziers' Points
Point Driving Machines
Putty Knives, all styles

Complete stock for immediate shipment from either Winnipeg or Calgary. All orders shipped same day as received.

G. F. STEPHENS & CO. LIMITED

PAINT AND COLOR MAKERS

WINNIPEC and CALCARY

Spring steel	3 25
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	13 00

SHEET ZINC—The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The price is steady at the recent advance to $5.00 per cwt. for small lots with a reduction of 25c. per cwt. on ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are:

Black, ¼ inch	2 45	Black 1 inch	5 75
" ⅜ "	2 85	" 1¼ "	7 85
" ½ "	3 15	" 1½ "	9 40

16 to 95 "	17.30
90 to 100 "	

NOVA SCOTIA TRADE NEWS.

(*Continued from page 41.*)

After these have been completed work on the Grand Trunk box cars will be commenced. Six snow plows and six conductors are also under construction. The works are very busy and no more orders can be taken except for delivery some time in the future. It is reported that this firm have about decided to establish a rolling mill in connection with their present plant. The building will be near the works, and this branch will probably give employment to one hundred men.

* * *

The new watershaft at Bridgeport now under construction at the International colliery, is being pushed forward rapidly. A large number of men are employed there. The huge smoke stacks have been placed in position and the necessary machinery is being taken out to the plant. The shaft is situated about one-half mile northeast of the Bankhead. It was necessary to sink it owing to the great expense the company were under in having the water pumped at the old borehole. This is the second water shaft operated by the coal company, the other being at Caledonia.

* * *

The prospects are that development work at the Beaver Hat gold mine will be pushed forward rapidly. The work up to the present has been largely in the nature of a test of the property and these having proved satisfactory, machinery will be at once installed, the mine thoroughly equipped, and operations on an extensive scale will be commenced. Since the work of development began last June, about $20,000 worth of the yellow metal has been secured, which represents, roughly, an average of 18 dwts. per ton. This represents the work of about sixteen men on an average and considering the facilitiess, is very satisfactory. The company have declared no dividend yet, but the desultory operations have yielded sufficient to meet the cost of development. Manager Percy White says the company have secured the lease of a promising property near Sheet Harbor, which he thinks will even surpass the Beaver Hat properties, and upon which he will commence operations shortly.

MELTING POINTS OF METALS.

The melting point of tin is 442 degrees, lead 617 degrees, zinc 773 degrees, copper 1996 degrees, cast iron 1920 to 2190 degrees, and wrought iron 2900 degrees. The first three in the above list melt at a temperature below a red heat; hence they can be fused in an ordinary open fire and without the aid of an air blast.

J. A. LINDSAY BEREAVED.

Western hardwaremen will be sorry to learn of the sudden bereavement of J. A. Lindsay, ex-president of the Retail Hardware and Stove Dealers' Association of Western Canada, who was called to Winnipeg last week from the country by the news of the illness of his wife. Mr. Lindsay was out of town rendering assistance in organization work for the association when the news reached him and he arrived in Winnipeg several hours too late.

The funeral on the afternoon of Friday, the 27th ult., was largely attended. The pallbearers were: J. H. Ashdown, G. A. Button, Fred Babb (Portage la Prairie), W. H. Cross, A. P. Macdonald and D. Phillip. The Western Retail Hardware Association and many of Mr. Lindsay's business friends sent floral tributes.

PRICES ON BINDER TWINE.

Mention was recently made of an agreement between the Ontario Government and W. B. Converse, of the Colonial Cordage Co., whereby Central Prison binder twine was to be sold to farmers at nine, ten and eleven cents a pound. It is now said that to make the stipulated profit the twine cannot be sold at those prices, but that a half cent a pound higher all around will be the ruling figures, making the different lengths respectively nine and a half, ten and a half and eleven and a half cents per pound.

HOBBS' SPECIAL TRAVELERS.

The Hobbs Hardware Co., London, have put two men on the road to carry cutlery, silverware and pearl goods samples only. Geo. W. Charles has taken the eastern field, from Toronto to Halifax, and Geo. Stacy will cover the ground from Toronto to Vancouver. They are carrying between 1,700 and 1,800 samples of these goods, but are not showing anything in the general hardware lines.

JOBBERS PLAY BALL.

On Saturday, April 28, the warehousemen and the travelers of H. S. Howland, Sons & Co. staff played an interesting game of ball, resulting in a score of 13 to 10 in favor of the road men. The line up was as follows:

Travelers—T. Wright, H. C. Martin, F. Smith, T. B. Williamson, Darby Foster, Ernie Butler, H. A. Gunn, Donald Roy, W. Cotton. Warehousemen—H. Tredger, Ted Swinbourne, Ben Hobbs, G. Tingle, A. Payne, H. Marshall, A. Gordon, H. Wilson, P. Rodgers.

SIDE LINE

FIRST-CLASS SIDE LINE for travellers calling on hardware, stove and tinware trade. Box 528, HARDWARE AND METAL, Toronto. [19]

SITUATIONS VACANT

HARDWARE CLERK—With knowledge o stoves; good salesman; state age, experience and salary. Send references. Estate A. Thompson, Bradford, Ont.

"Empire" shingles

New trade and added profits await dealers who handle "Empire" Metallic Shingles and go out among their townsmen who contemplate building, determined to have their orders.

Many people keep right on using old-fashioned wood shingles from sheer force of habit, no one having taken the trouble to show them the advantages of "Metallic" Shingles over wood. Don't you think you can convince some of them of the fireproof, lightning proof, storm proof, and rust resisting qualities of "Empire" shingles and put some profits into your pocket that now go to competitors? The facts are so self-evident that it requires minimum selling effort to get many good orders for "Metallic" building materials.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, etc.)
"Impervia" Fireproof Windows
"Metallic" Crestings and Finials
"Hayes" Metallic Lathing.
"Metallic" Corrugated Iron
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

417

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Taylor-Forbes New Catalogue.

A new edition of Catalogue "D" just issued by the Taylor-Forbes Co., Guelph, is now ready. The book contains about 170 pages, is 7 1-2 by 10 inches in size, and well bound in cloth. The front cover shows only the firm name on an armorial design of chaste style, and altogether the general appearance is pleasing.

The aim of the catalogue is to direct attention to the hardware specialties manufactured and handled by this company, and the care manifested in compiling it will no doubt give the desired result.

The first pages show door handles and latches suitable in style and construction to all kinds of buildings. After these are shown sliding door hangers for both inside and outside work. A large range is illustrated in door springs, pulls, hall hooks and many other lines that have to do with house and barn equipment.

One of the most extensive features in the catalogue is the lawn mower section. It comprises many different styles, both for hand and horse power, and with each style gives an explanatory chart of all the parts used. In ordering for repairs the convenience of this is obvious, as each part is numbered.

This catalogue has also been issued for Great Britain and Australia with prices in sterling currency. A new radiator catalogue is at present in the printer's hands. Dealers who have not yet received Catalogue "D" may have one on application.

Alabastine.

The Alabastine Co., of Paris, Ont., have issued a bright little booklet containing excerpts from a bulletin of the U.S. Department of Agriculture, and showing the advantage of alabastine in comparison with wall papers. A circular of colors and suggestions accompanies the booklet, both of which are for distribution among the trade.

Window Transparency Sign.

The United Brass Manufacturing Co. of Cleveland, are sending out their new window transparency sign. It is brightly colored and attractive and makes a nice showy ad for those who handle these goods. A free sign will be sent dealers on application.

Bolts and Nuts.

Catalogue "C" of the Steward & Romaine Manufacturing Company, 124 North Sixth street, Philadelphia, shows the latest and best in single and double expansion bolts and toggle bolts.

Hobbs Cutlery.

A neat folder has been issued by the Hobbs Hardware Co., London, showing some exceptionally fine samples of table and pocket cutlery, razors, etc. In razors the Hobbs Company handle what they term the Big 4—Rodgers', Greenough, I.X.L. and Boker's. There is some very instructive reading matter in connection with these goods that repays reading.

Clutch Nails.

For the secure packing of cases and boxes for shipping clutch nails are invaluable. They are of especial interest to hardwaremen. Catalogue and samples will be sent upon request by J. N. Warmington, 43 Scott street, Toronto.

McDougall Pumps.

The R. McDougall Co., of Galt, will be glad to place their catalogue of pumps in the hands of dealers. They make pumps for all uses and are in a position to supply the trade with any requirement.

Asbestos Sad Irons.

In order to push the sale of asbestos sad irons, the Dover Manufacturing Co., of Canal Dover, Ohio, will furnish a handsome steel display stand to those who purchase an assortment. A card will bring information from jobbers.

Electric Cooking.

The Prometheus system of electric cooking is something that must appeal to every housekeeper. This system is the elimination of the stove, and the equipment of the utensil itself with the heater. In this way no heat is wasted on a large body of metal, or in escaping, as the connection is direct to the article being cooked. Any house wired for electric lights may use these utensils. Further information will be supplied by the R. E. T. Pringle Co., 172 Dalhousie street, Montreal. The Pringle Co. are also large dealers in gasoline fire pots and torches, a catalogue of which will be sent dealers on request.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

512. Oils.—An east coast manufacturer of all kinds of oils, specialty compounded engine oils for railroad use, invites correspondence with buyers in Canada, and would also appoint a special resident agent at Montreal.

521. Gas Producer Plants.—A London firm manufacturing gas producer plants of suction and pressure types, engines, etc., desire to bring particulars of these goods before the notice of Canadian users.

NEW CITY TRAVELER.

One of the most recent appointments in Montreal traveling circles was announced this week, when the Dominion Wire Mfg. Co. added to their staff Thos. Blaikie, who entered upon his new duties on the first of the month. Mr. Blaikie is thoroughly acquainted with the trade, and has had wide experience. For many years he represented the Pillow & Hersey Mfg. Co., and has latterly been with the Montreal Rolling Mills Co. There is every reason to believe that Mr. Blaikie will most efficiently look after the interests of the Dominion Wire Mfg. Co. in the city of Montreal. Before leaving his former position Mr. Blaikie was honored by his fellow employes of the Montreal Rolling Mills Co., who presented him with a fine case of cutlery and silverware, accompanied by an address which expressed their sorrow at his leaving them, and their congratulations on his advancement.

FOUNDRY AND METAL INDUSTRIES

The plans for the Canada Iron Foundry's plant at Fort William are being prepared.

The Hamilton Steel and Iron Co. will build another 400 ton blast furnace either in Hamilton or on Lake Erie.

The Dominion Copper Co. have purchased a 30 drill compressor, to be used in their mines at Phoenix Camp, B.C.

The Bowmanville Foundry Co. will build a three story addition, 60 by 32 feet. Their specialty is light castings for piano work, etc.

The Belleville Rolling Mills have been purchased by J. W. Wardrope, of Ottawa, who will install more machinery.

The town of Fort William is negotiating with a car wheel foundry company with a view to its establishment there.

Iron pyrites is being mined in Hastings county and shipped to Buffalo, where it is manufactured into sulphuric acid of a high quality.

The Brantford Screw Works may find it necessary to leave that city on account of not finding a suitable site with trackage for their proposed extensions.

The Copper Mining and Smelting Co. of Ontario now own the old Bruce Mines, which are said to be still rich in copper. A new smelter will be built.

The Dominion Iron and Steel Company, of Sydney, C.B., has been awarded the contract for supplying steel rails for the V. V. B. E. Railway now in course of construction in British Columbia. It is understood that the deliveries will commence in June. The steamship Boverie, owned by Andrew Weir & Co., has been chartered to carry the first cargo. She will reach Sydney about the end of May, and will take on her cargo immediately, and sail for Vancouver via the Straits of Magellan.

THE INDUSTRIAL IMPORTANCE OF IRON.

To appreciate, even in a slight degree, the industrial evolution of the last century and a half one must picture to himself a world without steamships, railroads, electric trolleys, telephones, telegraph, steel bridges and buildings, iron or steel machinery and tools, factories and the products manufactured in them, newspapers and books, and one must free his mind from the thoughts and ideas traceable to these industrial changes. The influence of invention upon the thoughts of men is a subject neglected in our histories, which are frequently little more than graphically told details of feuds between rival kings. The industrial evolution was the prime factor in giving the average man economic, political and historical importance.

Too much stress cannot be placed upon the part played by invention in this world of unfolding possibilities. The origin of many important inventions, like, for example, letters and paper, is enshrouded in the mists of antiquity. Modern industry, however, is a development of the last century and a half. This advancement has been due largely to the fact that the world now has an abundance of a relatively cheap and serviceable material—iron. The invention of processes of cheaply producing iron and steel, before which the world was, relatively speaking, in a state of semi-barbarism, has completely revolutionized society, and ninety per cent. of the progress of the world has grown out of their invention and manufacture. To England is due almost entirely the credit for the foundation and development of the industry.

While iron and steel were known to the ancients, the metals were unavailable for ordinary purposes because of the expense involved in refining iron ores. Iron occurs free in nature only in meteorites, which, because of the iron in them, were looked upon by primitive peoples as gifts from the gods.

The importance of iron lies not only in that the metal can be obtained cheaply and in abundance, but that its several forms—cast-iron, wrought iron, malleable iron, steel, and the alloys of steel, such as nickel-steel—have a wide range of physical properties, consequently making the metal adaptable for widely varying uses. Further, the generation of electricity depends upon the magnetic qualities of iron.

The evolution of the iron industry is frequently said to have begun about 1735, at which time Abraham Darby began to smelt iron with coke at the Colebrookdale Iron Works, Shropshire, England. The blast furnace, however, seems to have been invented in Germany about the middle of the fifteenth century. In England, which country owes its commercial greatness to the iron business, the industry was carried on to a considerable extent for several centuries. The ore was smelted by charcoal. The business grew to such an extent that a threatened devastation of the forests induced Parliament to enact laws, which, by shutting off the fuel supply, greatly crippled the industry. As coal and iron ore were found in close proximity naturally attempts were made to smelt the ore by using coal as a fuel. Dud Dudley, in 1619, seems to have been the first to have succeeded in this. He kept his process a secret and nothing is known of his methods, although he is presumed to have first coked the coal. Dudley is an interesting character from many standpoints, especially to inventors, because of his manifold troubles arising over patents granted to him by the crown. Largely on account of unsettled political conditions the industry languished, however, until well into the next century. The contest between the charcoal ironmasters and the coke ironmasters was not given up entirely by the former until 1796.

By 1782 James Watt had worked out the principles of the steam engine sufficiently to enable him to obtain a patent. The world now had a power and a suitable material, and men were not lacking to develop the power and industrially make use of the material. Then commenced the period of invention and discovery which, in a few generations, has revolutionized industry and the life of the world.

ASBESTOS AND ITS USES.

Manifold are the uses of asbestos. In fact it is like electricity, only in its infancy. While visiting the Angus Shops in Montreal not long ago the use of asbestos in making locomotives was demonstrated in a striking manner. Perhaps it is not generally known that in order to protect locomotives through a rare diversity of climate which extends from one end of this Dominion to the other, and often entailing remarkable extremes and sudden changes, an asbestos overcoat is placed over the huge boilers of the largest of the locomotives. It prevents the heat from getting out and the cold from getting in, and thus a normal temperature of water is obtained with at the same time an economic asset in the saving of fuel and the maintenance of a uniformity of power. However, new uses are constantly being found for that most unique of minerals, says the Inventive Age.

Different from every other material in its occurrence, mining and preparation for the market, it forms an entire study in itself. When first mined, about a hundred years ago, it was thought to be of little use or no commercial value, and was considered chiefly as interesting to the geologist. Shortly after the Civil War (United States) it came into use in the manufacture of roofing felt and cement. Early attempts to spin the fiber were unsuccessful, but the difficulties have been overcome so that now a single asbestos thread, weighing not more than one ounce per 100 yards, which has a fair strength, can be made. This thread is employed for packing valves, etc., for which use it has obvious advantages.

Asbestos ropes for fire departments are made entirely of the mineral, or of asbestos with a core of steel. Firemen employ asbestos in a score of ways; and its uses for gloves, stove mats, lamp wicks, theatre curtains, cloth, in the construction of iron safes, etc., are well known; but a new method of utilizing it has just developed. It appears that socks made of asbestos are of advantage for soldiers. An army physician declares that the marching ability of the troops, which is the most important requirement for a regiment in the field, is less endangered by fatigue than through the sensitiveness of the skin of the feet against leather. This sensitiveness, which has always been recognized, the doctor thinks can be avoided through providing socks, or lining the soles of the shoes, with asbestos. It is said that the War Department of Austria is considering the adoption of this innovation and that a test of it will be made at the next manoeuvres.

PAINT, OIL AND BRUSH TRADES

DURABILITY OF PAINTS.

To those who are large users of paint for protective purposes, such as railway companies, bridge builders and others, the question of what paint ingredients offer the best protection and lasting powers is large enough to be seriously considered. In this connection it is worthy of note that in different tests made as to the durability of paints it has been found that the length of service varied not as to the particular ingredients contained in the paint, but rather to the degree of natural fineness or coarseness of those ingredients.

The Reading Railway Co., in experiments with three paints ground in the same way and used side by side, found that the life of one was only half that of another, and that the third paint was between the other two in regard to durability. These three paints were made up of the same ingredients, containing 23 per cent. of sesquioxide of iron for coloring, and the balance of clay, silica, and sulphate of lime. The length of service given by these paints was in relation to the natural fineness of the constituents used. The best service was given by the finest, the poorest service by the coarsest, and the middle service by the medium class. The sesquioxide of iron in the first was in the form of a soft unburned ochre mixed with clayey matter, while in the others it was calcined and harder to crush. The less serviceable paints also contained silica and sulphate of lime, which both resist fine grinding.

The paint used in the first class had a longer life than paint made from white lead, white lead zinc oxide mixtures, and various oxide paints. The durability bore no relation to the cost of the paint, as the cheapest paint containing only 23 per cent. of sesquioxide of iron, with the remainder largely fine clay, gave better service than paint that cost more. This would show that the durability of paint depended upon the physical conditions of the ingredients, and not that a high percentage of iron was present. Thus, paint that was 100 per cent. pure, but coarsely ground, had little protective value.

Another case where a test of the preservative qualities of certain paints was demonstrated was that of a sandstone bridge that showed signs of disintegration. The stone work was painted with a mixture of pure linseed oil and fine inert matter with no iron or other coloring introduced. The body matter of this paint was thoroughly assimilated by the oil, and while the mixture was nearly transparent, the protection afforded was excellent.

The deductions from such tests would indicate that more than a chemical knowledge of the constituents of paints is required to determine the length of service; that it is not what is in the paint, or how it is ground, but of what degree of fineness is the natural condition of the body matter.

Engineers of late years have given considerable attention to the subject of protective paints for iron and steel, and have made many recommendations that have been investigated with good results in the laboratories of the manufacturers, and cases have been found where not only was the paint made of a better quality, but the cost was materially lessened.

CAUSES OF PAINT COMPLAINT.

Paint manufacturers have genuine ground for complaint in the general disposition of the public (and not a few painters as well) to blame the paint rather than the painter every time a job goes wrong, says the Paint, Oil and Drug Review. The fault may be in the surface to be painted; it is quite likely to lie in the methods used in the treatment of that surface and the choice of materials and manner of laying them on. In nine cases out of ten it is the workmanship and not the material that is to blame; yet the most convenient excuse for poor work is that the paint, varnish, enamel, etc., was "no good," and the paint itself, not being able to speak up in its defence, is wrongly blamed without recourse. In other words, the painter blames the paint knowing that it can't talk back.

This is one of the most difficult practical problems that the paint manufacturer has to deal with. To make a paint that will give perfect satisfaction under all conditions of use and abuse is impossible; to approximate to that ideal is the difficult task of the paint chemist. Not a few manufacturers in this country have succeeded in making paints, varnishes, enamels, water paints, kalsomines, etc., that with intelligent application will give excellent results and in ignorant or careless hands will yet do satisfactory work. But one thing the paint manufacturer cannot do; he has never yet succeeded in furnishing the painter with a new set of brains along with each can of paint. Until that is possible there will continue to be complaints of unsatisfactory work in the use of prepared paints, or even with the best lead and oil.

When trouble arises bear in mind that materials alone, or a mere combination of materials, are of no value unless properly applied. The paint in the can may be as perfect a mixture as science and skill can devise; but it will never paint the house satisfactorily unless it is intelligently applied. Skill and experience behind the brush must supplement the science and enterprise of the factory.

DO NOT

recommend the same material for finishing a floor that you would for a door. One is to be looked at and admired, the other is to be walked on, jumped on, has to withstand mud and water, furniture, pianos, sewing machines, etc., rolled over it and still be an object of admiration. Granitine Floor Finish for natural finish and Chijap Floor Lac for stained finish stand lots of abuse. They wear on the job, not off.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 4, 1906.

The market this week is characterized by increased activity in the paint and varnish trade. There is scarcely a line but what is feeling the stimulus usual to Spring; in fact, all over Canada the call in now, to ship immediately.

There is no change in the situation in Paris green, which continues to be both high-priced and scarce. White lead is in active inquiry and the advance lately recorded has been well sustained. Importers have advanced the price of zinc white 25c. per hundred lbs. for V.M., but jobbing prices remain the same as at our last report. Red lead is especially firm and shows an excellent demand.

Vermillions, coach colors, gold leaf and varnishes are all being shipped freely and as the manufacturers have been working hard all Winter it is not expected that any inconvenience will be experienced so far as the shortage o supply is concerned.

Prices on linseed oil are very steady and the tone of the market is high. Latest advices from England denote a remarkable scarcity of seed, which will account for present conditions in this market. The Argentine Crop is said to be very short this year and shipments from Calcutta and Bombay are also below the average. Some idea of conditions may be obtained from the fact that the total import of all description linseed into Great Britain, so far this year has been 148,547 qrs., as against 185,675 qrs. for the same period during 1905, and 255,567 qrs. in 1904. Canadian crushers just manage to keep a little under the English price.

Turpentine has shown no change during the week, although there is an impression prevalent in the trade that higher prices are imminent.

LINSEED OIL—We quote : Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 56c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 59c. to 60c.

TURPENTINE — We quote : Single barrel, 98c. per gallon; two barrels or over, 97c.; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

GROUND WHITE LEAD — We give prices as follows : Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65 ; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC — We quote as follows : Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote : Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5½c. to 6½c.

PUTTY—Our quotations are : Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows : Casks, 7½c.; 100-lb. kegs, 7½c; smaller quantities, 8½c.

RED LEAD—Prices are firmly held as follows : Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote : Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote : Pure white, $2.90 to $2.95 pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is firm at following prices : Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM—We quote as follows : American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—New prices have not yet been issued and meanwhile quotations can only be obtained from the manufacturers direct.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS— No shipments have yet been received on this side, but a large cargo of glass is expected within the next ten days, as one of the large liners is now loading over 2,000 tons for one of the large Montreal importing houses, at the port of Antwerp. Prices remain steady and we still quote as follows: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80 ; third do., $5.75 ; fourth do., $6.50 ; fifth do., $7.50 ; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24; and twelfth do., $28.50.

Don't Bunco Your Trade!

Stop and realize the immense possibilities gained in selling goods of merit.

Ark Brand Paint

will bring you self-respect and business growth. It is doing it for others and it will do it for you. **ARK** stands for the best there is in honest paint making. Sell Ark Brand Paint—"Canada's Best."

MURESCO continues to capture the trade.
Why don't you sell it?

THE FRANCIS-FROST CO. LIMITED
TORONTO, ONT.

Canadian Distributing Agents for Grippin's Crack Filler and "Muresco" Wall Finish

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

BERRY BROTHERS, Limited

VARNISH MANUFACTURERS

WALKERVILLE, ONT.

Write for our 100 page illustrated catalogue. Every dealer should have a copy for reference.

Results count in the business world and figures are unanswerable. Our Liquid Paint business which has doubled in a very short time proves that the CANADA PAINT COMPANY'S PAINT is the PAINT of the masses as well as the classes. Keats says, "A thing of beauty is a joy forever." A Paint of beauty is the houseowner's delight and the housekeeper's joy.

Floors stained with the CANADA PAINT COMPANY'S HANDY VARNISH STAINS are sweet and hygienic. Woodwork and walls painted with the CANADA PAINT COMPANY'S READY MIXED PAINTS are wholesome in the highest degree. Verandahs and steps treated to a coat of the CANADA PAINT COMPANY'S FLOOR PAINT lend distinction to the domicile and stamp the house as being in the front rank.

THE CANADA PAINT COMPANY'S OXIDIZED ART ENAMELS are suitable for every class of ornamental work. Color cards upon request.

The ALUMINUM PAINT made by THE CANADA PAINT COMPANY applied upon radiators and all metal work, stands out Clear and Silvery with telling effect.

To improve Carriages and Vehicles ask for the CANADA PAINT COMPANY'S LIQUID COACH COLORS or BUGGY PAINT.

The manufactures of this company appeal to a discriminating class of purchasers and we respectfully urge our friends to give prominence to the C. P. CO'S. Color Cards. They are our silent salesmen and by their aid and the co-operation of our Customers, we introduce the CANADA PAINT COMPANY'S COLORS everywhere.

We are not conceited enough to say "our Paints, Stains, and Varnishes are so good that they will sell themselves." Without the aid of our mailing advertising system, the storekeeper would undoubtedly dispose of a certain amount. We enable him by this liberal advertising to sell double and treble that quantity. Hence the more we sell the better for all parties and today the CANADA PAINT COMPANY'S manufactures are popular everywhere.

THE PAINT OF THE PEOPLE.

There is no paint manufactured that is so universally commended by expert and amateur painters as that made by THE CANADA PAINT COMPANY. Its superiority has led to a host of imitations.

Remember, "ONE COAT OF PAINT IN TIME SAVES NINE."

Do not delay in ordering from

The CANADA PAINT Company

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, May 4, 1906.

Reports from the turpentine belt in the south indicate that the recent easing of the market will not be of long duration and that for at least three or four weeks yet prices will remain firm. Last year about this time, or a little later, there was a rapid advance in turpentine with more favorable crop conditions than prevailed this year, but of course, a recurrence of these conditions cannot yet be said to be likely.

While linseed oil shows an upward tendency in England there are no changes in price here. South American and Indian seed are not coming into England in anything like the quantities of last year, and seed from the northwestern states is bringing a high price. With these conditions it would seem that the price of linseed oil will remain quite firm for some time.

WHITE LEAD—Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 560 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50, ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c., in 100 lbs., 7 1-2c.; No. 1, in casks, 6c., in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c., in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1.00 per 100 lbs.

WHITING—60c. to 65c. per 100 lbs., Gilders' whiting, 75c.

PARIS GREEN—Prices have been withdrawn owing to recent advances.

SHELLAC VARNISH— Pure orange in barrels, $2.80 ; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.; boiled, 1 to 4 barrels, 61c; 5 to 9 barrels, 60c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrel lots, 96c. to 98c. f.o.b. point of shipment, net 30 days. For less quantities than barrels, $1.05 per gallon will be charged.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c. ; finest American white, 19c. per lb. ; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2.00 to $2.10; bulk in 800-lb. casks, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.00.

CASTOR OIL—English, in cases, 8 1-2c. to 9c. per lb., and 10c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM—Prices continue unchanged. We quote: Canadian $1.36; Pennsylvania, $1.61; Ohio, 94c.

LEAD WORKS NOT FOR HALIFAX.

Reports have recently been appearing in the daily papers to the effect that the lead corroding works which will be established in this country by Brandram Bros., the English corroders, are to be situated in Halifax. As the original intention had been to utilize a site in Montreal which is held under option by Henderson & Potts, the Canadian representatives of Brandram Bros., Hardware and Metal called on Mr. W. H. Edwards, their Montreal manager, the other day to learn if there had been any change in plans.

"Nothing in it," said Mr. Edwards. "We have been delayed longer than we had expected in making final arrangements with the English house, but our Mr. Henderson, who is now in England, will probably complete them very shortly now. We will then go ahead and prepare the site referred to for the erection of the works. News of this will be announced as soon as the business has been settled."

When the new enterprise is finally launched, Montreal will have two lead corroding plants—the only ones in Canada.

WALL PAINTS.

Interior house decoration has undergone a great change during the past couple of years in favor of the use of wall paints. There are many kinds of wall paint in use, both water and oil, the latest being a flat oil paint that has met with approval from those who have made a feature of this work. Some paints are sold in paste form in various tints, and when mixed with linseed oil are used as a first coat and appear as an oil finish, but when thinned with turpentine it dries out flat, which is the most desirable finish.

There are many advantages in painted walls. Being easily washed they are more sanitary, and with the variety of tints and colors at hand, harmonious blending, and decoration to suit environment is obtained. The consideration of cheapness and the ease with which coloring can be changed from time to time are other points that have made wall paints popular.

Every dealer knows some houses and barns that need a coat of paint. Give the man a figure on paints for the job. A suggestion often makes these sales.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Wrench Manufacturers.

Wilfrid Ledoux, hardware merchant, Arnaud, Man., asks for the names and addresses of wrench manufacturers in Canada and the United States. He has patented a new wrench and desires to arrange for its manufacture.

Note.—The following are a few of the leading manufacturers of wrenches: Whitman & Barnes, St. Catharines, Ont.; Russell & Irwin, New York; Peckstow & Wilcox, Southington, Conn.; Bemis & Call Hardware Mfg. Co., Springfield, Mass.; Trimont Mfg. Co., Roxbury, Mass.; Billings & Spencer Mfg. Co., Hartford, Conn.; Bullard Automatic Wrench Co., Providence, R.I.; Keystone Mfg. Co., Buffalo, N.Y.; Walworth Mfg. Co., Boston, Mass.; Hawkeye Wrench Co., Marshalltown, Iowa.

* * *

Barn Door Track.

L. C. Karstedt, Mildmay, Ont., writes: Kindly inform me who makes or sells round barn door track.

Note.—The round track is patented by the Allith Mfg. Co., Hamilton, and manufactured solely by them, the demand for it being too limited for its production by other manufacturers.—Editor.

* * *

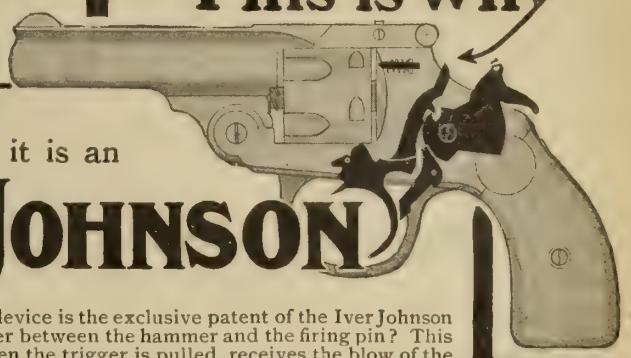
Dry Earth Closets.

McKelvey & Birch, Kingston, ask: Will you kindly give us the name of a manufacturer of dry earth closets? Or, failing this, some firm that handles these in Toronto?

Note.—The Toronto Furnace Company, 72 King street east, Toronto, manufacture this line.—Editor.

ATTRACTIVE ADVERTISING MATTER.

We are in receipt of some very attractive samples of well-illustrated advertising matter gotten out by the Copeland-Chatterson Co., Toronto, the work of J. S. O'Higgins. The greater part of the series is made up of folders, some of which designs are quite original



Perhaps the most attractive of the lot is a booklet styled "Business Epigrams." This booklet consists of sixteen pages of newsy, witty, crisp epigrams, interlarded with a pointed skit. Here are one or two: "A thing is worth what it does for me; and not what I pay for it." "The manufacturer who provides goods of better quality than his competitors, has no competitors." "Quality is always recognizable."

"Step Lively, Please!" is a "commanding" little "coverlet" printed in red and blue and containing a well-constructed analogy.

As these "C.C." specimens show excellent judgment in the matter of typography and paper, they would be well worth writing for as specimens.

Accidental Discharge Impossible—

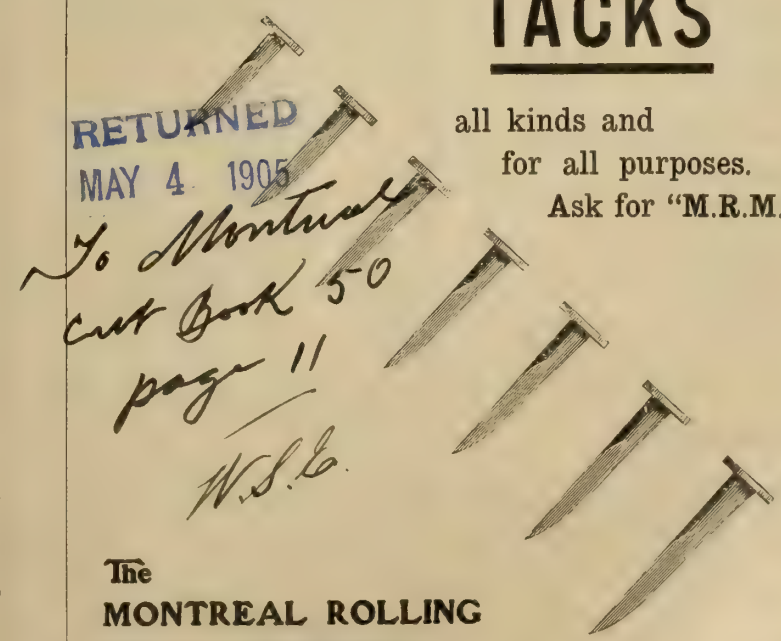
This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson **never** fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic



Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

N. A. Beach will build a saw mill at Georgeville, Que.

Regina has voted $37,550 for public improvements this year.

The Dow Cereal Co. contemplate building an oatmeal mill at Minnedosa.

The Calgary Milling Co. have let contracts for a 1,000-barrel flour mill.

Richmond, Que., has passed a by-law to raise $25,000 for a waterworks system.

Carman, Man., ratepayers will vote on a by-law to install an electric light plant.

Within eight months Fort Frances will have 30,000 horse-power ready for distribution.

The Warren Church Organ Co. has been organized at Woodstock to build an organ factory.

The Dominion Reduction Company's plant at Kenora was destroyed by fire. Loss $20,000.

Fort Frances, Ont., will ask the electors to vote $57,000 for waterworks and electric lights.

The Seaman-Kent Co., of Meaford, lost their dry kilns by fire, together with 100,000 feet of lumber.

The Toronto & Hamilton Sewer Pipe Co. had their Hamilton works destroyed by fire. Loss $25,000.

It is reported that American capitalists will erect a large flax mill at a point in Saskatchewan.

The Electrical Construction Company, London, has given an option on its plant to an American syndicate.

Madison Williams, manufacturer of mill machinery, Port Perry, contemplate establishing a plant in Lindsay.

The Maple Leaf Milling Company will erect a large mill and elevator at Kenora, Ont. Work will be commenced May 1.

North Battleford has become incorporated as a town and the citizens are taking up the matter of waterworks and sewage.

The Meisell Manufacturing Co., of Port Huron, will establish a plant in Winnipeg for the manufacture of milling machinery.

Owen Sound ratepayers passed by-laws to issue debentures to the amount of $45,000 to extend the gas and electric light plants.

The partially completed factory of the Henderson Roller Bearing Co., Toronto, is offered for sale by the Trusts & Guarantee Company.

McLeod, Alta., has offered the Gate City Milling Co., of Keokuk, Ia., a free site and tax exemption to build a 200-barrel flour mill.

The Western Electric Company, of Berlin, have added two large stamping presses to their plant, and other equipment for the speedy turning out of trunk trimmings, etc.

A. W. Cox, of Skagit county, Washington, has purchased a saw mill at Gibson's Landing, B.C. He will manufacture interior finishing.

Companies Incorporated.

The Dominion Office & Store Fittings Co. has been incorporated under Ontario charter with a capital stock of $40,000 for the purpose of manufacturing office and store fittings, etc. The provisional directors are D. H. Gillies, C. R. Somerville, J. McK. McDermid, T. H. Weldon and C. W. A. Woodburne, with head office at London.

The Nelson Hardware Company has been incorporated under Ontario charter with a capital stock of $40,000 for the purpose of taking over the business now being carried on in the same name, and continuing in the wholesale and retail hardware business. The provisional directors are A. E. Lech, Margaret H. Lech and Wm. J. Moore, with head office at Windsor, Ont.

BUILDING NOTES.

St. Boniface, Man., will build a $45,000 school.

Edmonton's building record for April is $200,000.

Gravenhurst, Ont., will spend $5,000 on sidewalks.

Winnipeg will build a new central police station.

J. Timbers & Son will build a hotel at Fort William.

James Clinkskill, Saskatoon, will build a $30,000 block.

James Carrick, Brandon, will erect a new residence.

Herbert R. Rugh will build a residence in Winnipeg.

Pembroke, Ont., asks for tenders for a new town hall.

A new Summer hotel will be built at Winnipeg Beach.

C. R. Duxbury will build a business block at Elkhorn.

The Hoidge Marble Co. will build a factory in Toronto.

A. Moote, Hamilton, will build five houses costing $8,500.

Moody & Co., Calgary, will erect a hotel to cost $10,000.

Carberry, Man., asks for tenders for an electric light plant.

J. F. Cairns, Saskatoon, will build a $36,000 business block.

A. J. Bloomfield will erect a residential block in Winnipeg.

Arthur Bros., of Port Arthur, will build a business block.

A. Bowerman will build a $65,000 bank and office building.

A three-storey building to be occu-

pied by the Merchants Bank and others will be built in Orillia.

Arnold Bros. & Ancaster will build a $75,000 hotel at Regina.

Alanson, Gulley & Co. will build a hotel at Vegreville, Alta.

G. W. Robinson, of Hamilton, will build a $6,000 residence.

The Phoenix, of Saskatoon, is having an office building erected.

James Burridge will build an apartment block in Winnipeg.

Young & McBeth will build a business block at Saskatoon.

Tenders are asked for a new building for the Stratford Beacon.

The Watt Milling Co. will build a new warehouse in Toronto.

James Carson, Dundalk, Ont., will erect a new business block.

A. M. Fraser will build a five-storey business block in Winnipeg.

The Western Elevator Co. will build an elevator at Port Arthur.

Kingston barracks will be remodelled and a new building erected.

Calgary is considering the building of a city hall to cost $100,000.

McCormack & Ludlow will build an apartment block in Winnipeg.

A. S. Bardal will build a store and apartment block in Winnipeg.

Saskatoon has a half million worth of buildings scheduled for 1906.

D. McBride will build three houses in house in Hamilton to cost $5,400.

E. J. Lennox, architect, Toronto, asks for tenders for a concrete garage.

The Maple Leaf Flour Mills Co. ask for tenders for mills at Kenora, Ont.

A new Gospel Tabernacle will be built in Hamilton to cost $30,000.

Gordon, Ironsides & Fares, Winnipeg, will erect a new office building.

The Bank of Hamilton will erect a new building at Stonewall, Man.

Thwaites & Spragge will build three houses in Hamilton to cost $5,400.

C. S. B. Burley, Portage la Prairie, commenced work on his new store.

Contracts have been let for the nurses' home, Winnipeg, for $60,000.

Regina will spend $49,800 on public improvements and $18,000 on a fire hall.

A hotel called the Wilson will be built in Saskatoon at a cost of $30,000.

The Canadian Rubber Co. will add two storeys to their Winnipeg building.

Vere Barton, Winnipeg, has prepared plans for a four-family flat to be erected.

Herbert Radford has let the contract for a five-storey warehouse in Winnipeg.

G. W. Hall, architect, Brantford, asks for tenders for a new Y.M.C.A. building.

Picton, Ont., School Board asks for tenders for heating the public school there.

Clark & Stuart, Vancouver, will com-

mence at once on a $65,000 business block.

Yates & Son, Hamilton, have commenced work on the new Hotel Hanrahan.

W. W. Wilson, Welland, will make extensive additions to the Mansion House.

The First Baptist Church congregation (colored), Toronto, will build a new church.

S. & H. Borbridge are having plans prepared for a four-storey block at Brandon.

C. W. Postlethwaite, Toronto harbormaster, asks for tenders for concrete wharfage.

Fusee & McFeetors, of Neepawa, Man., ask for tenders for a new hotel at Arden, Man.

The school district of Harding, Man., ask for tenders for the erection of a new school.

Saskatoon will have a new $25,000 school and a $12,000 addition to the present one.

W. J. Wade and L. H. McGuffin will jointly build a three-storey business block in Calgary.

Glass Houses.

DesMoines, Iowa, is the pioneer city to build houses and larger buildings of glass. The DesMoines Savings Bank, already begun, is to be ten storeys high and built entirely of steel and glass. Plans of a glass city hall are also receiving consideration from the council of this city, who think it would be a striking advertisement for the place.

JUDGMENT RE "RODGERS" CUTLERY.

Advices from Sheffield, Eng., contain information regarding an interesting suit which was recently decided in the Chancery Division of the High Court of Justice there.

The action, which has been under way since November, 1903, was brought by Joseph Rodgers & Sons, Limited, the well-known firm of cutlery manufacturers, against two gentlemen of the name of Hearnshaw, who carry on business in Sheffield. to restrain them from stamping or marking cutlery not of the plaintiffs' manufacture with the name "Rodgers" and "Rodgers Bros.," and from selling it under a name sufficiently similar to that of the plaintiffs, to deceive.

Mr. Justice Buckley, in giving judgment, said that for 200 years the plaintiffs and their predecessors in title had carried on the business of manufacturers of cutlery at Sheffield and elsewhere under a trade name of which the word "Rodgers" had always formed part. Their goods were known over a considerable part of the world. Under the circumstances, what he had to consider was whether the delendants' goods were so put on the market as that, in a retail shop, it would be easy for the retailer if he were a dishonest person to palm off the defendants' goods as being the plaintiffs'. He thought here the defendants had for a purpose so taken and used this word "Rodgers" as to put it into the hands of retailers to pass off their goods as the plaintiffs'. He therefore thought the plaintiffs were entitled to an injunction to restrain the defendants, and each of them, and his servants and agents, from so stamping or otherwise marking any cutlery not of the manufacture of the plaintiffs with the name "Rodgers," or "Rodgers Bros.," or any other name of which the word "Rodgers" forms part, and from so selling, advertising or offering for sale any goods so stamped or marked, and from so carrying on business in cutlery under the name of "Rodgers" or "Rodgers Bros.," or any other name of which the word "Rodgers" forms part, as to induce the belief that such cutlery or goods or business are the cutlery, goods or business of the plaintiffs, or otherwise passing off the goods or business of the defendants as, or for, the goods or business of the plaintiffs.

His lordship acceded to an application by the plaintiffs for an inquiry as to damages, and refused to stay the injunction.

GURNEYS WILL NOT BUILD.

A rumor has been in circulation that the Gurney Foundry Co. were aobut to build a plant at Vancouver, B.C., one paper stating that a site had been purchased and work was about to commence. The Gurney Co., however, advise Hardware and Metal that there was no foundation whatever for such a report, and that they have no present intentions of building in the west.

A *Quick* Shipping Service

Very often a profitable paint sale depends on whether the dealer can make prompt delivery. His stock may be low and he must have a quick shipment to secure the business.

The Sherwin-Williams Service to their agents is a great thing in just such times of need. We have facilities for handling rush orders quickly. We carry a complete stock of our products at all warehouses and can ship on short notice.

This is but one of the many advantages of ***The Sherwin-Williams Agency.*** It's the best paint and varnish proposition for the dealer. We place our organization and selling helps behind him and work for his interests in every way. Write *now* for full information.

FOR SALE.

1000 SQUARE FEET wire cloth, assorted sizes from 20-inch to 40-inch, at $1.30 per 100 square feet. Box 520, HARDWARE AND METAL, Toronto. [18]

HARDWARE, stove and tinware business for sale, including tin shop, tools, patterns, shop fixtures, wagon, ladders, etc.; stock will run about $6,000; situated in good live village, with excellent surrounding farming country; splendid place for two men, hardware man and tinsmith; good reasons for selling. Apply Box 524, HARDWARE AND METAL, Toronto. (21)

ROLLING MILL, bolt and nut works—the large and well-eqipped plant of the Louisville Bolt & Iron Works, Louisville, Kentucky. This plant is located in the centre of the manufacturing district for Southern, Western and Southwestern markets; situated in the southern part of the city, containing about 4¼ acres; directly on the main line of the L. & N. R. R., with proper switching connections to the packing room and for delivery of raw material, etc. Anyone buying and operating this plant will be exempt from city taxes for a period of five years. This plant contains 48 threading, single, double and triple and 14 tapping machines; 10 hot pressed nut machines, 16 bolt forging machines for varied sizes of bolts, with necessary equipment, such as hot blast furnaces, etc.; well equipped blacksmith shop; modern machine shop for repair work, etc.; 1 Belgian train with 12-in. roughing and 8-in. 5 stand, finish train; 2 large coal fired heating furnaces, each with waste heat boiler, with necessary hot bed, finishing shears, separate engine, pumps, etc.; 1 2-stand, 3-high 20-inch muck train, complete with squeezer attached, suitable engine to drive same; 8 busheling furnaces with waste heat boilers, 1 pair hot scales, muck shears, tools and other equipment. This plant has a full equipment of scrap shears and good facilities for handling material; 1 3-stand sheet mill, new and of most modern type to produce maximum product. This plant has ample power, containing 1 275 h.p. Hamilton Corliss engine for bolt and nut department, 1 engine and dynamo, a battery of 2 Atlas Engine Co. boilers and 1 Walton boiler, 1 Stillwell heater and all necessary shafting, pulleys, etc., for running same. A most complete and well arranged nut and bolt packing room. The above machinery is in good condition and could be put in operation without delay. The office is furnished with desks, vaults, safes, etc. This offer is a splendid opportunity for a very remunerative investment with very cheap fuel and water supply. A large pool of water in the plant will supply all of the water needed about the machinery. This is an opportunity rarely found for the manufacture of these products, being the best equipped and most modern of its kind south of the Ohio river. The sale of the property becomes necessary by reason of the death of the president and chief owner. This plant having direct switching connections with the L. & N. R. R., is also directly opposite and within a stone's throw of the very large and modernly equipped shops of the L. & N. R. R. Co., where a very large per cent. of the product should find a ready sale, besides the large local trade, including the Kentucky Wagon Manufacturing Co. For further particulars call on or address The Fidelity Trust Company, Louisville, Kentucky, until the 16th day of May, 1906, at which date the property will be sold at auction on the premises.

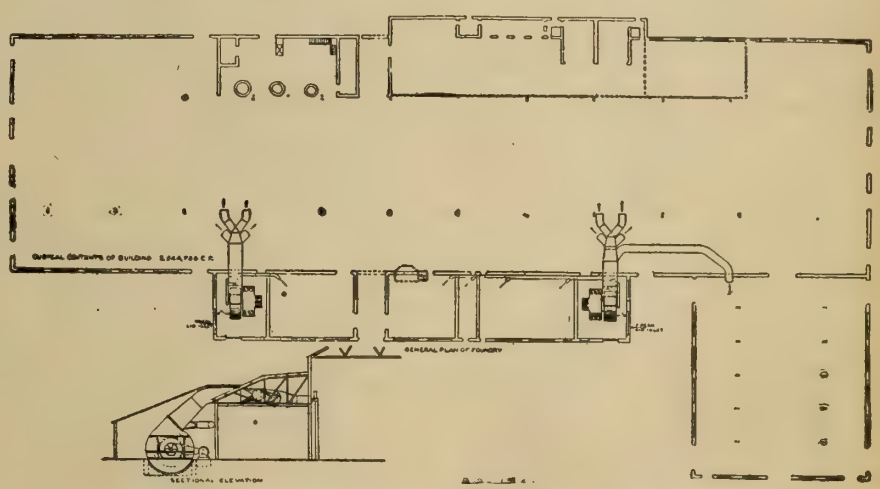
PLUMBING AND STEAMFITTING

HEATING AND VENTILATION OF FACTORIES

From Canadian Machinery.



Methods adopted for supplying and distributing the air in buildings are worthy of considerable attention. The usual methods of supplying heated air are: first, to take the air entirely from without doors and force it directly into the building through distributing ducts. This method is generally known as the plenum system. The pressure produced in the building causes a continuous exit of air from the building, either through the natural openings, as is usually the case in factory and other large buildings, or through special vent openings provided for the purpose, as in public buildings.

A second, and more common method for shop buildings where forced ventilation is not a necessity, is to draw the supply of air entirely from within the building and again force it through the distributing ducts, causing a continuous circulation of the air within the building. This often has an advantage over the plenum system in that all the heat supplied to the air is effective in heating the building.

Some Adaptations.

The ideal system is a combination of the plenum and return systems. This should be used wherever possible. In this system the greater portion of the air is returned to the apparatus, but sufficient air is continuously taken from without through a fresh air connection to create a plenum within the building and prevent the inward leakage of the cold air along the floor.

Excellent results can be secured by the use of overhead piping, providing it is not placed at too great distance from the floor. The chief advantage of the overhead system is the saving in first cost, since, on account of the high temperature and velocity of air in the distributing pipes, a great amount of heat can be transferred with a very small amount of material. The cost of the galvanized iron distributing system of air ducts is relatively small. The best results are secured with outlets at from 12 to 18 feet above the floor line. Above this height it is preferable to use drop pipes extending downward along the columns where they will not interfere with traveling cranes. Such an arrangement of overhead piping is frequently employed in foundries, while in large machine shops underground ducts are nearly always preferable. Another system which has proved very satisfactory is that in which a distributing air return duct is employed. This approaches very closely in principle to the plenum system used in public buildings, and is a combination of both plenum and exhaust systems. The peculiar feature in this is that no distributing ducts or piping for the heated air are used. The air is blown at a comparatively high velocity directly into the building at about 8 or 10 feet above the floor through an outlet branching in three directions, and through which the air passes at a comparatively high velocity. The distribution is effected entirely by the return vent ducts which are placed at frequent intervals along the walls. These open into large return air channels which are provided on either side of the building and serve the additional purpose of affording a convenient place for locating steam and water mains, and also electric light and power mains. Provision is made for taking a portion of the air from without doors to secure a plenum. One great advantage of this plan is that it removes all cold air leaking into the building at the floor line, and that produced by the cold down draft next to the walls, as well. A perfect distribution is secured in all parts of the building, and the cost of installation is reduced to a minimum. In small buildings a system of distributing outlets is placed along the further side of the building, and a system of vent ducts opening into exhaust chamber is placed on the side adjacent to the fan. In many instances an elaborate distribution is impracticable or undesirable. In such cases a centrally located discharge pipe may be used. From this point the air is blown in all directions and a circulation is produced by an exhaust connection to the fan inlet. In such instances very effective heating has been secured even where it was required to blow the air long distances. A good example of such a system may be found in the foundry building of the General Electric Company at Schenectady. This foundry, which is probably one of the largest in the world, is heated in an entirely satisfactory manner with a few large branch outlets.

Type of Foundry Heating Apparatus with Small Amount of Distributing Pipe.

The chief points of excellence of the fan system may be summarized as follows: 1—Perfect ventilation, regardless of exterior conditions. 2—Uniform and proper distribution of heat. 3—High efficiency of heating surface, (three to five times that of direct radiation). 4—Greatest economy in operation. 5—Utilization of exhaust steam. 6—Prevention of cold drafts from without by production of a plenum. 7—Independent regulation of heating and ventilating effects. 8—Central location of plant, requiring a minimum amount of attention. 9—Great flexibility in operation to suit varying conditions. 10—Low cost of installation.

GAS HOT WATER SYSTEMS.

Address by H. J. LONG before the National Commercial Gas Association in New York.

The gas hot water system can roughly be divided into two general classes: (1) Storage system; (2) instantaneous gas water heaters. Taking up the first, coal can be and is used largely with success; with the second, gas is an absolute necessity. This would lead one to inquire therefore what objections there are, if any, to the increased use of the instantaneous heater by gas companies, thus obviating the competition of coal altogether?

There are several manifest advantages to be claimed for the tank system of heating: (1) Low first cost; (2) low installation cost; (3) the ability to suit conditions in old houses with the least possible changes in plumbing arrangements. Probably nine-tenths of the old houses are equipped with a range boiler varying in size from 30 to 60 gallons. This in conjunction with the coal range water back proved to be all that could be desired, but with the advent of the gas range, with its wonderful cleanliness and convenience, the hot water problem was a serious one. Many gasmen have stated that one of the most serious difficulties encountered when gas stoves were first introduced was the very one of taking care of the hot water supply.

The first attempts to solve this resulted in the gas water heater attached to the side of the gas range. This, owing to its construction with horizontal water pipes, proved a failure, inasmuch as the efficiency obtained from the gas amounted to only 10 per cent. and in many cases it would not heat the tank under any conditions. The logical results of this was the development of the independent tank heater, which was designed for heating the water in the tank and for nothing else. This is the system with which nearly every one is familiar to-day. These heaters are being made of various material by various manufacturers—namely, cast iron sections, brass sections and copper tubing. It is not the object of this paper to discuss the relative merits of these constructions, for in nearly all of those of first-class make the efficiency will run from 40 to 70 per cent., thus giving a fine return for the money invested in convenience and economy.

There are some disadvantages in this system to which we would call your attention. In the first place, the supply of hot water for any one time is limited to the capacity of the hot water tank. A 40-gallon tank will give one hot water bath, one tepid and then a wait is necessary until the water is again heated. In actual use it will be found that the tank heater is used merely as an auxiliary as with manufactured gas it is too expensive a proposition to keep the heater going constantly to maintain the tank full of hot water, as numerous tests have proved that the cost in gas alone to keep the tank full of hot water is far greater than it would cost to heat the water actually used instantaneously. The result of this is the use of gas in such a tank heater for hot water purposes only when a fairly large quantity of hot water is desired, such as for the bath or laundry, and in the hundred and one little household duties requiring hot water, such as dish washing and for the basin, the gas heater is not used, the result being a small gas consumption and poor service.

The Instantaneous Heater.

The instantaneous heater was first conceived as a small machine to set in the bathroom and furnished a very limited supply of hot water for basin and bath. This also has the advantage of comparatively low first cost and it is exceptionally economical in operation, as no storage is required, and the gas is used only to heat the water actually drawn, giving an efficiency of nearly 80 per cent. This system has done well and is very popular, but has the one great drawback of being limited to one place. The ordinary heater requires the constant supply of matches as well as gas, so that it is seldom used for the wash basin, owing to the necessity of lighting it each time for one or two gallons. Moreover it is seldom used for kitchen or laundry, thus limiting its gas consumption to a very small part of what it would be if it supplied the entire house. Another serious disadvantage to this type of heater has been that the Bunsen flame requires a flue, and a very small percentage of the bathrooms are equipped with such.

We come, then, to the automatic instantaneous heater, which would seem to supply or take care of the many disadvantages of the other systems. This is the small instantaneous heater amplified to give a capacity which will heat the water as fast as it would ordinarily run through the faucet, and an automatic attachment is designed to turn on and off the gas as the faucet is opened and closed, the main burners being ignited from a small pilot. This system furnishes an unlimited supply of hot water always at the same temperature and at every faucet in the house.

Every time a hot water faucet is opened some gas is used. A small quantity for the basin, a gallon for the kitchen sink or 20 gallons for the bath mean a certain percentage of gas used in the heater. The result is increased gas consumption, but with full value received for every foot of gas used, as the efficiency of the first-class heater is 80 per cent. and over. Moreover the use of such a heater places the hot water entirely independent of the use of coal or any other fuel, thus leaving the gas stove salesman a clear field to install the gas stove and other gas heating appliances.

May I cite an instance showing the application of this? A very large residence having four baths, needle shower, etc., was using gas merely as an auxiliary for lighting, as cooking and hot water were all furnished by means of coal and the lighting was done by electricity. Fifty cents a month would probably cover the average gas bill. A large automatic instantaneous heater was installed to take care of the baths and shower. The first month's gas bill was $18 and each month has averaged in that neighborhood. On the face of this the householder has expressed in glowing terms the service received and considers his gas bill small in return for the magnificent results which he now obtains. In fact his magnificent plumbing work and beautiful shower was of small value to him for the simple reason that half the time he could not get hot water to run them. This, of course, is an extreme case covering a very large residence, but it was in a place where the man was willing and able to pay for the service which he got. In the smaller residences, having limited consumption of hot water, the service and gas bills are in proportion.

First Cost of Instantaneous Heater.

Referring now to the disadvantages of such a system, the greatest objection raised is the first cost. People hold up their hands in holly horror at the idea of paying $100 or $125 for their hot water supply. True, when compared with the ordinary system in vogue or the water back in a coal range, it does seem high, but this item is purely one of education. When the modern plumbing fixtures were first introduced I was identified with the plumbing business. The copper tub then in vogue cost about $8 to $10 and was pointed to with pride by the householders. When the modern closet and enameled tub came on the market at a price of about $40 each a spasm was created in the trade to think that any one would pay such an amount of money for bathroom equipment in comparison with the old appliances, which were good enough for them. Such a price was only for the Carnegies and Vanderbilts. But what a difference in a few short years! To-day you cannot go into a house costing $1,500 but what you find these very same appliances. In fact the renter, whether expecting to pay $15 a month or $150 a month, makes a bee line for the bathroom to see whether there are modern plumbing fixtures, which have probably cost over $100 to install. Why, then, should $100 or $150 for such a house be considered extravagant for that absolute necessity—hot water service? When it is once demonstrated and shown to the average citizen that he is getting full value received the price would be a secondary consideration. Mechanically the automatic instantaneous heater has reached a perfection unthought of a few short years ago. A system now properly installed under the right conditions will give a maximum of service for a minimum of attention.

To show the difference in the efficiency and gas consumption of the tank system as against the automatic instantaneous there was a test recently made which should be of interest to all gas men. A 40-gallon copper tank was set up in conjunction with a copper coil tank heater and a small thermostat. At the side of this was placed a 40-gallon automatic instantaneous heater, which is the size for the ordinary residence having bath, kitchen and laundry. The total volume of water drawn from each system as shown by the water meters was 3,225 gallons. The gas consumption for the automatic was shown to be 3,280 cubic feet, and in the tank system 9,072 cubic feet, making a difference in

favor of the automatic heater of 5,791 cubic feet for one and a half months, or nearly three times as much as gas. This would show that with exactly the same service, 75 gallons of hot water a day whenever wanted, the automatic instantaneous heater used nearly one-third of the gas required by the tank system. In view of this it would be manifestly impossible for many consumers to attempt to have a continuous hot water supply with their tank system, the result being, as before stated, that the gas is used only occasionally with poor service. There is also one point to be noted, and that is the capacity of the tank system was at all times limited to 40 gallons in any one hour, so that if it had been desired to draw 75 gallons at one time it would have been impossible with the tank system, while with the automatic instantaneous it could be drawn continuously or not, as desired.

WORN THREADS.

Building up threads which are cut too deep, as is often the case in brass goods, particularly in boiler spuds, is one of the odd jobs a plumber must do on occasions, as well as building up threads which have been worn down owing to long use, writes D.F.N. in the Metal Worker. This may be accomplished by covering the brass thread with powdered paraffine from a paraffine candle or with acid and then dipping the exposed thread into the soldering pot, or, better still, holding the thread over a pot and pouring hot solder over it. In this way it will receive a good coating of solder and the coating will make the fitting screw snugly into the pipe. This method can readily be applied to loose or worn parts in the interior of barrels of ball cocks, as these when under a heavy pressure often vibrate and make a whistling and groaning noise. If the outside of the barrel on the ball cock is coated with solder, then clean off with a fine file or emery cloth, it will fit more snugly into the cylinder and the noise will cease.

REDUCING GAS PRESSURE.

Reducing the pressure of gas so that less will be consumed in bathrooms and hallways can be done by the old trick of putting cotton under the burner tip. It can be stuffed into the pillar that a flame of any desired size can be readily obtained.

PLUMBING ITEMS.

One hundred journeymen plumbers at Hamilton went on strike on May 1. They ask for 35c. an hour, an increase of 2½c. St. Catharines and Fort William plumbers are also on strike for increased wages.

B. Willett, Toronto, is installing a plumbing system in a residence at Oakville, the water to be procured from the lake by a gas engine and piping system.

NEW PIPE YARD.

R. J. Cluff & Co., Toronto, have secured property 90 by 150 feet, closely adjoining their new building on Lombard street, which will be used as a pipe yard. They will erect sheds upon it.

PLUMBING MARKETS

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 4, 1906.

There are no new prices in plumbing supplies this week. Everything seems to be steadied pretty well on account, no doubt, of the business increase. But while business may be considered good there is not the amount of work on hand that usually characterizes the opening of Spring. Ordinarily with the coming of cold weather plumbing work ceases and Spring finds the trade with unfinished contracts on hand, but having had a mild Winter this condition was not noticeable.

Toronto plumbers still feel a slackness that does not seem in keeping with the building operations that are going on and a lot of price-cutting is the result. A better condition, however, must shortly obtain.

LEAD PIPE—A constantly increasing trade is felt in lead pipe. Prices the same. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS — The volume of business being done is very heavy all over the province. Prices remain the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—The price of iron pipe holds firm at the recent advances, and a heavy trade is being done. We quote: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—A difficulty is found in getting enough to supply the demand. Prices continue same as previous quotations. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS — This line shows a marked increase in sales both in present and future delivery. There are no price changes. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14.00; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Business is picking up with the advance of building operations. We quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER—Solder holds firm at the present prices and a large amount is being sold. Bar solder, half-and-half, guaranteed, 23½c., and wiping at 21c.

ENAMELWARE—Jobbers still find a difficulty in getting enough baths to fill orders. No price changes. We quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 4, 1906.

Early opening of navigation has been a great boon to the supply houses. Since the boats began to run shipments from Montreal have been very large, and as as they have got away so much earlier than in previous years, dealers are looking for repeat orders to be very numerous before the season is over.

The activity which is evident in the plumbing trade, extends over all the lines quoted and no one in particular could be picked out as monopolizing the attention of dealers.

In iron pipe the market is firming up decidedly. Jobbers could not now replace their stocks in many sizes for the figures which they are quoting their customers and there is every reason to believe that an advance in prices cannot be long delayed. There is at present an active inquiry for galvanized iron pipe for use in installations for water supply.

RANGE BOILERS—Sales are large and prices steady. We still quote: the following prices: Iron clad, 30 gallon, $5.00; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

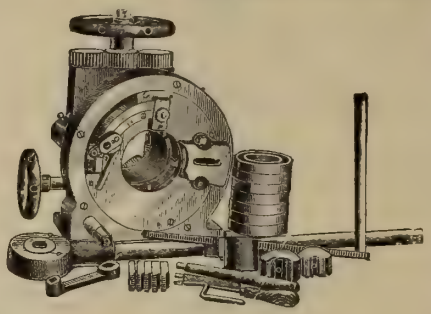
LEAD PIPE—No change in prices is reported, the fluctuations in the primary market rendering early advances unlikely. We still quote: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred

lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—There is a very large inquiry for these goods. We quote discounts on all sizes of nipples up to 6c., 67 1-2c. to 70c.

IRON PIPE— The market is much steadier than it has been for some months. Indeed many jobbers state that they are looking for advances in the wholesale prices. In the meantime we are quoting as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $550; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50;; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS— This line is showing general activity of the plumbing market. Our quotations remain as follows : Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.



SOLDER—Although tin is still soaring, prices on solder have not been advanced. We still quote: Bar solder, half-and-half, guaranteed, 22 3-4c. to 23c.; No. 2, wiping solder, 18c.

ENAMELWARE—The call for these goods is constantly increasing with the advance of the season. Our prices remain as follows : Canadian bath tubs, plate E1 , 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special, $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

CUT-OFF VALVE FOR GAS OR OIL BURNERS.

A. Ashcraft, Fort Smith, Ark., has invented an improvement which relates particularly to cutting off the fuel or illuminating supply from gas or oil burners. The object is to provide a valve of the character stated which shall not only be simple in construction and adapted for ready attachment, but after being set or opened for supply of gas or oil the burner operates to automatically close the valve, cutting off the fuel-supply should the gas or oil cease to burn.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

—buy branded pipe you're sure then—

Simply putting the brand on the pipe doesn't make it better pipe——

Unless we put the "better" into the pipe first, we'd not DARE brand it.

That brand, put right into the metal every three feet while the pipe is hot, means we guarantee the pipe's quality.

"Guarantee" means all that it ought to mean to you—and that's a lot.

Maybe you think our prices for P-H pipe show the quality we put in the goods? They don't——

This better pipe costs you just as much as the kind you buy WITHOUT any guarantee—and that the makers aren't sure enough about to brand.

Will you read the book that makes the whole story plain?

Glad to send you a copy as soon as you ask.

MUELLER WATER STRAINERS

PATENTED

C 109

When the water supply comes through the water works filter, plumbing fixtures are very well protected from sediment; but it occasionally comes direct on account of the filter being out of order or in cases of fire, and something is needed to protect the fixtures then.

The Mueller Water Strainer will strain the sediment out of unfiltered water. It gives protection to the plumbing fixtures on all occasions, whatever the condition of the water supply.

The Mueller Water Strainer is made of cast iron, has a brass gauze screen and brass plug, and is made for all sizes of pipe up to 3 inch.

Each strainer is carefully inspected and assembled, bears the Mueller trade mark and is *unconditionally guaranteed*

Business Getters for Tinsmiths

Are there any defective chimneys in your locality?

Then it is your chance to get business.

THE

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft, and, therefore, easy combustion.

By using the ZEPHYR, it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM.

This is what others think of it :

Montreal, February 20th, 1901.

Providence Mother House.

Messrs. Harris Co., Limited, Montreal.

Dear Sirs,—It is with pleasure that I can say your "Aeolian" Ventilator is the best Ventilator we have used on our establishments so far. We have eight (8) of the large sizes put up on our Mother House and on the Hospice Gamelin and they give us entire satisfaction.

Yours respectfully, SISTER MADELEINE, Dep.

We manufacture and guarantee :

The Harris Filter
The Aeolian Ventilator,
The Zephyr Ventilator,
Expansion Conductor Pipe.

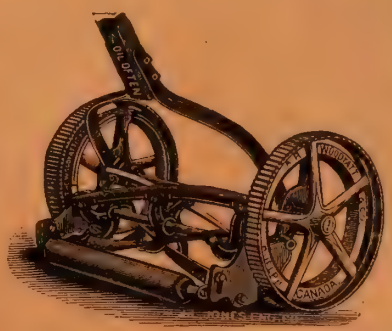
Keep Your Hand on Quality

The moment shoddy-material Mowers get into your store, that moment reliable trade goes out.



It doesn't pay to trifle with quality. That is the reason the majority of jobbers prefer to sell our

LAWN MOWERS

They know that when a machine with our name on is sold, such machine is guaranteed to give satisfaction. And, what is more, they know from experience that the guarantee is always true.

Your trade is your asset. Show the customers that you guard their interests by recommending our Mowers.

We have issued a beautiful Catalogue. Tell us to send you one.

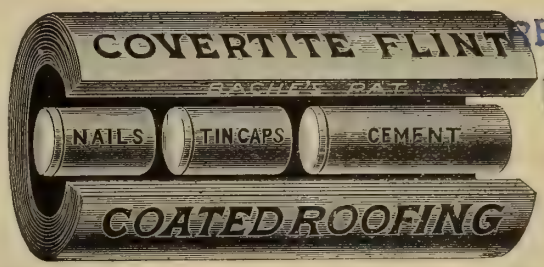
"COVERTITE" FLINT COATED READY-TO-LAY ROOFING



USED ALL OVER THE WORLD

We can fill any sized order, from one to one thousand rolls– promptly.

Do your customers ask for "good goods," or is it some thing at a low price that you have a trade for? If the former we recommend to you, our ***"Covertite Flint Coated Roofing."***

There is a large demand for a better roof, one that does not require painting when applied; one that will wear for years with little attention and one that appears well.

We have investigated the proposition thoroughly and found that we could import and improve roofing (one that is being sucessfully used in all parts of the world) at a price that enables us to sell it in competition with the cheap tar roof.

Roll split open, showing Nails, Caps and Cement packed in core.

The base of ***The Covertite Flint Coated Roofing*** is a wool felt, every thread and fibre of which is saturated with a special waterproofing and preserving compound. The fabric is then covered on both sides with a coating of rubbery gum, made from the heavy part of palm and cocoanut oils, and is then compressed into a compact sheet. It is put up in rolls, 36 inches wide, containing 108 square feet—enough material to cover 100 square feet (or 1 sq.), allowing two inches for lapping at the joints.

In the core of each roll is packed a can of liquid cement for the laps, and caps and nails for applying the roofing. The rolls are wrapped in heavy manilla paper and the ends are sealed with a disc of the roofing and heavy muslin which assures delivery in perfect condition, and are clean and nice to handle.

The only tools required to apply the roofing are a knife, hammer and small brush.

"Covertite" Flint Coated Roofing is water, acid, gas and rat proof. It is suitable for all kinds of buildings, is easily put on, and is not expensive.

If you had a stock you couldn't help but sell it. Write for samples and prices, and let us know how many rolls you are prepared to buy—we may have a good proposition to submit to you

RETURNED

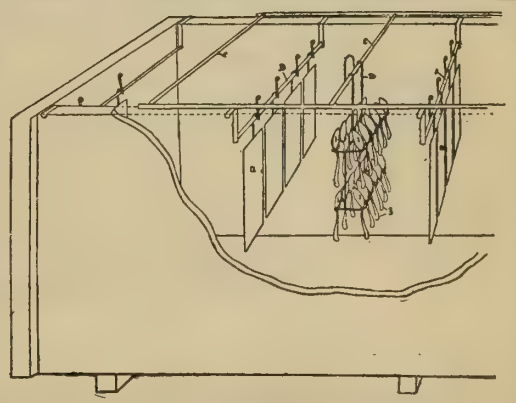
METAL SHINGLE & SIDING CO., Limited

PRESTON, ONTARIO

AN IMPROVEMENT IN SILVER PLATING



How **The Toronto Silver Plate Co., Limited,** increases the thickness of Silver on the wearing points of Spoons and Forks. A scientific test showing its practicability.

WHY ? Because more Silver is deposited upon the wearing parts.

This sketch illustrates a Plating Vat, and explains how we deposit silver on the wearing parts. D. represents rack loaded with spoons suspended from rod C. A. represents silver; 2 and 3 the backs of spoons, where the most wear comes. The backs being nearest the silver receive the deposit of plate faster than other parts, this insuring a heavier plate than the same grade of goods in the usual methods by other manufacturers.

Goods plated by this patent process give you 20 per cent. more wear.

In buying Silverware insist on it being stamped **"Toronto Silver Plate Co."** as the name guarantees the quality.

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.
Dept. J, Hamilton, Ont.

KEEP THIS FACT IN MIND

Wire Fencing is of no value to your store unless it sells consistently. That is all you stock it for.

To sell consistently, wire fencing must have a consistent record. There's where the

Dillon Hinge-Stay Field Fence

scores a bull's-eye. It has never "gone back." It has never "missed anything" worthy to be considered an improvement. Its makers have never deviated from the principle, "To the owner belongs the fence, not the repair shop."

Once you sell the "Dillon" you make customers for hardware necessities.

We have a Booklet fully describing "the best-of-all wire fencing." Send for copy.

Emlyn Engineering Works NEWPORT, MON., ENGLAND

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell
THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

HARDWARE CONVENTION NEXT WEEK

No Live Hardware or Stove Retailer can Afford to Miss the Gathering

"Of course I'll join the association. Here's my $2 fee," said a prominent Western Ontario hardwareman who called on Hardware and Metal this week. "I'll willingly give $50 if the organizer can visit out town and induce my only competitor to join the association and work along association lines. I cannot do it myself, but an outsider might be able to get us together and end the foolish price-cutting being indulged in." The speaker added that he was a member of the Retail Merchants' Association, but he wanted to see a distinctly Retail Hardware Association organized.

In this his position was in agreement with many dealers in St. Thomas and other Western Ontario towns and cities, many of whom, speaking to Organizer Hodson, said that while they would probably continue as members of the Retail Merchants, they wanted to see the Hardware and Stove Association remain entirely separate from the Retail Merchants' Association, which was chiefly a grocers' or druggists' organization.

A Steady Growth.

There is nothing phenomenal to report in the increase in membership this week—just a steady growth from different parts of the province. Wherever the organizer has gone he has enrolled the leading men in the trade, and already in several good sized towns and cities practically the entire trade have become members of the association. With a few fullv organized towns to commence with the Ontario association is given a good standing, and the work can be pushed more aggressively after the convention.

A slow steady growth is much more satisfactory than if members tumbled over each other to join the association. As was pointed out at the Good Friday convention, every organization that has ever lived and won a name for itself was started by a few men who meant business, and the organization grew gradually. A mushroom growth is always followed by a lack of interest and rapid disorganization.

Last week about 50 members were reported as being enrolled in between 30 and 40 towns and cities. The end of the present week will see over 80 enrolled in about 60 different localities. Some of the towns not reported last week, which are now represented on the membership roll, are Dashwood, Florence, Goderich, London, Merlin, Markham, Niagara Falls, Newmarket, Orono, Rodney, Ridgetown, St. Thomas, St. Catharines, Tilbury, Thorold, Watford and West Lorne.

More will be on hand at the convention and sign the membership roll at that time, and 100 is certainly a conservative estimate of the number that will be enrolled before the convention closes its sessions next Wednesday afternoon. With over 100 members, the new officers of the association, whoever they may be, will have a sufficient moral force behind them to bring about many changes of great financial value to the membership.

Some Members Help Materially.

One hardwareman who sent in his membership this week wrote: "I include my firm's subscription, and hope to forward you those of the two other hardware merchants of this place." Another wrote stating that one of his competitors had failed to receive a membership blank, and asked that one be forwarded so that he could have an opportunity to sign. This is the kind of work necessary to make the organization a success. While the officers are doing all they can, they cannot be expected to do it all—the local merchants must do their part. That they can do so is well illustrated in the address delivered by a delegate to one of the association meetings in the States, and reproduced in this issue. City and country associations should be organized to complete the work of the provincial organization.

That the trade is already benefiting by the organization of the association is certain. Organizer Hodson reports that in one town not far from Windsor he found the hardware merchants selling nails at $2.20 all round. He got them together and arranged the price at $2.50, and both dealers joined the association. In other places he has done equally good work, and the results of his trip are bound to result in fostering a more fraternal spirit amongst the hardware merchants.

Wholesale and Retail Prices.

Reports of price cutting are general, five-inch nails being sold for as low as $1.95 in Toronto, with $2.05 for three-inch. With a base price of $2.15 quoted by the jobbers, it will be seen that the houses making the cut are going after the builders' hardware trade, using nails as the bait. And if reports are true the fish are biting very well, and the ordinary retailer who fishes for business in the same waters as these price-cutters gets very poor strings of fish, and is forced to go hungry. This condition is responsible for a large number of retailers going out of builders' hardware almost entirely, taking up housefurnishing lines instead.

Another instance where the ordinary retailer gets the worst of it is instanced by the story of an Ontario hardwareman, who wanted to put in a tender for corporation supplies. In order to be certain about his figures he went to the wholesale department of a house doing both a jobbing and retail trade. He was quoted the association price on the lines required, but what was his surprise when he learned the result of the tenders—the contract going to the retail branch of the jobbing house's business at prices less than quoted by the wholesale department.

Evils such as these can be discussed in association meetings and reasonable men can be shown that price cutting is harmful to all. Unorganized, conditions must continue to grow from bad to worse, but if any remedy is at all possible it can only be secured through organized effort.

Convention Dates.

Several members who have enrolled have pointed out that the date set for this convention was a trifle too early, and that more would have been able to attend had the date been set for the middle of June instead of the middle of May. Others say they would be equally as busy next month as now. In any case the date set at the convention must be adhered to, as there is not time available to announce a change to the trade.

From many standpoints, however, a later date would have been more satisfactory, as the work of organization is now only nicely under way, and had the executive and organizer another month to work they would be able to report fully 200 members as being enrolled.

From the number who have promised to attend the convention, however, it is assured that there will be representative and business-like gathering, and the opportunity presented the retail trade to get better acquainted with the jobbers at the complimentary dinner being tendered the retail association by Hardware and Metal should induce many to attend and get better acquainted with those with whom they do business.

Seldom has there been such a splendid opportunity for Ontario hardware

CONVENTION AND BANQUET

In the rush of getting out the invitations for the Complimentary Dinner to be tendered by the staff of Hardware and Metal to the Retail Hardware and Stove Dealers' Association of Ontario at the King Edward Hotel, Toronto, next Tuesday evening (May 15) at 6.30 p.m., some mistakes may have occurred and some dealers overlooked.

To avoid any misunderstanding let it be clearly understood that every member of the Association and every retail hardware or stove dealer in Ontario who is a subscriber to Hardware and Metal is cordially invited to be our guest on this occasion.

All who intend being present are requested to forward their reply to the invitation at once so that the proper seating accommodation can be arranged for.

and stove dealers to spend such a profitable and enjoyable couple of days, and it should be fully taken advantage of by every merchant who has the interest of the trade to heart. Let there be a rousing gathering in Toronto next Tuesday and Wednesday, so that the entire trade can look back to these days as marking an epoch in the history of the hardware and stove business in Ontario. Western and Northern Ontario are certain to be well represented. Will Eastern Ontario take hold, or will the trade in the east have to wait until an organizer calls upon them to point out the advantages of working together.

Details Being Arranged.

Particulars of the special rates available on the railways have already been given. As it is certain that over fifty will attend the convention delegates will pay single fare to Toronto and return for one-third fare by the same route. But delegates must ask their local ticket agent for a certificate. Without the certificate full return fare will be charged.

The arrangements provide for delegates leaving their homes three days prior to the convention, and returning three days after it closes (Sundays not counted). Tickets can, therefore, be procured on May 11 or 12, and return not later than May 19.

The Rossin House, Toronto, quotes a special rate to delegates of $2 per day, while good rooms can be procured at the Imperial (King and York streets), and other near by hotels, for $1 per day. The convention will be held at St. George's Hall, Elm street, just west of Yonge and midway between Queen and College streets. Winchester, Yonge and College and Yonge electric cars pass within a stone's throw of the hall.

BENEFITS OF LOCAL ASSOCIATIONS.

At the last convention of the Retail Hardware and Stove Dealers' Association of Wisconsin, Emil Teitgen delivered the following interesting address :

The benefits of local associations are numerous and important both from a social and economical point of view. We all agree that our state association is beneficial to every hardware merchant in this state, whether he is a member thereof and contributes to its support or not. I contend that the benefits of local associations far exceed those of the state association, but the local association is conducted on narrower lines and benefits its members only.

I believe that every county and community in the state should and can have its local hardware association. Many of you will say : "This is impossible in my town. My competitors are too mean to associate with and they will not be trustworthy in any agreement." This is a mistake. Others who have tried it can tell you in their town where competition was as fierce as anywhere and their competitors the meanest in the land—cutting prices on staples until profits were eradicated, doing everything in their power to hurt the other's business and character, buying a few stoves of the lines handled by the other stores and marking them down to cost, etc., associations have been formed and maintained for years to the substantial benefit of every member thereof.

Gentlemen, what are we in business for ? We invest our money, take chances, work, scheme, speculate and exert every faculty for what ? The profit ! This profit and compensation for our efforts can best be attained through local organization. It may be difficult in some places to get together, no one wishing to take the initiative, and it may require an outsider to start the association, but after it is started each member will soon find that his competitor is not nearly as mean a fellow as he thought and before many meetings these old enemies will become friends, working in harmony and correcting many abuses. "In union is strength."

Protection Against Dead Beats.

The easiest way to get together is to form an association for protection against poor accounts. Every community has its quota of dead beats and it is a fact that in some towns one or more of these fellows owes every hardware store—made possible only by fierce competition. Almost every business man is willing to join an association for this protection. The public who will learn that you have a hardware association should be informed that it is for protection against poor accounts, thus enabling you to compete with the cash store, and there will be no prejudice.

After the association is formed each member should make out a list of his poor and dead accounts, and at the meeting have them all alphabetically arranged in a book for each member. Keep this book handy and when Mr. Poor Pay asks for credit tell him : "Mr. P., you owe the Smith Hardware Company $2.50, you owe John Hues $4, and you owe Jones & Brown $5 and we can give you no credit until these bills are paid." Mr. P. Will become indignant and tell you he has unlimited credit at the store across the street, that he nor his friends will ever buy another dollar's worth at your store from you, etc.

At the next place he will be pulled up the same way and Mr. P. will soon realize that he can no longer work the old game and he will become somebody's cash customer. Always make it a point to tell him whom he owes and how much. The poorest pay dislikes to have anybody know who he owes and he will make an effort to get rid of these hardware bills.

Meet Regularly.

This book should be kept up, striking off such names as have paid and adding new ones. These new ones you will find are usually new comers in town and these could be avoided with many local associations in existence. Meetings should be held once a month at a regular time to keep the members interested and in line.

With this start the benefits of local organization will grow in other directions. Arrangements will soon be made for early closing hours, saving fuel and light and an hour each day to spend with your family, without seriously inconveniencing anybody. In my town we close at 6.30 every day in the year except Saturday, and have done it for nine years.

Another point of advantage is to have each member carry a distinct line of such goods as stoves, refrigerators, lawn mowers, garden hose, hay carriers, cutlery, granite ware, etc., thus removing competition on these lines and insuring larger profits and enabling you to handle a better grade of goods.

Co-operative Buying.

You will find it convenient to buy such goods as linseed oil, white lead, wheelbarrows, rope, binder twine, building paper, fencing, etc., together in car lots, thus getting carload prices and freight rates, though each may use but a small quantity, enabling you to make a larger profit on these goods which are usually sold on a close margin.

The members would and should help out one another when short of an article at an agreed advance above cost, enabling him to supply a customer at a profit with a somewhat smaller stock and often a saving in telephone and express charges, and in case a member has an overstock of anything, the others should buy from him rather than send to the jobber, thus again reducing stock.

The annoying problem of contractors' bonds could be solved by all members signing an agreement not to sign bonds of any kind and particularly contractors' bonds and informing the contractor of such agreement, thus getting rid of a very disagreeable responsibility.

Mail Order Competition.

A good live association could manage to get the names of the people that are getting goods from catalogue houses, look them over at the meeting and if you find any of them owing any member of the association, have such member write this party to pay up and make it clear to him that he cannot send his money away while he is owing the local merchant. If people knew that they jeopardized their credit at home by buying outside and that the home merchant

CONVENTION ORDER OF BUSINESS.

1—9 a.m. Enrolling of delegates and Executive Committee meeting.

2—10 a.m. Convention called to order.

3—Address of welcome by Mayor of Toronto.

4—President's address.

5—Secretary's and Organizer's reports.

6—Report of Executive Committee.

7—Appointment of Committees on By-Laws and Constitution, Finance, Resolutions, Legislation, Trade Grievances and Mutual Insurance.

8—Adjournment for lunch.

9—Reassemble at 2 p.m. Go into executive session to discuss trade grievances and hear addresses on subjects of interest to hardware and stove dealers by representative hardware and stove merchants from various parts of the province.

10—Adjourn at 4 or 5 p.m. to allow members of committees to prepare their reports.

11—6.30 p.m. Banquet at King Edward Hotel, tendered by HARDWARE AND METAL.

12—Wednesday, 10 a.m. Receive reports of committees.

13—Discuss the recommendation of the By-Law and Constitution Committee regarding affiliation with the Retail Merchants' Association.

14—Election of permanent officers and discussion re date of next convention.

15—Adjournment for lunch. Reassemble 2 p.m.

16—Clean up business of convention and conduct a "Question Box" discussion on trade matters.

17—4 p.m. Automobile ride round the city.

P.S.—The above draft may be changd slightly by the Executive Committee or the Convention. It outlines an interesting programme of pleasure and profit for every hardware and stove dealer who attends.

knows who is sending his money away, there will be less outside buying, thus reducing this competition. This, however, can only be done where there is a strong local organization. I believe this is a point worth discussing.

A saving can be made by cutting out unprofitable advertising, such as programmes, score cards, hotel registers, city write-ups, etc., which we are continually spending money on simply because our competitor does it, knowing that it will bring no returns and is a dead expense.

Friendly Competition.

I have enumerated several important advantages of local associations, without any combination of prices, with no disadvantages to the consumer and certainly no reasonable disadvantages to any hardware merchant belonging to same. Some may say that such associations will foster competition and put the small store on the same footing as the large one. My answer is we cannot keep out competition under any plan and it is certainly preferable to have a friend as a competitor than an enemy, and as to the second objection, the large store is usually owned by the larger and better business man, who will hold his own in competition even if his wings were clipped a little, which, however, is not necessary to enjoy many benefits of local organization.

It is not imperative that every hardware dealer in the city should belong to an association to make it a success. The majority working together against the minority individually will control matters in any community and in time the others will gladly join them.

CANADIAN HARDWARE STORES.

No. 1.

Few towns the size of Cowansville, Que., can boast of such up-to-date hardware stores, either in construction or equipment, as that of McClatchie Bros., which is here illustrated.

The building is 32 feet wide by 100 feet long and has 12,800 square feet of floor space. The basement is the full size of the building and is 8 feet between floor and ceiling, the floor being made of concrete and used for storing all kinds of heavy goods. The first or ground floor is divided in the centre. The front 50 feet are used as a hardware store, the rear 50 feet for a tin and plumbing shop. This flat is 12 feet between floor and ceiling. The front of store is all plate glass, as will be seen by the accompanying cut.

This store is equipped with all the modern and up-to-date fixtures used in the hardware business. To the right of entrance stands a large 10-foot silent salesman or show case. The shelving through this side is fitted with glass show cases and hardware drawers, the wood fronts of which are finished in oak and present a very nice appearance. The other side and rear end of store is fitted with attractive shelving which is used in displaying tinware, copperware, nickel plated ware, granite and woodenware, while the rear end shelving is devoted to paints, sundries, such as enamels of all kinds, varnishes, stains, etc. The shop is equipped with the latest improved cornice brake and machinery for manufacturing sugar evaporators, steel arches and all other sugaring utensils, as well as for general tin work, plumbing, roofing and steamfitting.

Just in the centre of this flat and between the store and shop is situated a fine large and well lighted office with windows looking into both store and shop. The shop has fitted in one end just as one enters from the store, an elevator which is used for conveying all heavy goods from basement to shop and store room on flat above. The second floor is also divided in the centre. The front 50 feet is finished into a beautiful dwelling consisting of seven large, well lighted rooms with bath room and halls. This dwelling is fitted with all modern improvements. The rear 50 feet is used as a store room for storing surplus stock and such goods as are manufactured in the tin shop. The ceilings on this flat are ten feet high. The third floor is fitted up for the Masonic Order and consists of a lodge room 32 feet in width by 50 feet deep, with an anteroom 10 by 28 feet, a reading room 14 by 28 feet, a kitchen 14 by 12 feet, and a dining room 18 by 40 feet. The ceiling of this flat is 12 feet high.

The roof is of the hopper style and is covered with galvanized roofing. Throughout the entire building metallic ceilings of beautiful design are used. There are twenty-two ceilings and each one laid with a different pattern, using in all about 10,000 feet of ceiling, which was manufactured by the Pedlar Roofing Co. The exterior of the building is covered with galvanized rock-faced stone siding, the cornice being also made of galvanized iron. It required over 100 squares of metal for the exterior, which was also designed and made to order by the Pedlar Roofing Co., of Oshawa, Ont. The building is heated throughout with a low-pressure steam heating apparatus consisting of two No. 160 Gurney Bright Idea sectional water tube steam boilers with twin connections and Gurney's wall and standard radiators. So perfectly has this system worked that the seeond boiler has never had to be fired during the past Winter.

CANADIAN HARDWARE STORES No. 1—McLatchie Bros., Cowansville, Que.

PRACTICAL PHILOSOPHY.

The sun shines for all who get up early.

A bold front is a good thing only when anchored to a stiff backbone.

When some men think they are thinking they are just really killing time.

It's the hook behind the bait that lands the fish—the truth behind the advertisement that makes the sale.

Opportunity is a visitor who should be made welcome without regard to circumstances.

Persistent daily effort, with a definite purpose in mind will accomplish almost anything.

The man who falls back on his old record has reached his full growth and commenced to shrivel.

True loyalty in business means "to stand up for your own opinion before your employer, and for your employer's opinion before the world."

BUSINESS MANAGEMENT

Article II—By Howard R. Wellington.

AFTER making the opening journal entries showing the net investment in the business and of what such investment consists, it is necessary to open ledger accounts for the various titles represented in the opening entry.

Below will be found the accounts necessary in the business of Mr. J. M. Russell, and simple rules for the guidance of the merchant in debiting or crediting these accounts, as transactions arise in the ordinary course of business :

This set of accounts will be used later on in the series showing transactions for a period posted up and the books closed, showing trading account, profit and loss account, and balance sheet.

The following rules may be used as a guide in charging or crediting the various accounts, numbered 1, 2, 3, etc.:

Account No. 1.—It is not necessary to make any further entries in this account until the close of the year, when the net profit is transferred from profit and loss account.

The balance in the account at present shows the present worth of Mr. J. M. Russell.

Account No. 2.—The cash account is usually carried in a separate book, although the principles involved are exactly the same. Debit cash for all cash on hand or in bank at commencement. Debit cash for all currency, money orders, cheques, drafts received. Credit cash for all cash paid out or cheques issued. (Specimen cash books will be taken up later).

Account No. 3.—Debit merchandise account at commencement of business for amount of merchandise on hand, as shown on stock sheets.

Debit this account for all merchandise purchased and also for goods returned by our customers.

Credit this account for all goods sold and also for all goods returned to other parties on account of defect or damage.

(The best methods of recording sales will be described later).

Account No. 4.—Debit equipment account at commencement for value of rigs, horses, harness, office and store fittings.

Charge this account from time to time as additions are made which increase the value of the equipment.

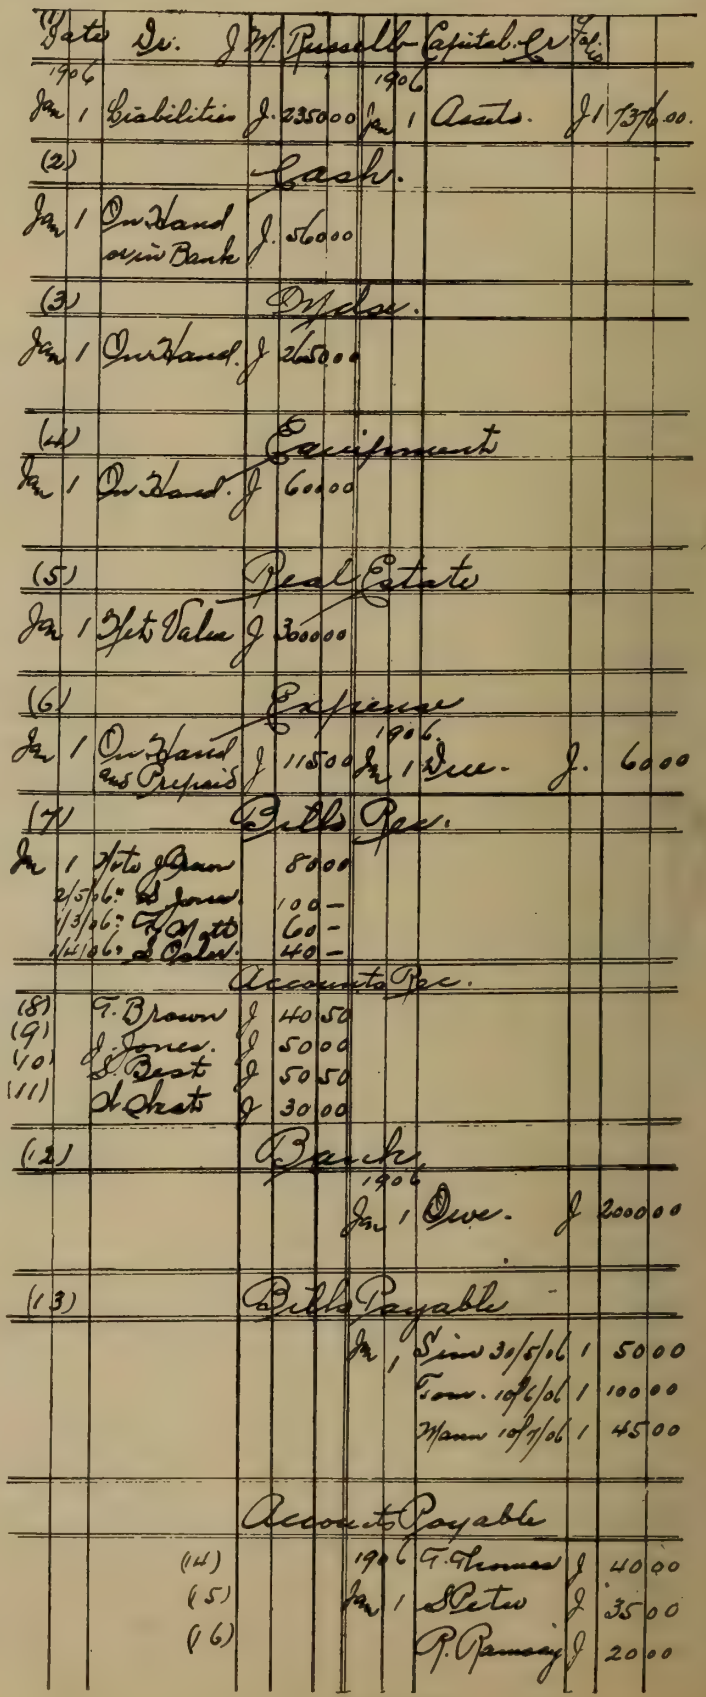
Account No. 5.—(Same as No. 4).

Account No. 6.—Charge this account with such items as salaries, light, taxes, rent, insurance, postage, stationery and sundry current expenses.

Account No. 7.—Debit at commencement for all notes and acceptances on hand.

Charge this account as drafts are made or notes received, crediting the customer. When the notes are paid, credit "bills receivable" account in the cash book.

This account may be kept in the general ledger or in a separate book, as desired. (A design for each will be given later).



Accounts Nos. 8, 9, 10, 11.—These are ordinary accounts with customers, showing balances owing, to which is added purchases from time to time.

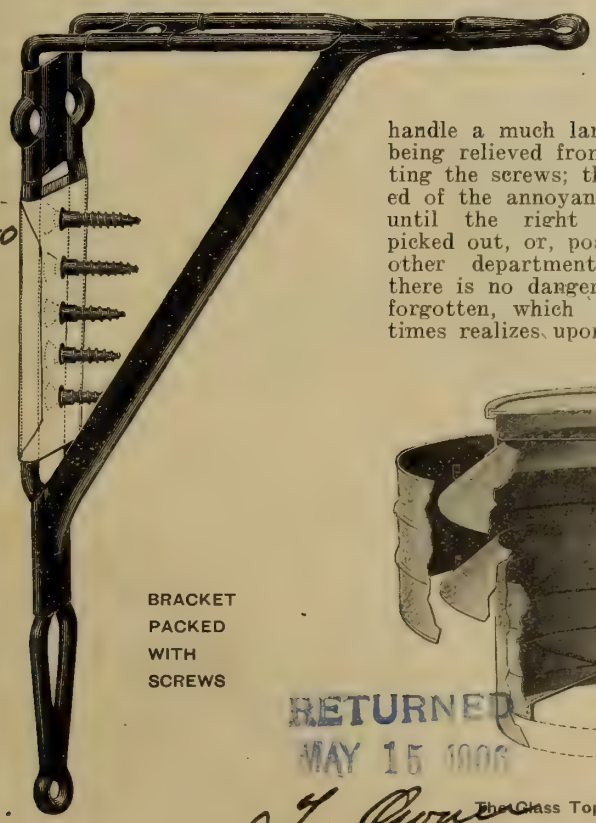
Account No. 12.—The "bank," or "bank discount" account is credited with the amount borrowed, showing as a liability to the business.

Account No. 13.—Credit bills payable account with acceptances of drafts or notes issued by us, charging the party to whom note is given.

When note becomes due and is paid, bills payable account is debited and cash is credited.

Accounts Nos. 14, 15, 16.—These are ordinary creditor's accounts showing balances due to others, to which is added amount of subsequent purchases.

(To be continued.)



NOVELTIES FOR THE HARDWAREMEN

Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

THE BURT VENTILATOR.

The Burt Mfg. Co., Akron, Ohio, makers of oil filters and exhaust heads, has recently begun the manufacture of ventilators. The Burt ventilator is especially noteworthy for a patent damper, which consists of a sliding sleeve to regulate the outflow of air from the ventilator without cutting off light in the case of the glass top ventilators or shaking dust which is sometimes the accompaniment of the movement of a flat damper. Its general construction is shown in the accompanying illustration, which represents it with flat glass top, with heavy wired glass, so that it can be employed both as a skylight and as a ventilator. The damper is shown, together with the cord and pulley by which it is operated from below. The cord may be fastened at the lower end, or a counterbalance may be used to keep the damper in position. Care is exercised in making the air shaft round, so that the sliding sleeve can be moved without friction, and the shaft is strengthened by heavy bands. When the damper is at its highest point it comes in contact with the top, in order to close completely the air outlet from the ventilator. Another of the special details of the ventilator is that below the glass top is a drain into which any water condensed from the air on the under side of the glass can run. The water passes through small holes, indicated in the illustration, to the outside of the ventilator. The ventilator is made with a metal top when desired, but otherwise the construction is that described. The regular patterns are built of galvanized iron and the glass top or skylight feature is made flat in sizes as large as 40 inches in diameter; but in larger sizes is given a sectional glass top of pyramidal form. The Canadian Fairbanks Co., Montreal and Toronto, sell these goods in Canada.

BRADLEY STEEL SHELF BRACKETS.

The Atlas Mfg. Co., New Haven, Conn., sole manufacturers of Bradley steel shelf brackets, wire closet hooks and tinned spoons, are introducing a new feature in their brackets this year. By means of the ingenious device illustrated in the accompanying illustration, the screws for each bracket are attached to the bracket itself.

This packing with screws has a number of advantages. First, the clerk can handle a much larger business through being relieved from looking up and fitting the screws; the customer is relieved of the annoyance of having to wait until the right size and number are picked out, or, possibly, going into another department to buy the screws; there is no danger of the screws being forgotten, which the customer oftentimes realizes upon reaching home, and the brackets are sure to be put on the brackets.

The Glass Top Burt Ventilator.

Art Book 5-0
page 41

The points of merit already claimed for the bracket itself still hold good, and the company are now packing special assortments of the brackets, which gives the trade the opportunity of carrying a light stock of the goods and still enjoying the full case price. The brackets packed without screws are No. 10, and those packed with screws No. 100.

SELF-RELEASING FLOAT.

A well-known English angler gives the following directions for making a self-releasing float for fish lines:

Take a float whose stem extends a half-inch, more or less, above the cork body, all that is necessary is to cut a quarter-inch section off a rubber tube

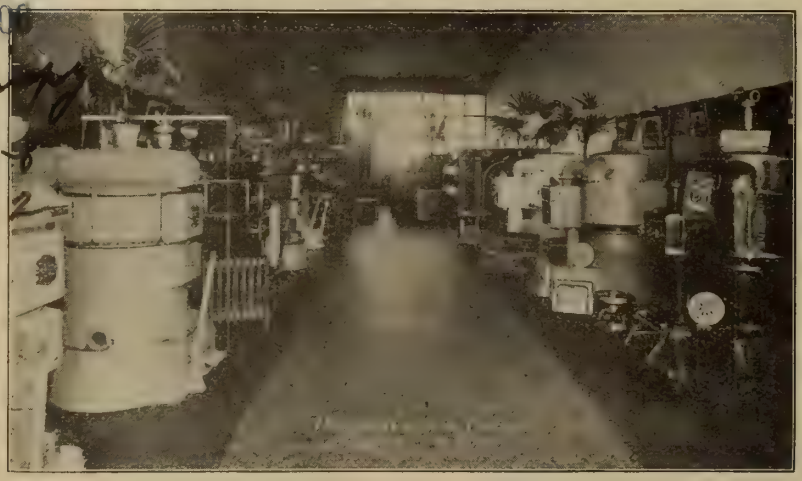
Self Releasing Float.

of a size that will fit the stem snugly, then after the line is run through the ring at bottom of stem, simply tuck a loop of it under the tube section. Striking a fish will release the float, or playing the former surely will, whereupon the float slides down the line to the snell or the sinker, and its purpose is accomplished. The facility with which the float may be released can be regulated by using a longer section of tubing and by pushing the folded line further through the latter. By cutting a groove around the top of the stem and taking a turn around this with the line after the latter is pushed through the tube, a non-resisting device may be had at will, although this would not withstand the strain of landing a large fish without tearing the rubber tubing. Still another method may be employed: Pull the looped line entirely through the rubber tubing and pass over the top of stem, then draw one end until the line passes around the stem but is merely held by the rubber. Tension will release the float.

WHY THE CHANCE WAS LOST.

A young lady working in a stocking factory, fearing that her chances for matrimony were small, wrote the following and slipped it into the toe of a gentleman's sock: "A young lady, good looking and of some means, would like to correspond with the wearer of this sock, if he is single, with a view to matrimony." A young man bought the sock and said, "There's my chance." He wrote to the young lady, offering himself as a suitable party, and to his surprise got this reply: "I have been married eight years, and have a family of five children." The man from whom he bought the socks had never advertised, consequently they had lain on the shelves for eight years.

The friend who does not help us higher is not worth having.



WINDOW AND INTERIOR DISPLAYS

THE STORE WINDOW.

The art of window dressing should be carefully studied. It is of importance enough to warrant the expenditure of some time in arranging the windows and in making them up in striking or original forms. If the proprietor cannot do it himself perhaps he has a bright clerk who would be glad to begin practice. If he has the clerk should be put to work and supplied with a reasonable amount of decorative material. Then if he succeeds, keep him at it.

Never allow a window to stay in more than a week at the most and have the displays arranged toward the last of the week so as to catch the Saturday trade. In country districts this is particularly important, though in the city, where telephone connection is becoming universal, as it is in some cities, the character of a window doesn't perhaps carry so great weight with the prospective purchasers. This is no argument in favor of neglect because an attractively dressed window is sure to bring new customers, even if it doesn't increase the business of the old.

Handsome Show Rooms.

MOVING OBJECTS IN WINDOWS.

Moving objects in windows invariably attract much attention.

In many cities in the United States moving objects in window displays have been all the go of late and the merchants who used them are extremely enthusiastic over the results obtained.

Watch the pedestrians on a prominent thoroughfare as they go along glancing or looking into the show windows. When they come to a window in which there is something in motion they all stop. Many will linger a long time.

A short time since a crowd was noticed standing in front of a Boston store. A basement window about 8 feet wide had been transformed into a mammoth bird cage, the interior arranged in a rustic manner. Small swings and sticks so arranged that they would move back and forth when birds alighted on them were arranged, and the birds, little prettily-feathered things, were flying about in lively style. There was plenty for them to feed on in the "cage," and there must have been as many as a dozen birds. It drew a crowd, and would anywhere.

Acrobats who do stunts in windows attract much attention. They are mechanical toys considerably smaller than Tom Thumb of old. In a drug store window not long ago the miniature image of a man, wearing a full dress suit, large "diamond," and silk hat, went through a continuous performance of turning around and then striking the plate glass window with a little cane he held in his hands. This striking the window made much noise. The thing was operated by a clock-work arrangement.

CHURCH ORGAN WINDOW.

An unusually clever and ingenious display attracted much attention in a store in the Western States recently. It was a reproduction in hardware articles of a pipe organ, the main pipes of the organ being fashioned from stove pipe, highly polished and coming together in graceful reverse curves, showing the handiwork of the expert tinner. The front or body of the organ was formed of the high closet of a kitchen range, the keyboard being made up of white and brown oil stones. The sounding pipes were composed of galvanized corrugated conductors, side wall brass registers being artistically set upon either side of the organ body. The music rack consisted of a wire bread toaster.

Brass knobs and spice boxes furnished the stops. The mouthpieces on the pipes were tin scoops, and the cones were reducers used on conductor pipes. The pedals stretching under the organist's feet were formed of white axe helves and black handled hatchets deftly arranged. The organist's perch was a bathtub seat, suspended at either end from large andirons. The approach was of tiling. Carpenters' tools, rifles, etc., constituted the side wall decorations. Across the top red and green incandescent lights threw a mellow glow over the unique effect.

The articles in the window not directly incorporated in the display were changed every morning, price tickets being used in connection with them, so that the window proved to be a winning ad for the store.

HANDSOME SHOW ROOMS.

The accompanying illustration shows the interior of the Winnipeg show room of the Pease-Waldon Co. Since the removal of this firm from Lombard street to Portage avenue they have opened out very handsome show rooms in which the full line of Pease Economy furnaces and Florence boilers is displayed. The show rooms are well lighted and as they are decorated with palms they present a very pleasing appearance.

PLACARDS IN WINDOWS.

Placards should be used in the windows occasionally. They need not be finished show cards so long as they are plain and to the point. A very effective way has always been found to write the announcement on a piece of wrapping paper with a coarse crayon and paste it on the inside of the glass. People will almost invariably stop to read such notices. Placards should not be large enough or numerous enough to detract from the trim.

There are many hardware novelties that the public generally know nothing about. Get up a nice display of such in kitchen utensils, and other household goods. Hundreds of these things could be sold if shown.

Nothing is so attractive as woodworking tools at this time of the year, when everyone has some repairs to make.

Little Sermons on Advertising

Delivered by John C. Kirkwood.

The Handicap of Being Unknown.

I REMEMBER that when I was a retailer, a traveler called on me to sell a line of laundry soap. He said he had sampled the town; that there would be a big demand in consequence; and he wanted me to order five cases. Prior to his coming I had never heard of his firm or his soap, and I was not ready to take up his soap on short notice. Moreover, I had had experience in just such cases as the one in question—sometimes costly experience—and I was deaf to all arguments. The soap salesman became angry. He said that he had sampled the town; that he was not leaving all the work of introduction to the grocery trade. He said that his house was co-operating with the trade in the most practical manner. I didn't buy.

I do not say that the firms one never heard of are on that account unreliable, unworthy of confidence. But I do say that the firm that solicits the retailer's favor and co-operation, owes it to the retailer to establish and maintain an acquaintance. And I say furthermore, that this acquaintance is best developed through the medium of the retailer, trade newspapers; granted, of course, that this newspaper is reputable, widely circulated and a recognized authority in the trade or interests it claims to serve. A trade newspaper of this description comes to be looked upon by the retailer as his work of reference. What he fails to find there is lacking in importance, and so is unworthy of his serious attention. This applies not only to editorial departments and kindred matter, but also to the advertising section. A retailer is warranted in looking for the advertisements of the firms he deals with, in the advertising section of his trusted trade newspaper. A right appreciation of this point would lead some non-advertisers to become advertisers with resulting gain.

A wholesale or manufacturing firm may be 100 years old, and yet be unknown to the trade that distributes its goods. I have in mind a firm of clothing makers, an old and honorable firm, having a very large factory, and known to the jobbing trade as providing certain grades of goods unexcelled anywhere for quality and value. This firm has been forced through competition to brand its product and to go direct to the retail trade. It recognizes the handicap it is under in being practically unknown to the retail trade.

Even though it can say to the retailer, "you have handled thousands of dollars worth of our goods without knowing it," this firm is facing the problems of the future with no confidence, no reliance in its long years of successful manufacturing. It has to begin afresh as it were, and one of the first things it is doing, is to begin advertising in the trade newspapers circulating among the retailers selling its class of goods.

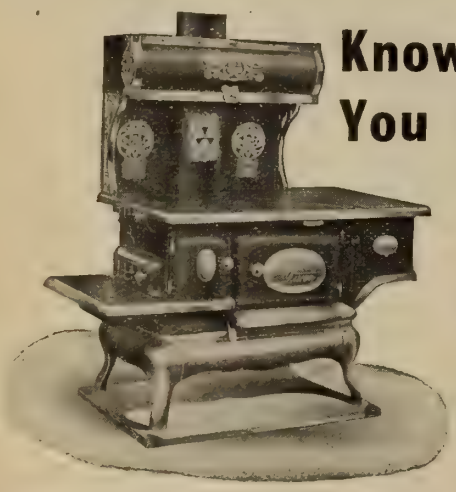
It takes a situation of this sort to bring home neglected or forgotten truth. This firm of clothing makers is vainly wishing now that it had begun years ago to establish an acquaintance with the final distributor of its merchandise. It was urged to advertise time and again, but its steadfast reply was, "No. We sell only to the jobbing trade. We know all the firms we care to see to. What's the use of our advertising?"

This situation brings into clear relief the fact that to be known and favorably known is a business asset of untold value. The cost of getting and keeping known, is in realty a very small annual charge, too small to be seriously considered by any firm with a heart bigger than a mouse.

These sermons are supposed to be short, and so it is necessary now to close.

The application is: Non-advertisers will find it prudent and profitable to develop an acquaintance with the trade through advertisements in the right trade newspaper; and advertisers should maintain their advertising without a lapse.

THE VALUE



of a range can only be fixed by its construction. If the body is made of the best steel obtainable, plentifully and well riveted by hand—the rivets being driven to an air-tight joint. The oven having angle frames, front and back, to which the oven and body are riveted. The fire box, correctly proportioned, well lined and properly grated. The tops, doors, door frames, dampers, damper rods, and all parts liable to break from usage, abuse or fire, made of malleable iron, always in good condition, no expense for repairs. Value is obvious—cost should be the last consideration. Apply this test to

Know What You Buy

A good many dealers order their stoves in prejudice. In other words, they **buy** because they have **bought before.**

Now you are not going to make yourself a slave to "one-idea" convictions.

Because a certain range **sells** well in your store it **doesn't** say **another** range will not sell better.

If we can offer you that **better-selling** range, you as a profit-seeker should necessarily consider the proposition.

Notify us to send you a copy of "Empire Queen" Booklet. It tells about **"THE EMPIRE QUEEN RANGE."**

THE CANADA STOVE AND FURNITURE CO., 126 West Craig St., Montreal, Que., Agents for the Province of Quebec.

When she says "Show me an Imperial Oxford" —got your answer ready?

She—and that means every woman in Canada who sees advertising—is going to say that to live dealers this season as she never said it before———

She is going to say it so loud that the stove trade will hear mighty little of any other range's name———

We know that much for sure. We have taken care to make sure of it———

We mean to sell every really high-grade range that Canada buys this year. Advertising will do it,—you will help do it, if you want to get the good and the profit that advertising will bring you.

But you can't get that good unless you are ready with the answer when she asks to see the Imperial Oxford Range—the range with the oven flue that alone does perfect baking—the range with more selling-points than you'll need to use.

When the demand comes, you want to be able to say———

—right this way, please!

WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and Complete Hotel Kitchen Outfits, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

In the Stoves You Sell Does Coal Enter by way of the "Drawing Room"—Lids; or through the "Servants' Entrance"—Pouch Feed?

Coal rightfully is the servant of stoves and ranges, not the master. The lids are for centralizing heat on utensils, not for feeding the fire. Dealers, let us get right on these points, for when you size up the ordinary stove or range, you must admit Coal is the master and the lids are Grand Masters—have to be consulted on almost every move.

For instance, the mistress of the kitchen says to herself, "I'll give the range a shake!" Then she takes hold of the shaker, and there you are! Lifts off the lid to see how the fire stands before she commences operations. If the same mistress is cooking a number of dishes and consequently has a number of pots "going," there will be a "general shift"—hands as motive power—when the fire puts in an application for more fuel. Why shouldn't there be a great fuss when Old King Coal enters?

Luckily for the mistress whose dealer is interested in her welfare, there is one make of stoves and ranges, where Coal is the Servant, and the Lids don't run the whole show.

Royal Stoves and Ranges

are made with the Pouch Feed which performs the function wrongfully allotted to the lids. When the mistress wants to shake her "Royal" she can "peek" down the "feed way," keeping her face from the heat, but her eye on the fire. When she thinks it is time to put more coal on she simply opens the Pouch Feed and shovels the coal in, all the time the even tenor of the "pot's" way being undisturbed.

So you see, Dealers, that when stoves and ranges are made in "Royal" style the owner of the stove or range is King—can get best service without paying such forfeits as Profuse Lid-Lifting, Continuous Eye Duty, Burned Fingers, Heated Faces.

Considering that Royal prices are the "fairest of the fair" it is not necessary to tell you what to do.

TIN IS REALLY SCARCE.

When the ascent of tin began some few weeks ago it was generally believed that speculators on the London Exchange had manipulated a corner, thus forcing prices up only temporarily. But since it has been seen that almost daily advances are being recorded on the tin market, dealers are beginning to realize that the London corner is not the only condition to be reckoned with.

A genuine scarcity of tin exists. The producers are certainly alive to the situation, and reports from Batavia, just received, state that the number of coolies working at the famous Banka mines has considerably increased since the beginning of the year. There are now 11,600 men working, as against 9,000 men in 1904.

It is said that these mines are now producing tin at the rate of about 1,300 tons per month, and if this can be kept up the present year's output will equal that of 1903-4. The home Government has withdrawn the restriction recently placed on the quantity mined, and is using every means to bring the production again to its high level.

BUSINESS MANAGEMENT.

We would call attention to the excellent series of articles which is appearing in these columns under the department of business management. Mr. Howard R. Wellington, who is contributing them, is an accountant of the first rank, and his development of the subject is worthy of close study, not only by merchants but by their clerks. The articles are all based on the experience gained by actual work in this line, and the results may be relied upon as correct.

An orderly and economical system of bookkeeping is a prime requisite in every business, no matter how big or how small it may be. Without it a merchant is at sea as far as the details of his business are concerned. He cannot tell which of his departments are carrying a profit and which are being run at a loss. Yet if a man is to succeed he must know accurately how every part of his business is working out in order that he may drop altogether or re-organize the one and extend and amplify the other. The department of business management will furnish all that is necessary to systematize the financial end of a store. In these articles a complete system of retail bookkeeping is being explained. These should be read carefully and preserved. They will prove valuable to refer to when questions of difficulty arise.

CHARACTER BUILDING AT CONVENTIONS.

What a radical change the exigencies of business have brought about in the methods and general actions of merchants, travelers and salesmen! The man with a thirst, with a predilection for the gaming table, with an eye open to practically everything but business has been eliminated and in his place earnest, careful men have blazed the way for America's rapid strides to the front in commercial and manufacturing industry. These thoughts were suggested by a day's attendance at the convention of the Minnesota retail hardware dealers at Minneapolis, says the Hardware Trade. Time was when such gatherings were mere junkets, and when men seemed to throw off restraint and to mistake liberty for license. Even in later years, while the germ of manhood was fast developing the evolution from old times, conventions were to a large extent business formalities, and but little attention was paid to the ethical or moral points of view.

No man could have attended the recent Minnesota convention without having a desire for better living, for better things and for closer relations with their fellow man. Higher ideals and more manly ambitions were certain, sure results of the three days' session. The men in attendance on the convention were in a serious frame of mind, and they talked, worked and thought in the interest of business, while they advocated the friendliest relationship between buyer and seller, a relationship that is best advocated, best sustained and advanced through the establishment of the closest friendships aided by confidence.

Confidence needs no advocate. Men do not establish confidence in a day. Confidence is established by days and weeks, months and years of fair, honorable business relations. When a man can walk into a bank and have his note discounted without collateral security there exists a high degree of confidence; when a customer can walk into a store and know that what he or she buys will be exactly as represented then confidence exists and it will only cease when the man behind the counter forgets himself so far as to misrepresent.

Your customers, it matters not in what line you may be in, are not birds of passage. They will pass your way again and again. If on one of these trips you slip and fall short on the measure of honesty, they will pass your way no more, if they can help themselves. It is vastly easier to gain confidence and retain it than it is to win back lost confidence, to recover lost trade. Be square with your trade, be square with your jobber, be square with your family and you will be square with yourself.

Confidence is a great corner stone for the builder. Have confidence in yourself and in your fellowman. If your conscience approves of your daily walks, it is safe to assume that you are on the broad highway and keeping to the right.

A WINNIPEG PUBLICITY BUREAU.

There is sound sense in the proposal of F. W. Henbach that the city of Winnipeg should raise, in part from the civic funds and in part by subscriptions, a sum of $25,000 to be expended by a publicity bureau in making known the advantages of the city as a manufacturing centre.

The project for supplying the city with cheap motive power from the waterfalls at Lac du Bonnet is now well under way and the transmission lines of the private development company are already in St. Boniface, across the river from Winnipeg. The municipal enterprise will, in all probability, be under way in a few months; and there is every reason to believe that the chief impediment to Winnipeg's growth as a manufacturing city will then be almost immediately removed.

Nevertheless it has long been accepted as indisputable that Winnipeg is laboring under grave disadvantages in her efforts to promote manufacturing and some special effort is necessary to advertise properly the fact that the handicap has been removed.

A manufacturer or a merchant may have a reliable line of goods to sell, but unless he lets his customers know their merits the goods are apt to remain on his hands. In the same way, Winnipeg may offer many advantages to the manufacturer, but they must be made known. A publicity bureau in charge of a competent man could do great things for Winnipeg.

TRADE ASSOCIATION ADVANTAGES

Everywhere the attention of tradesmen in all lines of business is being directed to the organization of trade associations. Manufacturers, jobbers and retailers alike are coming together in association form for the advancement of their respective interests, and the tendency is becoming pronounced for the different associations representing the makers, sellers and consumers of goods to work, where possible, along harmonious lines, to the mutual benefit of all. In other words, the essentially selfish idea which animated the promoters of some of the first trade associations is being displaced by the broader conception of the association idea, which realizes that all the various trade interests have their rights, and that these rights need not of necessity conflict.

The recognition of this fact tends to eliminate much of the antagonism and friction which naturally accompany the more selfish view of organization, and the result is a happy one for all concerned. Notwithstanding the limitations which there must be to the carrying out of some of the association ideas, there are few business men who have informed themselves in regard to the workings and advantages of these organizations who are not ready to acknowledge the benefits secured by them for those for whose special advantage they are constituted, as well as to the trade as a whole which they represent.

One of the most important benefits which have accrued to the various trades through organization is the development of the social spirit which has been brought about at the various association conventions and other meetings by the contact between the individual members outside of the business sessions. It is in this way that many business men engaged in the same line of work have come into personal touch with each other, with the result that confidence has been established among former competitors, that in many cases has ripened into permanent friendship; whereas, under the old rule, these men would have pursued their business with anything but kindly feelings toward fellow tradesmen, who were regarded rather as enemies than as confreres. This establishment of social relations has facilitated the carrying out of many reforms and the correction of trade abuses which could not readily have been accomplished in any other way.

The broadening influence of connection with the trade association is another important feature. Matters which would not otherwise have come up for definite consideration are brought to the members' attention, and trade questions are considered in a broader spirit and from a different and more sensible point of view than could possibly have been the case where the individual member's interest only was considered.

The attendance of large numbers of tradesmen at association meetings is especially beneficial to the smaller and more isolated members of the trade, who are thus brought in touch with the leaders and the men of standing and ability in their own line of business. They are enabled to learn from them many things, a knowledge of which they could not possibly have secured had they not been thrown in contact with the leaders in the way of trade association. This contact operates to their advantage, giving them new ideas as to the conduct of their business and stimulating them to co-operation in more progressive and enlightened methods.

The interchange of opinions and experiences, the description of methods which have been found profitable, the discussion of difficulties which have been encountered, are all suggestive, instructive and stimulating to the tradesman who is ambitious to keep himself in the procession. Few business men who have been at any time, or in any way, connected with association work, but will acknowledge with substantial unanimity the advantages they themselves have secured through the contact with their associates which they are privileged to enjoy periodically at meetings of their associations.

Ontario hardware and stove dealers have been slow to organize an association, but, having at last taken action, are to be congratulated for the hearty manner with which they are taking hold of their new association. The convention to be held in Toronto next Tuesday and Wednesday promises to be particularly interesting both from an educational and a social standpoint, and the merchant who does not embrace the opportunity to rub shoulders with his competitors at the first real provincial convention of hardware and stove dealers will lose far more than he would gain by remaining behind the counter of his store during the convention days. Let all who can attend and give the new association a rousing convention.

MUTUAL FIRE INSURANCE.

A subject which might well occupy the attention of the Ontario hardwaremen when they convene next week is that of mutual fire insurance among hardware dealers, which has already been successfully adopted by the hardware dealers' mutual fire insurance companies in connection with the hardware associations in several of the Northern and Western States.

Every dealer must recognize that it is absolutely necessary for him to keep his stock and premises fully insured. This is not only to protect him against loss in case of fire, but also to preserve his mercantile credit. It is, of course, well known that jobbers and manufacturers regard an insurance policy as an asset but slightly undervaluing the goods on their shelves.

But in the old line companies, which carry practically all the insurance policies of Canadian merchants, the rates are high and are being constantly increased. In this way every holder of a policy is called upon to pay outside losses on various properties, many of which are more hazardous than his own.

It was because they recognized this injustice that the Wisconsin Retail Hardware Association decided upon launching a mutual fire insurance company, to which all members of a retail hardware association should be eligible. This insurance feature has wonderfully strengthened the association, and is now saving its members fully 33 1-3 per cent. on that part of their business. The idea has become so popular that, although their charter does not permit the company to solicit business outside their own State of Wisconsin, they have actually written policies, as a result of correspondence, in no less than twelve states and territories.

Speaking briefly, the plan followed by the Hardware Dealers' Mutual Fire Insurance Company of Wisconsin is to write policies for one year, charging thereon the established board rate for the respective towns, or if there is no such rate, the same as any reliable company would ask to carry the risk. Each year's business takes care of itself, and return premiums, based on the losses and expenses incurred during the current year, are given the dealer, in case he does not wish to renew, or are credited to him upon the renewal of his policy. In this way the dealer pays no more than he would have to pay elsewhere, while he is also sure of the return premium, making his insurance cost very much less than the board rates. The solvency of the company is guaranteed by a provision of the charter which forbids the writing of policies under $500 or larger than $3,000. So successful has the scheme shown itself to be from its inception, that its members are coming to look for dividends rather than assessments.

In advertising paints keep the name of the brand you carry well to the fore and see that no opportunities are missed to impress upon the reader "superior points."

HARDWARE TRADE GOSSIP

Quebec.

Carmichael Bros., machinists, Montreal, have assigned.

F. F. Fyles, of Abercorn, was a visitor in Montreal this week.

M. B. Squire & Co., plumbers, etc., Windsor, advertise their business for sale.

C. Leblanc, hardware merchant, of Joliette, visited Montreal during the week.

The Montreal Rolling Mills Company have been awarded a permit to erect a $60,000 storehouse.

J. A. Jackson, lately of Lewis Bros.' claim department, left on Friday night on a trip to England.

W. Gaulin, tinsmith and plumber, of St. Cesaire, was in Montreal on Wednesday to place orders.

Ulric Hervieux, tinsmith, of St. Cuthbert, paid a short business visit to Montreal a few days ago.

Ald. Thos. O'Connell, one of Montreal's best known plumbers, is spending the week at St. Andrew's, N.B.

Thos. Fortye, representing the Peterborough Lock Manufacturing Co., called on the Montreal trade this week.

A. G. McAvity, manager of the Canadian Buffalo Forge Company, Montreal, made a business trip to Buffalo last week.

W. Bonin, tinsmith, of St. Felix de Valois, was among the buyers from out of town to call on Montreal jobbers during the week.

Mr. Plumb, of the Eagle Lock Co., Terryville, Conn., made one of his periodical visits to the Montreal dealers during the week.

F. H. Scott, who represents several large English manufacturers in Canada, is at present in the Old Country in the interests of his business.

The Montreal Reduction & Smelting Co. of Canada has been incorporated with a capital stock of $2,000,000, and head office at Montreal.

Messrs. McKay and Booth, of the Corbin Cabinet Lock Co., New Britain, Conn., were in Montreal this week renewing business acquaintances.

The Wilson Automobile Co., at present occupying premises at 124 Craig street west, Montreal, are removing to large warerooms at 117 Craig street west.

Mr. Raymond, of Raymond & Frere, wholesale hardware dealers, St. Hyacinthe, was in Montreal making purchases from hardware jobbers on Thursday.

Sergeant-Major Nutter, of W. H. C. Mussen & Co., Montreal, had the honor of commanding the mounted escort on the occasion of Prince Arthur's visit to that city this week.

The sample room of Caverhill, Learmont & Co., Montreal, has been much improved in appearance by replacing the green cardboard sample cards, with squares of varnished wood.

Gordon C. Seybold, vice-president of the Seybold & Sons Co., Montreal, will leave for an extended European trip next Saturday, sailing on the new C. P. R. liner Empress of Britain.

Amiot, Lecours & Lariviere, Montreal, are greatly enlarging their office space. Among other changes, the private office of the president will be removed to the back of the present quarters.

J. H. Roper, Canadian representative of John Shaw & Sons, Wolverhampton, England, with headquarters at Montreal, is spending the month on an extended business trip to the Maritime Provinces.

On Thursday of this week the marriage of Edgar C. Budge to Miss Wilson, daughter of J. C. Wilson, was celebrated in Montreal. Mr. Budge is a member of the head office staff of the Sherwin-Williams Company.

On April 29 occurred the death, near Lake Megantic, of Edward Blaydes, who more than twenty years ago opened the first cutlery manufacturing establishment in Canada, the Canada Cutlery Company, now defunct.

F. Johnston, manager of J. C. McLaren Belting Co., left Saturday on a trip of several weeks to visit the firm's different agencies between Montreal and Winnipeg, and to establish a branch office in the latter place.

Alexander Gibb, 13 St. John street, Montreal, has been appointed agent in Canada for J. Jos. Fillee, Charleroy, Belgium, and is now in a position to quote advantageously for window and plate glass of every description.

The special jury has awarded damages of $7,000 to Dame L. Laurence, who sued the Montreal Light, Heat & Power Co. for $14,000 for the loss of her husband, J. J. Paquette, hardware merchant, who was killed by a shock last Fall while turning on his light.

P. M. Carter, hitherto general manager of the Carter White Lead Co. of Canada, will return next week to Omaha being called there by business interests in the Western States. He will be succeeded by J. B. Bell, who has represented the National Lead Company in Canada ever since the formation of that company.

In referring to the opening of new premises by the George Phillips Company, cutlers and silversmiths, last issue, the address should have read "the new Packard building, St. Antoine street," not as stated on McGill street. George Phillips has been for many years one of the chief clerks of the Windsor Hotel and latterly was appointed assistant manager. He has a host of friends amongst the traveling public, and as personality counts so much in business to-day, the company of which he is the head is favored with a strong asset in this connection. They manufacture the finest of silverware, cutlery and cut glass and a catalogue will be sent to those who write mentioning Hardware and Metal.

Ontario.

Leduc & Co., tinsmiths and roofers, Ottawa, have removed to Montreal.

G. A. Binns, of Newmarket, hardware merchant, was in Toronto during the week.

J. Radigan & Co., tinware manufacturers, of Hamilton, will build a $3,000 factory.

Wilson Bros., St. Marys, are opening up in the plumbing and tinsmithing business.

H. Moss & Son have purchased the tinsmithing business of A. E. Spooner, Renfrew.

McKillop & Ferguson have purchased the hardware business of B. Partridge, West Lorne.

J. Everett, of Thamesville, has bought out the hardware business of Brown & Graves there.

Webber & Webber, stoves and tinware merchants, of Dunnville, have dissolved, J. E. Webber continuing.

The plumbers of Fort William have returned to work, having settled their grievances by compromise.

W. J. Good, of the Canada Paint Co., has been appointed city traveler for the company in Toronto.

Fred. Lucas, lately with the Kemp Mfg. Co., has accepted a position with Purdy, Mansell & Co., Toronto.

Mr. Wideman, of A. & H. Wideman, hardware and implements, Markham, spent a day or two in Toronto.

Frank Sears, late of H. J. Conn & Co., St. Catharines, has opened up a plumbing business in that city.

Michael Costello, Orillia, has bought the foundry business carried on by Walker Bros., jewelers and machinists.

Elmer A. Lister, late of Rice Lewis Sons, has gone to Saskatoon to manage J. F. Cairns' hardware department.

W. A. Hillhouse, hardware dealer, Shelbourne, went a-fishing last week and caught a 22-inch trout. (Verified).

M. H. Roland, of the Kemp Mfg. Co., lost his catalogues and personal effects in the burning of the Orangeville station building.

A. A. McMichael, manager of the James Robertson Co., has gone to Atlantic City, with his family, for a couple of weeks.

P. McMichael, general manager of the Dominion Radiator Co., is in Winnipeg, in connection with the opening of their warehouse there.

Mr. Davey, of Ingram & Davey, hardwaremen, of St. Thomas, has undergone an operation at the hospital there. He is doing well.

R. O. McDonald, of Ottawa, and W. G. Whyte, of Arnprior, have formed a partnership to carry on a hardware business at Arnprior.

Clements & Co., hardware merchants, Milton, have bought out the stock of Messrs. Dewar Bros., hardware merchants, of the same town.

A. Schaefer, of Smith & Schaefer, hardwaremen, of Bolton, has received word from New Liskeard announcing his brother's death from scarlet fever.

E. P. Paulin, of Dashwood, has purchased the hardware business of J. B. Hawkins, of Goderich. Jonas Hartleib has purchased Mr. Paulin's store at Dashwood.

R. T. Wilson, buyer for the McClary Mfg. Co., London, was married last

week to a Toronto young lady, and has been spending his honeymoon at New York and Atlantic City.

Mr. R. A. Baines, of Baines & Peckover, wholesale metal merchants, Toronto, left for England on Wednesday. Mr. Baines will visit the Continent, and expects to return in August.

The Consumers' Cordage Co. have made arrangements with the Colonial Cordage Co. to handle their business in Toronto from the first of June, when the business of the two companies will be carried on from the one office.

A tank of gasoline exploded in Parson's Fair, St. Mary's, last week, and the store was damaged to the extent of $300. The explosion was caused by a boy going near the tank with a lantern. He escaped injury, but he won't do it again.

Chas. Richardson & Son, Harrow, have completed the rearranging of their hardware store. They have put in silent salesmen and trimmed the interior throughout with oak, and have, it is said, one of the nicest stores in Western Ontario.

W. Willis Mitchell, Canadian representative of James Cartland & Son, brass manufacturers, Birmingham, England, is again on the road, after a lengthy illness in the Toronto General Hospital. He left Toronto for the west on Monday.

The S. F. Bowser Co. have purchased a lot 100 feet by 125 feet on Fraser avenue, Toronto, on which they will erect their new factory for the manufacture of oil and gasoline tanks and similar commodities. The price paid for the lot was about $2,000.

J. P. McConnell, London, who has charge of the advertising for the McClary Mfg. Co., is arranging to make a trip to Winnipeg and the west. Mr. McConnell has, it is understood, arranged with a popular young lady to change her name and accompany him on the trip.

E. P. Morton has been granted a permit to build a hardware store on College street, near Ossington avenue, Toronto. Another hardware store is to be opened in the same district this Summer. A. McArthur is to open a hardware store on Queen street east, near Kenilworth avenue, shortly.

A. W. Humphries, Parkhill, president of the Retail Hardware and Stove Dealers' Association, of Ontario, reports that his sales were $1,200 more this March and April than a year ago. One day recently one clerk sold $162 worth of wire fencing and loaded it on wagons. That speaks well for trade in Western Ontario.

Mr. B. E. A. Hart, representing Hart, Son, Peard & Company, art metal workers, Birmingham, England, returned to England this week after a business trip through Canada. In Toronto he appointed the Brooks-Sanford Company as their special representatives, and this firm will stock a good line of their chandeliers and other lines.

More stealing by employes of jobbing houses in Toronto has been discovered, this time at Wm. Croft & Sons, sporting goods dealers, 126 Queen street east, resulting in the arrest on Saturday of Robert Welsh. Thos. Shea and Arthur Dick, all well-known young employes of the firm. They are charged with stealing, and Alfred Moore, a young man, of 42 St. David's street, is charged with receiving stolen property. It is over six months since a representative of the firm suspected the stealing by employes. The best razors, brushes, pipes and smokers' sundries were missed, but no definite action was taken till Saturday.

Western Canada.

J. A. Lockerbie & Co., plumbers, of Edmonton, have dissolved.

T. E. Wright, hardware and harness, Elva, Sask., is giving up business.

The warehouse of G. F. Stephens & Co., Winnipeg, had a narrow escape from fire last Sunday.

Mr. Bull, of the firm of Decatur, Bull & Co., Montreal, was in Winnipeg last week calling on the trade.

The Winnipeg Paint & Glass Company will build a substantial brick and stone warehouse in Calgary.

Seward McLean, of Brandon, has gone to Saskatoon to install the new plumbing and heating plant in the Empire Hotel at that town.

G. M. Watson, a traveler for Miller-Morse Hardware Co., has resigned his position to become sales manager for the Brandon Hardware Co. of Brandon.

Geo. D. Wood, of Geo. D. Wood & Co., will sail for England on June 2. While in England Mr. Wood will attend the Congress of Chambers of Commerce of the Empire as one of the Winnipeg Board of Trade representatives.

The Manitoba Frost Wire Fence Co. have purchased 161 feet of frontage on Nena street, Winnipeg, and in a few weeks' time work will be commenced on a factory 70x100 feet. H. L. Frost, president of the company, was in Winnipeg last week.

The Western Hardware Co., Regina, has decided to erect a new building, made necessary by the increasing business of this progressive firm. The new warehouse will be 40 by 80 feet over all and will consist of a full basement and three storeys. The building will be of frame construction, roofed and sided with metallic sheeting. The estimated cost is in the neighborhood of $6,000. All their business will be put under one roof and an effort will be made to develop their jobbing business.

Merrick Anderson & Co. have secured incorporation as the Merrick Anderson Co. Those connected with the firm are George A. Merrick, Thomas Anderson, Joseph A. Merrick, Geo. Smart and Louis A. Blackwood, all of Winnipeg. The head office will be in Winnipeg and the capital stock is placed at $500,000.

P. McMichael, general manager of the Dominion Radiator Co. of Toronto, was in Winnipeg last week arranging for the opening of a branch warehouse. In the course of an interview he announced the intention of his company to carry a $100,000 stock in Winnipeg.

Maritime Provinces.

The McLeod Hardware Co., of Sydney, C.B., has been organized to take over the business of Angus McLeod.

Ferguson & Cox, boilermakers and engineers, of Halifax, have dissolved partnership.

"CHARLEY" DIETRICH'S NARROW ESCAPE.

A thrilling story of the San Francisco earthquake is told by "Charley" Dietrich, who is in Montreal this week in the interests of Shurly & Dietrich, the Galt (Ont.) saw manufacturers.

Mr. Dietrich had been visiting in Tennessee, and, in company with some friends, was coming home via San Francisco. On the evening preceding the earthquake his party arrived at the St. Francis Hotel, and planned a sight-seeing trip for the following day.

Shortly after five o'clock in the morning Mr. Dietrich found himself standing on the floor of his room, in the twelfth storey, very dazed and excited. Everything was swaying, and he lost no time in getting down the twelve flights of stairs, the elevators being already out of commission. Mr. Dietrich and his friends quickly made their way out of the tottering building to the open square in front. When the second shock came they hastily left the spot and managed to get across to Oakland by ferry. Here they had the good fortune to secure accommodation on an outgoing train, and Mr. Dietrich returned to Galt on Thursday of last week.

Mr. Dietrich has an interesting souvenir in the key to his room at the St. Francis. He is having it suitable engraved, but needs no such memento to remind him of his terrible experience.

OLD FIRM SELLS OUT.

One of the best known retail hardware stores in the Province of Quebec changed hands last week, when Jos. Godin & Fils, Three Rivers, sold out to the firm of Cyrille Labelle & Co., who are also proprietors of a fine wholesale and retail hardware and grocery business at Sorel.

The firm of Jos. Godin & Fils has been in business at Three Rivers for nearly forty years. Recently, however, his health has began to fail Henri Godin, the sole proprietor, and he was advised by his physicians to retire from business.

C. Labelle & Co. will hereafter control this stand, as well as their old-established business in Sorel.

SHORT CARGO ON MONTEZUMA.

It looks as if there would be a disappointment in store for a good many Canadian merchants when the C. P. R. liner Montezuma comes to port. It is reported that she had contracted for a great deal more cargo than she could take, and, though full particulars have not yet come to hand, it is feared by some of the large importers of metals and hardware that some of their goods have been left behind.

MUNDERLOH'S NEW BUILDING.

Announcement was made this week that Munderloh & Co., manufacturers of electrical supplies, Montreal, have decided to erect a new building which will be of modern construction, and in every way well equipped for their growing business.

The new building will be erected on the extreme northern end of Victoria Square, immediately east of the Granby Rubber Co.'s warehouse. Work on the new structure is expected to begin very shortly.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Solder—Has advanced sharply. No. 1, 25-25½c; No. 2, 19½c.

Ingot Tin—Now selling at from 47 to 47½c.

Antimony—Up to 26½ and 27 cents.

Sheet Zinc—An advance of 25 cents per 100 lbs. all around.

Old Material—Copper wire, 15½c.; light copper, 14½c.; yellow brass, 10½c.; old rubbers. 7¼c.

TORONTO.

Ingot Tin.—The market has reached 50c. per pound.

Antimony—Still soaring, and now 26½ cents.

Solder—Quotations have jumped up to 25 and 27 cents.

Linseed Oil—An advance of one cent has been made.

Tinned Iron—Prices are likely to be advanced next week.

Tin Plates—Everything points to an advance.

Wire Nails—Are quoted openly in Toronto at $2.05.

Old Material — Several changes have been made.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 11, 1906.

Spring goods of all kinds are being shipped most briskly this week and it looks as if the period of rush deliveries will be longer continued this season than is usually the case. Repeat orders for green wire cloth, freezers, screen doors, hose, lawn mowers and garden tools, are coming to hand in large volume, thus showing that retail dealers are getting rid of their stock satisfactorily.

The strength of the metal markets, on the whole, is naturally reflected in all hardware lines, prices on which are very steady. The hardware jobbers have advanced prices on tinned sheet iron 25c. per hundred lbs., owing to the continued pressure of the ingot tin market, and also on solder for the same reason. All other lines remain very steady.

Inquiries for cement are now coming forward rapidly and the local dealers are looking for a large business during the coming months. The largest inquiry yet to hand is in connection with the new Windsor Hotel building, which will require a tremendous quantity of cement. Other large buildings which are being constructed this year in Montreal insure a busy season for dealers in all kinds of builders' supplies.

AXES—A good trade is being done at steady prices. We still quote: $7.60 to $9.50 per doz.; double bitt axes $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—Our prices are: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Conditions are unchanged and we are still quoting $4.25 for Cold Blast.

RIVETS AND BURRS—These goods are being shipped heavily by the jobbers here. Our prices are: Best iron, rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—As the hay crop in this province promises to be very heavy this year orders for this line are beginning to be received. It is expected that a large business will be transacted. We still quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS—The turn over is said to be very good and discounts remain as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—There is nothing new to remark in this branch of the trade. Quotations are unchanged, discounts being given as follows: ⅜ and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—Business is normal and discounts unchanged. We still quote: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Our price remains: $2.15 per keg f.o.b. Montreal.

CUT NAILS—Wholesale houses are experiencing the regular demand for these goods. The price given is $2.20 per keg f.o.b. Montreal.

HORSESHOES—Sales are large and prices quoted are as follows: P.B. new pattern, base price, $3.50 per 100 lbs.; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—The jobbers who have already issued their catalogue of sporting goods, state that orders are increasing very satisfactorily and they are looking for a large season's business. For the present ammunition is experiencing an active inquiry while small orders for guns are also in evidence.

BUILDING PAPER—General conditions are the same as at our last report. Prices are unchanged.

CEMENT AND FIREBRICK — Many inquiries for large lots of cement are now coming to hand and prospects for a big trade are of the brightest. We quote as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We give the following prices: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Repeat orders are coming in from all parts of the country and shipments are being made very freely. We give the following prices: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—This is another line in which repeat orders are being received. The price remains: $1.45 per hundred square feet.

BINDER TWINE—No change in conditions is reported.

RAW FUR—We quote as follows:

		No. 1.	No. 2.	No. 3.	No. 4
Bear	Black	$12 00	$8 00	$4 00	$1 00
"	Yearlings	7 00	5 00	2 00	0 30
Fisher		7 00	6 00	5 00	....
Fox	Red	3 00	2 25	1 00	0 20
"	Cross	5 00	4 00	2 00	0 50
Lynx		7 00	5 00	4 00	
Marten	Dark	10 00	5 00	2 0	0 50
"	Pale	6 00	3 00	1 25	0 50
Mink	Dark	6 00	4 00	1 50	0 50
"	Pale	3 25	2 50	1 50	....
Muskrat	Spring	0 25	0 18	0 15	0 03
Raccoon		1 50	1 00	0 50	0 20
Skunk		1 75	1 50	0 75	0 45

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 11, 1906.

The large volume of business that has carried on since the opening of the season is now pretty well in hand, and while everything keeps going with a good swing there is not that rush feature that characterized the opening weeks. A fair amount of sorting business is being done in general lines with those who do not make a practice of stocking up, but the weather lately has been against large turnovers throughout the country.

Wire nails have been lowered again this week without any apparent justifi-

cation. Some few weeks ago there was talk of an effort being made to stiffen up prices some, but it does not seem to have met with success.

Small orders of sporting goods have been coming in in good shape until the recent cold spell, when a falling off was noticed.

The advance noted on shovels in our last issue was not general on all lines, as, perhaps, some may have understood. The Canada Shovel & Tool Co., of Hamilton, are still quoting their former prices on Bull Dog, Moose, Bear, Fox and Black Cat brands.

AXES AND HANDLES — A steady business is being done, principally for future delivery.

CUTLERY AND SILVERWARE — Sorting orders are increasing this month, and quite a good future business is being done.

SPORTING GOODS—The cold snap has given a little setback to sporting goods, but small orders continue to come steadily.

WASHING MACHINES — Trade is fairly active at present.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING — The demand for poultry netting continues good. No further price changes.

GALVANIZED WIRE — We quote: $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—Some cutting has been going on for a while, but now nails are openly quoted at $2.05.

CUT NAILS—The usual trade continues to be done.

HORSENAILS — A steady business continues to be done. No price changes.

HORSE SHOES—The Spring has ushered in a good trade. Market firm. We still quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—Trade is reported to be active in all lines.

RIVETS AND BURS—The usual amount of business continues.

SCREWS—All lines are selling well at present. No price changes.

BOLTS AND NUTS—The usual volume of business continues to be done.

CORDAGE—We now quote as follows: On binder twine, 500 feet, 10c. lb.; 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13¼c. lb. Golden Crown, 500 feet, 9¾c. lb. On Gold Medal Brand (imported), 600 feet, 12¼c.; 650 feet, 13¼c. Discount for car lots: Manila, 15c.; British manila, 11½c.; sisal, 10½c.; double lathyarn, 10½c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16½ to 17c.; cotton waste, colored, 6¾c.; white, 9c.

CEMENT—Cement continues to be called for in large quantities. We are quoting as follows: For carload orders, f.o.b., Toronto, Canadian Portland, $2. For smaller orders ex warehouse, Canadian Portland, $2.15 upwards.

FIRE BRICK—There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES—Prices are firmer on country hides, dekins, sheep skins and horse hides. The supply is still very light. Wool is moving a little more freely.

Hides, inspected, steers, No. 1	0	11

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 11, 1906.

Ingot tin and antimony are still furnishing the sensations in Montreal metal markets. The former has now risen to the hitherto unheard of price of 47c. a pound, and it is freely predicted that 50c. tin will be seen before the bottom is knocked out of the present boom. From the firmness of the market it would seem that the speculative effort on the part of London dealers to boost the prices has been forwarded by exceptional big demand for the metal, which even under ordinary circumstances would have been sufficient to warrant an increase in current quotations.

Antimony has also reached a most abnormal price during the week just past and is now quoted at from 26½c. to 27c. a pound. There are not wanting metal merchants who predict that even this metal will go up as high as 45c. or 50c. before any decline is experienced by the market.

Copper is holding firm, but shows no disposition to demand higher prices. Both in this metal and in pig lead the market is not nearly so firm as might be expected, the explanation given being that dealers are so taken up by the peculiar situation in tin and antimony that lead and copper are escaping their attention.

One feature of the present situation which must not be overlooked is that tin plates are almost sure to be advanced in price. It is even stated that many of the Welsh mills have for some time past been turning out plates at less than cost price, and it is only a question of how long they will prefer losing money to losing business.

Sheet zinc is showing a little activity this week and prices locally have jumped 25c. a hundred pounds. All metals are strong in tone and it cannot be expected that there will be any declines in values for some time yet.

CANADA PLATES—Our prices remain as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

COPPER—Sales are very satisfactory and price is holding its own, while some dealers are expecting an early advance. For the present we quote: Ingot copper, 20½c. to 21c. Sheet copper, base sizes, 25c.

INGOT TIN—As noticed in our introductory remarks, there seems no let up in the daily advances of this metal. It is confidently expected now that 50c. tin, a condition which would have been laughed at some months ago, will very shortly be realized. Current prices are: From 47c. to 47½c. per lb.

PIG LEAD—It is hard to understand the quietness in the lead market. Many conditions exist which would favor an advance, but for the present our prices remain $4.25 to $4.35 per hundred lbs.

PIG IRON—Prices remain as follows:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18.50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	20 75	"	"
Clarence No. 1	18.00	"	"
" No. 3	17.65	"	"

BOILER TUBES—We quote: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL—We quote as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Our prices remain: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—There are large inquiries in the hands of the local merchants and prospects are that the season's business will be large. Our prices are as follows: Queen's Head, 28 gauge, $4.35; 26 gauge, $4.10; 22 to 24 gauge, $3.85; 16 to 20 gauge, $3.60; Apollo, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Comet, 28 gauge, $4.15

to $4.45 ; 26 gauge, $3.90 ; 22 and 24 gauge, $3.60 ; 16 to 20 gauge, $3.45 ; Bell brand, 28 gauge, $4.30 to $4.35 ; Fleur-de-Lis, 28 gauge, $4.20 ; 26 gauge, $3.95 ; 22 and 24 gauge, $3.70 ; 16 to 20 gauge, $3.65 ; 22 to 24 gauge, $3.70 ; 16 to 20 gauge, $3.45 ; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45 ; "Windmill Best," 28 gauge, $4.15 ; Sword and Torch, 28 gauge, $4.15 ; in less than case lots, 25c. extra.

BLACK SHEETS—We give following quotations : 28 gauge, $2.40 ; 26 gauge, $2.35 ; 22-24 gauge, $2.30 ; 19-20 gauge, $2.30 ; 8-10 gauge, $2.45.

ANTIMONY—One or two of the local firms have small quantities of antimony in stock on which they are quoting the remarkable price of 26½c. to 27c. per lb.

TIN PLATES—As a result of the continued advances of ingot tin it is thought that present prices on plates cannot long be maintained. There must be an early advance, but prices now current are : Cokes, base size I C 14x20, $4 ; charcoal, base size I C 14x20, $4.25.

TERNE PLATES — Prices remain steady and it is expected that a move upward will result when tin plates have advanced. We are now quoting $6.85.

INGOT ZINC—The market continues somewhat firmer in tone, with the price steady at 6¾c. to 7c.

SHEET ZINC—An advance has been declared on the local market and we are now quoting $7.75 in casks, $8 in less than casks.

SHEET LEAD—We quote as follows : 2½ lbs., 5½c. by the roll ; 3 lbs. and heavier, 5½c. by the roll ; small quantities 25c. per hundred lbs. extra.

BAR IRON—We are still quoting : $2.05 f.o.b. Montreal.

OLD MATERIAL—Rubber has weakened somewhat since our last report, owing to the slackness among rubber shoe men. Manufactured shoes have accumulated as a result of the poor Winter and there is consequently a rather small demand for old rubber. Copper and brass are somewhat firmer. There is a good demand and stocks are scarce. Local dealers are quoting higher prices on these goods. Our quotations are as follows : Copper wire, 15½c. ; light copper, 14½c. ; heavy red brass, 13½c. ; yellow brass, 10½c. ; light brass, 7½c. ; lead, 3¼c. ; zinc, 4c. ; machinery cast scrap, $13.50 ; wrought scrap, $12 ; stove plate scrap, $11 ; mixed rags, $1 to $1.20 per 100 lbs. ; old rubbers, 7¼c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 11, 1906.

Fifty cents for tin in ingots is likely to be asked any day on the local market, the jump during the week having totalled four cents, ingots now selling for 47 and 48 cents. The remarkable jumps on the outside markets and the great strength shown offer no hope of any change. While the present prices appear to be abnormal and speculative buying is as keen as when prices were steady. So long as there are buyers who are anxious to purchase, sellers can take advantage of the scarcity of stocks and send prices even higher. There is now talk of an advance of tin plate in response to the high price of ingots. Were it not for the depression in Wales tin plates would have been advanced some time ago.

Antimony has also moved upward again and is still soaring. There does not appear to be any reason why it should not double its present price, as no stocks are in sight to relieve the situation. Lead and copper are both active with prices strong. Tinned iron is understood to be booked for an advance at once.

PIG IRON—Conditions remain practically the same with the market strong and prices steady. We quote : Radnor, at furnace, $30 ; Hamilton and Midland, at furnaces, No. 1 $21, No. 2 $20.50 ; Londonderry, f.o.b. Toronto, No. 1 $22, No. 2 $21.50.

BAR IRON—Stocks are light and some lines short. The mills are rushed with work and prices continue at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Further advances have been made and while the market really stands at only 47 and 48 cents at time of writing some dealers are asking 50 cents, and this can be looked for as a general price almost any day. We are quoting 47 to 48 cents per pound.

TIN PLATES—An advance can now be looked for, as while the depression in Wales has kept prices down prices of ingots have risen so high that plates must respond. We are quoting : Cokes, base size, 14x20, $3.75 ; charcoal, base size, 14x20, $4.25.

GALVANIZED SHEETS—A good demand exists with prices firm and unchanged. We quote, 16 to 20 gauge, $3.45 up.

BRASS — The market is firm and prices steady. Buying is fairly active and quotations 23c. to 24c. per pound.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote : Plates, per 100 lbs., $2.35 ; heads, per 100 lbs., $2.60 ; tank plates, 3-16 inch, $2.45 ; tubes, per 100 feet, 1½ inch, $8.50 ; 2, $8.70 ; 2½, $10.50 ; 3, $12 ; 3½, $15.80 ; 4, $20. Terms, 2 per cent. off.

LEAD—The market continues strong and active. We quote : Canadian pig lead at $4.40 and English pig at $4.65 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—Business is increasing and prices steady. We quote : 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

COPPER—The market continues active and prices are held strong. We still quote : Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

ANTIMONY—This metal is still soaring and we now quote 26½c. per pound.

OLD MATERIAL—Receipts are large with a brisk demand for copper and brass. Advances have been made on red brass and scrap zinc. Dealers' buying prices continue as follows : Heavy copper and wire, 15½c. per lb. ; light copper, 13¾c. per lb. ; heavy red brass, 13¾c. to 14¼c. per lb. ; heavy yellow brass, 11c. per lb. ; light brass, 8½c. per lb. ; tea lead, $3 per 100 lbs. ; heavy lead, $3.25 per 100 lbs. ; scrap zinc, 4¼ to 4½c. per lb. ; iron, No. 1 wrought, $11 ; No. 2 wrought, $3 to $5 ; machinery cast scrap, $13.50 to $14 ; stove plate, $10 ; malleable and steel, $5 ; old rubbers, 7c. to 7¼c. per lb. ; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The quotations below are about correct but subject to strike conditions. We quote nominally :

Anthracite in cars at bridges, egg, stove and nut, $5.50 ; grate, $5.25 ; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines : Lump, $1.50 ; 3-4 inch, $1.40 ; run of mine, $1.30 ; nut, $1.25 ; N. P. and S., $1 ; slack, 75c. ; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges : 1¼ inch, $2.60 ; ¾ inch, $2.50 ; mine run, $2.40 ; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, May 9, 1906.

PIG IRON—Cleveland warrants are quoted at 50s. 0½d, and Glasgow standard warrants at 50s., making prices as compared with last week 1s. 9½d higher for Cleveland warrants and 2d higher for standard warrants.

TIN—Spot tin opened strong at £197 10s., futures at £188 17s. 6d, and after sales of 120 tons of spot and 310 tons of futures closed steady at £197 5s. for spot, £188 12s. 7d for futures, making price compared with last week £13 higher on spot, and £10, 7s. 7d higher on futures.

COPPER—Spot copper opened firm at £83 7s. 6d, futures £82 7s. 6d, and after sales of 200 tons of spot and 400 tons of futures, closed firm at £83 15s. for spot, and £82 17s. 6d for futures, making price as compared with last week 5s. higher on spot and 17s. 6d higher on futures.

SPELTER—The market closed at £26 7s. 6d, making price as compared with last week 5s. lower.

LEAD — The market closed at £16 10s., making price as compared with last week 10s. higher.

U.S. IRON AND STEEL MARKETS.

From the Iron Age, May 10, 1906.

April production of anthracite and coke iron was not as heavy as it was in March. It amounted to 2,073,645 gross tons, of which the steel companies made 1,333,591 tons. This compares with 2,165,632 tons and 1,400,395 tons, respectively, in March. The furnaces are running along at the rate of 484,000 tons a week.

The output of the anthracite furnaces was somewhat interfered with, but, as we have fully explained, hard coal plays so unimportant a part in the iron industry that the stoppage of the mines is only slightly felt. The resumption of work at the Anthracite collieries will not appreciably affect the supply of iron and will have as little effect in causing a weakening in prices as did the cessation of work tend to strengthen values.

The markets for foundry pig iron as a whole are rather quiet, with an easier tendency in some localities.

In steel making irons there has been further activity. In the east one works in the Philadelphia district purchased 10,000 tons at $17.50, delivered.

The cast iron pipe foundries continue exceedingly busy.

Pacific Coast orders for structural material have been very light.

Further rail orders for 1907 delivery are looming up. The Pennsylvania inquiry is for 180,000 tons, and two western roads are in the Chicago market for an aggregate of 70,000 tons.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, May 10, 1906.

Strikes continue to be the most important factor in the iron trade. Following the settlement of the strike of anthracite miners and the weakening of the position of the idle longshoremen, the action of the molders in many cities in quitting work looms into prominence. The anthracite strike has not been important in its relation to the iron trade, about the only effect being the banking of a few furnaces and the strengthening of coke prices. The strike of the longshoremen seems to be very near the collapsing point. They have made a most humiliating failure in attempting to get the mates to leave their boats, and it is evident that the president of the longshoremen's union was deceived as to the strength of the mates' union. The strike of foundry employes extends over a large part of the country, and may have important effect on the market, as the disposition of a large majority of the employers seems to be to close their plants until they can resume under strictly open shop conditions.

A number of important contracts for new industrial plants have been awarded, including the steel for four new blast furnaces for the steel corporation at Gary, Ind., and 5,000 tons for the open hearth plant of the Bethlehem Steel Co. Bids for the construction of the Manhattan bridge have been opened and three of the estimates are nearly $1,000,000 less than those of last year.

Important inquiries for steel cars, including 20,000 from the Pennsylvania Railroad, with numerous small orders, indicate a strong market for plates and other material needed for the construction.

The demand for wire products is exceedingly heavy, especially for nails for use in putting up temporary structures in San Francisco, for which purpose 50,000 kegs have been shipped by the American Steel & Wire Co. The business of that company during April exceeded that of any month in its history.

THE METAL SITUATION.

Report issued by C. S Trench & Co., New York, on May 4.

Among the recent economic changes and phenomena of the past two years has been the increased demand for iron, steel and metals, caused by the developments that have taken place in our present civilization in the line of the use of these materials.

The consumption of the country in iron, steel and metals is breaking all records, and the lead that the United States (as a result of our prosperity, which has given the opportunity for our energetic, progressive spirit to find vent) is certain to, and already is, being followed by older and more conservative countries.

The movement is a genuine one, based on actual economic requirements. There has been absolutely no speculation, with the possible exception of tin, but the largest and best consuming business that the country has ever seen is being done at the highest prices in recent years, and in some cases the highest prices on record.

The outlook continues a brilliant one, and nothing but some dire calamity in the shape of a crop failure or unforeseen war, or other trouble, it would seem, can prevent a continuance of present conditions.

In copper, tin and antimony, consumption is exceeding production. Lead shows signs of being in a like condition. Iron and steel are only able to keep pace with the demands being made. During the past few days in tin, lead and antimony an increased demand has been suddenly developed, probably occasioned by the necessity to replace the California damage and loss. There are no stocks to draw from.

Dealers and consumers for over a year have considered prices dangerously high, and have been carrying no stocks. The demands have been sufficiently large to take the production, and in some cases exceed it. The constant advances the manufacturers have been compelled to make in their goods, finds the demand for them greater than ever, and manufacturers are reluctantly obliged to secure the raw material at the best prices they can, and in several instances this is only accomplished with great difficulty, as in the case of tin, copper, antimony and lead.

Copper, with virtually no stocks anywhere, with production sold up for the next three months, would to-day be at 20 cents, but for the strong control being exerted by the five or six producing interests to keep prices from going higher, and preventing a run-away market. This they are accomplishing by refusing to sell anyone but actual consumers.

Tin now at the highest price on record, with the consumption of the world running for the past year over 150 tons per month greater than the production unless some change in production or consumption takes place, may go higher still.

Antimony, from 8½ cents per pound 12 months ago, is up to 24½ to 25c. now and 30 cents per pound looks now more reasonable than 20 cents did two months ago.

Lead.—In spite of the two advances made in past few days by the trust, is scarce to-day, difficult to get, and we know of orders sent to England within 24 hours on account of supplies not being obtainable here in sufficient amounts.

Spelter has up to the present lagged behind in the remarkable movement being experienced in other metals, but shows signs now of sharing in the good times. We advise watching this article, and believe the purchasing that has been a feature during the past two days foreshadows an active market with higher prices.

Nova Scotia Trade News.

Halifax, N.S., May 9.

After the brisk business of the past two months, trade is now slacking off a little, though the demand for seasonable goods keeps up fairly well. Haying and gardening tools are the principal articles now moving, they being quoted at 60 per cent. off the list. Metals are steady and sales of rope are about over for the present. Nails are going out in small quantities at $2.25 for wire and $2.40 for cut. These prices are base. Tarred sheathing is in good demand, and also plain and barbed wire. Trade is fairly good for builders' supplies, and gives promise of greater development. Orders from the gold mining sections are not quite up to expectations. The development of the properties, especially those at Seal Harbor, is not so extensive as at first proposed.

* * *

In Cape Breton there is plenty of work in the mines and mills. The contract secured by the steel company for the supplying of 6,000 tons of rails for Vancouver is well received. These rails will be taken around the Horn by the steamer Boveric. As the company will not be ready to ship their cargo of rails before a month, the steamer, which is now at Sydney, will in the meantime be placed in the coal trade.

* * *

The various collieries of the Dominion Coal Company produced approximately during the month of April 296,000 tons.

* * *

The approximate output of the Dominion Tar & Chemical Co. for the month of April was 2,000 tons of the various coal tar products.

* * *

The water and sewerage committee of the Dartmouth Town Council has recommended the acceptance of the tender of the Standard Drain Pipe Company, of New Glasgow, N.S. The firm's tender was as follows: 9 inch sewer pipe, 48 cents per yard; 18 inch sewer pipe, $1.59 per yard; 9x6 junction, 75 cents per yard. Messrs. Max Ungar and John Doyle, of this city, have each furnished $2,500 security for the carrying out of the contract by the New Glasgow firm.

* * *

Fifty cars of three tons capacity have arrived at North Sydney from the Rhodes-Curry Co.'s car works, Amherst, for the Victoria Gypsum Company at Munroe's Point, Victoria. The company is planning extensive operations for this season and expects to ship 10,000 tons of gypsum before the close of navigation. The cars will be taken to Munroe's Point on scows.

The Maritime Gypsum Company has received at its quarries, Amherst Point, a new locomotive for use at its works, and expects to be shipping plaster and rock from its wharf this week.

* * *

J. T. H. Wise, the electrical expert who has been brought by the Maritime Coal & Railway Company to investigate the projected power scheme for Amherst, has arrived at that town. In company with David Mitchell and W. L. Russell, manager of Allis-Chalmers-Bullock, Limited, they visited the various points between Waccam and Moncton. In an interview Mr. Wise declared he knew of no parallel undertaking in Canada, but declared that the scheme would have the same benefits as in many cases where power has been generated from waterfalls and transmitted a long distance. The intention of the company is to light and supply the town of Amherst with power. Continuing, Mr. Wise said that where this had been done industrial towns had doubled their population in nearly every instance. He cited the case of Hamilton, Ont., which as a result of a power scheme had increased its population from 30,000 to 60,000. He expressed the opinion that Amherst would experience a boom as the result of the consummation of Mr. Mitchell's scheme.

Hardware and Metal Conditions in Manitoba.

Market quotations corrected by telegraph up to 12 a.m. Friday, May 11, 1906.)
Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

FLUCTUATIONS—
Solder—Advanced 1c. per lb.
Linseed oil—Reduced 2c. per gal.
Clevises—Advanced ½c. per lb.

Notable changes this week are few and unimportant. There is a large volume of business being transacted in a steady market, prices holding firm on all staple lines.

SCREEN WIRE CLOTH — Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Prices are steady. We quote: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ½, $7.20; ⅝, $4.60; ¾, $4.30; ⅞, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts are now 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS — The discounts from list prices are 45 and 5 p.c.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—As noted last week, the price has been advanced $3 per dozen. We quote: Royal Canadian, $33; R.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—The price has advanced to 25c. per lb. Block tin is quoted now at 45c. per lb.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Elev's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The price is steady at the recent advance to $5.00 per cwt. for small lots, with a reduction of 25c. per cwt. on ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10⅜ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote: Silver Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gasoline, 70-72 (engine), 25½c.; in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE Linseed oil has been reduced 2c. per gal-

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

New Brunswick Trade News

St. John, May 7.

Fairly brisk trade with prices remaining firm, about sums up the state of affairs in the local hardware world. There has been nothing of especial interest marking the past week or so in trade circles, but so long as business continues good dealers will not find fault with an uneventful season.

* * *

The manufacturers of builders' materials have lately given their price list a revision. The result is not at all

Glaziers' Sundries!

Send us your orders when in a hurry and mark **"RUSH"!** for any of the following :

Putty in bladders
Putty in bulk

G. F. STEPHENS & CO.

LIMITED

PAINT AND COLOR MAKERS

WINNIPEG and CALGARY

startling. Prices of tarred and dry sheathing have been lowered five cents per roll, but other figures are practically unchanged. Three-ply roofing is now offered at about $1.20 per roll; two-ply roofing sells at about 25c. less per roll; tarred felt may be purchased at $2 per hundred, and tarred sheathing goes at 45c.; dry sheathing is offered at 35c. It will be seen from the foregoing that the prices now prevailing do not differ materially from those of six or seven months ago. In St. John, though, building operations are not especially heavy. Of Summer cottage building, however, there is quite a bit.

* * *

Linseed oil is again showing quite a pronounced upward tendency. Prices are temporarily very firm and higher quotations are anticipated in the near future. Strong demand and a shortage in the crops are given as the principal reasons for the state of the prices. The raw oil sells at figures around 60c.; the boiled at 3c. or 4c. higher.

* * *

The tin figures are becoming a little short of alarming. If the supply of tin has been cornered the effect of the move is being felt in real good style. We are told that record prices are being asked, or have been asked, across the water, and dealers are beginning to fear record prices here, which will prove disastrous. The market of 1905, strong though it was, could not compare with that of the present year. Importers of ingot tin are now paying 6c. and 7c. more than they paid six weeks ago, and tin plate figures are also tending skyward again.

* * *

Brass rivets and machine-made screws are stronger in price than they were a short time ago. Nails are not turning one way or another. Wire nails continue 15c. or so below the price of cut nails. The demand all round is satisfactory. Horseshoe nail prices are firm.

* * *

The city council has decided to instal regulating valves in connection with the new water system. Part of the water system is temporarily to be taken from under the control of Director Murdoch, while the valves are being placed. This move has caused considerable comment in the city.

* * *

W. H. Thorne has recently returned from a southern trip. Report had it that he intended to invest in some Mexican and Cuban projects, but Mr. Thorne has said his trip was one of pleasure only.

SITUATIONS VACANT

HARDWARE CLERK—With knowledge of stoves; good salesman; state age, experience and salary. Send references. Estate A. Thompson, Bradford, Ont.

MR. QUINN'S NEW POSITION.

The announcement that Mr. M. J. Quinn had resigned his position as mechanical superintendent for the Ontario Government and intended accepting a position with one of the most enterprising heating supply houses in Canada, was read with great interest by the trade who have become quite familiar with Mr. Quinn through his able articles on plumbing, heating and ventilation in Hardware and Metal during the past year.

Mr. Quinn, as will be seen from the reproduction of his photo, is still a young man, being only thirty-two years of age, but for twenty years he has been a valued employe of the provincial Government, starting work two decades ago as assistant plumber, and working for eight years with the tools on all branches of plumbing and heating work. He was then appointed sanitary inspector for the province, and later on became mechanical superintendent in addition to his duties as sanitary inspector.

M. J. Quinn, Toronto,
Who has resigned his position as Mechanical Superintendent of Province of Ontario.

In this latter capacity he had charge of all the heating, ventilating and plumbing work in the asylums, prisons and schools in Ontario, as well as the jails and lockups in the unorganized districts, all work done in these institutions being practically under his supervision. He has also been called upon at various times by the Provincial Board of Health to give the medical men the benefit of his practical knowledge, and as a result of his work on behalf of better sanitation, he has become recognized by the medical fraternity throughout the province as an authority on all sanitary questions.

In voluntarily resigning from the public service, Mr. Quinn has taken a rather uncommon step, most men being desirous of securing a comfortable berth for life in the pay of the elected representatives of the people. Hon. Mr. Reaume, Minister of Public Works, has written Mr. Quinn a letter regretting his decision to resign, and highly commending him for his faithful services to the Public Works Department, and ex-Premier Geo. W. Ross, on learning of Mr. Quinn's resignation, also wrote regretting the step and stated that during all of the twenty years' of service for the province Mr. Quinn had never been reported for any irregularity.

Mr. Quinn's new position is with R. J. Cluff & Co., who have secured all Canadian rights in connection with the Thomas Acme air purifying and cooling system, which is well known as one of the most simple and successful air washing appliances in use in any part of the world, the patentees guaranteeing to put air into any building with 98½ per cent. of the impurities removed after making due allowance for lack of proper care of the plant by employes. Mr. Quinn will look after the installation of this system in all classes of buildings throughout Canada, and will in addition give the Cluff Company the benefit of his wide experience in the installation of heating and ventilating systems for all buildings.

PLUMBER WON'T PAY FINE.

There have been some lively times this week in Toronto owing to an endeavor made to force J. J. Power, Spadina avenue, to pay the fine imposed upon him in connection with the recent plumbers' trials. Mr. Power has been interviewed by the bailiff and police officers, and, it is said, was even taken to the jail door, but the authorities hesitate to imprison him for the debt. It is reported that the chancellor will decline to order his committal, and if Mr. Power escapes paying the fine there will be some sore heads amongst those who have cashed up.

WHY MEN FAIL.

Everyone knows men whose failure to rise in the world is plainly due to their inability to take the other man's point of view. I have in mind a salesman in a great mercantile establishment who is a genuine hustler, a persistent worker. He has a high forehead, a strong nose and chin; his general appearance is agreeable. What is the matter with him? Why can one so surely predict that he will never rise to the lucrative positions in his business he might legitimately aim at? Because he is always complaining of the exactions of his superiors, the long hours, insufficient pay, the use of the time clock, the necessity of caring for his stock, and a hundred other things that prove how far he is from comprehending or trying to comprehend his employer's point of view. He never in all his 30 years has caught even a glimpse of himself from anybody's point of view but his own.

How can you gain another man's point of view? First, by posting yourself on his business; then by the use of whatever reason and imagination you possess trying to think his thoughts after him. Every ambitious worker, then, should post himself on his employer's business. Let your curiosity and your observation eat it up bit by bit. Ask questions of everyone whenever you can do so without becoming offensive. Let no process that comes to our notice as a subordinate escape your complete understanding. Never be satisfied with

simply obeying orders; obey certainly, but as quickly as possible learn the full significance of the order you have obeyed. If your employer insists on a certain routine that you as a subordinate find inconvenient, comply with it, not only because that is your simple duty, but because as an ambitious man you should put yourself in his place.

THE MAN WHO CHEATS HIS WORK

An employer of thousands of men was asked what thing in all his large operations gave him the most concern. "The man who does a little less than is expected of him," is the reply. "He is the dangerous factor in all business. The absolute failure we readily discover and discharge, but the 'almost' escape detection for months and often for years, and they make our losses as well as our fears," and with a very serious smile he added, "The drip in business is worse than the leak."

Thousands of men fancy they are fulfilling their duty to their employers and to their tasks by keeping hours and performing just enough to hold on to their positions. They have an idea that to do more would be to give larger service than their compensation required. They object to what they believe would be extra values. "The old man shan't get more than he's paying for" is the vernacular.

Possibly it never strikes these trimmers that in cheating their work they are doing double damage; they are injuring their employers much, they are robbing themselves more; they are, in fact, losing everything in life that is worth while. They fare worse than if they did nothing at all, for time with all its precious values slips entirely from them and leaves no substance or satisfaction. Half doing soon brings undoing. It is the nine-tenths doing or the ninety-nine and one-hundredths doing that bleeds business and saps character.

EVOLUTION OF FISH HOOKS.

Practically the only advance in fish hooks of bronze fashioned very similar inventions is in the better material used. Fishermen along the lakes of Switzerland in prehistoric days used hooks of bronze fashioned very similar to the steel hooks used in this day. Fish hooks fashioned from the tusks of wild boars were also used by the fishermen who plied their vocation along the Swiss lakes. Bronze hooks, almost identical in style to those used now, were used by the ancients who angled in Lake Morat, and clipped flint hooks of ancient manufacture have been found in Sweden. The aborigines of Wisconsin used native copper in the manufacture of fish hooks, and many of these implements have been found in the mounds along the lakes in that state. The ancients used much larger hooks, however, than those employed by modern anglers, which would indicate that they fished for larger game than the fishermen of this age. The addition of the barb on the sharp end of the hook is a comparatively modern invention.

FOUNDRY AND METAL INDUSTRIES

An iron foundry will be built at Red Deer, Alta.

The Standard Bolt & Screw Co., Toronto, will build a factory.

The Dominion Iron & Steel Co. shipped during April 15,500 tons of steel.

The Montreal Rolling Mills Co. have taken out a permit for a building to cost $60,000.

Some large quantities of mica are being taken from Edward Smith's mine at Burgess, Ont.

The Canadian Mining & Smelting Co. contemplate establishing a concentrator in Vancouver.

The Hamilton Steel & Iron Co. will open their new spike mill at their smelting works in a few days.

Hillis & Sons, stove manufacturers, of Halifax, have sold out their Sydney stores to Mrs. M. D. Scott, of Sydney.

The Jenckes Machine Co., Sherbrooke, Que., have built a 250-horse-power hoist for the Granby smelter at Phoenix, B.C.

The Minister of Mines for Ontario announces that a free site will be given any one building a smelter in New Ontario.

The Hensall, Ont., foundry has been sold to Hunt & Boyd, London, who will manufacture radiators and plumbing supplies.

The Dominion Iron & Steel Co. have concluded a contract with the Pacific Construction Co. for 4,000 tons of steel rails.

The Bridge and Structural Iron Workers' Union have signed an agreement to work for 30 cents an hour with the usual overtime rates.

Chappel Bros. & Co., Sydney, N.S., are installing a four-and-a-half-ton molding machine, made by J. Ballantine & Co., of Preston, Ont.

The Canadian General Electric Co. ask the city of Peterborough for a fixed assessment of $150,000 on condition they expend $300,000 more on their plant.

The additions to be made to the Cockshutt Plow Works at Brantford, will consist of a 70 foot extension to the storage building, and a like sized addition to the molding shop.

The molders of Hamilton have settled their troubles with the employers. Their scale of wages will remain the same. The employers wanted to make a cut, while the men wanted an increase.

A New York firm has made a contract with Mr. Farnham, of the Hastings county iron mines, for a large supply of ore. A railway will be at once built to the mines from L'Amable station, five miles distant.

The Dominion Copper Co., of Phoenix, B.C., will install a 30-drill compressor and a hoist of 150 horse-power. With these and other new machines they purpose installing they will be able to treat 1,200 tons daily.

Work has been commenced on the Model City on Lake Michigan where the Indiana Steel Co. proposes to build the largest steel mills in the world at a cost of $10,500,000. The new city is to be built to accommodate the toilers at the mills.

In addition to the plant the Hamilton Steel & Iron Co. have installed for the manufacture of railway spikes, they will also shortly put up a plant for the manufacture of pipes and tubing. Their new blast furnace will have a capacity of 400 tons, but its particular location has not yet been decided upon.

The output of the Granby Consolidated for the month of April shows approximately 2,000,000 pounds. Late in the Summer additions and improvements will probably have been completed, enabling an increase in the yearly production of copper to 33,000,000 pounds. Within two years or so a further increase to at least 50,000,000 pounds per annum is expected.

PROPOSED STOVE WORKS FOR MORRISBURG.

The establishment of a stove factory is now talked of at Morrisburg, Ont., and there is no doubt if such an undertaking were carried on by a good strong company it would have more chance of success than the one-time all-important tin plate and sheet metal industry that was to make Morrisburg the Birmingham of Canada.

In the Morrisburg Leader a short time ago an appeal was made to men who had money to invest in that town, to build houses to accommodate the influx of population that would result upon the completion of the tin plate works. Two columns were also devoted to the tin plate industry itself in an effort to make it appear that it was a live issue; but it was pointed out by different correspondents to the Herald that the tin plate company made promises over a year ago to build some two or three hundred houses as soon as the by-law was passed, and that these promises have not yet been fulfilled.

No doubt the citizens of Morrisburg can size up the situation pretty well for themselves and will not need to be exhorted to invest their money in real estate when the time comes to warrant them doing so. If a large stove works is established in Morrisburg it is altogether likely that accommodation for workmen will be found, but until that time it can not be expected that people will invest money in building houses to accommodate visionary workmen.

LONGSHOREMEN'S STRIKE.

Business houses in Western Canada have been severely handicapped by the strike of longshoremen on the upper lakes during the past couple of weeks.

It is just at this time of the year that shipments are particularly heavy, and goods for Manitoba and the west are invariably routed lake and rail. The complete tie-up of lake traffic will mean that dealers in that part of the country will be two weeks late in receiving their shipments. Moreover, although the men have now gone back on the basis of last season's wages, there will be increased charge for freight transportation for some time at least.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Metal Shingles.

Catalogue No. 15 of the Metal Shingle & Siding Co., Preston, is designed with a view to show the variety of work that is done with sheet metal. Dealers should have this catalogue as there are many useful articles in it.

Brass Goods.

The Eagle Brass Works, Detroit, are sending out their illustrated catalogue "C," of plumbers' brass goods. It shows some good articles and should be in the hands of those who are in the plumbing trade.

Cook Stoves and Ranges.

Merrick, Anderson & Co., of Winnipeg, illustrate some fine cook stoves and ranges in their catalogue and those who have not yet received a copy can do so by dropping a line. Their three lines, known as the Jewel, Treasure and Monarch, have proven good sellers.

Self-Measuring Oil Tanks.

Catalogue "V," from S. F. Bowser & Co., 530 Front street west, Toronto, tells of the saving effected by the use of their self-measuring oil tanks. These tanks are a great time and oil saving device that should be of interest to all hardwaremen and others who sell oils. A card will bring this catalogue.

Haying Tools.

This is the time to prepare for the season when haying tools and accessories will be required. The Hobbs Hardware Co., of London and Toronto, illustrate a complete line of these goods, including hay forks, pulleys, tracks, etc., and will be glad to supply dealers with a copy.

Sash Locks.

A sash lock that locks the window either open or closed, and withal prevents any rattling, is a thing that all builders and householders can appreciate. They retail at a low price and those who are not conversant with them may have a sample upon application to the Safety Window & Lock Ventilator Co., of 17-21 Quincy street, Chicago.

Pike's Sharpening Stones.

The Pike Manufacturing Co., of Pike, New Hampshire, are calling attention to the new method they have adopted of selling oilstones, sharpening stones and razor hones. Instead of selling by the pound as is usually the way, these stones are sold by the dozen, so that in price marking there will be no necessity of weighing the stone to find its cost.

They have got out a new list of stones which covers all the items sold in their special assortment, the advantage of which is that the dealer can purchase stock for refilling their selling assortments, or purchase regular stock by the dozen. This way of handling stones ought to appeal to the trade as it is a decided improvement on existing ways. As Pike, N.H., is in the centre of the maple sugar land, the manufacturers are taking the novel way of introducing their stones by presenting their customers with a jar of maple syrup or sugar included in the boxes of stones ordered.

——advise "Metallic" lines

Have you drummed up "Metallic" Building Materials yet to the farmers in your district ?

Many of them are going to put up some barns or other farm buildings sure, or perhaps going to re-roof some old ones or put on siding.

It ought not to require much talk, when backed by samples, to show them why sheet metal is the right stuff for roofing or siding and why the "Metallic" brand is best. He's been reading our ads. Suggest it to him and show our catalogue.

Samples—if you haven't them—sent free.

Profits on our line are large—no stock to carry—catalogue makes the sale

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

"Hayes" Metallic Lathing.
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description. 418

New Wheel Nut.

The Adjustable Axle Nut Co., of London, Ont., are putting on the market a nut for vehicle wheels which does away with the necessity of leather washers. It screws up tight against the shoulder of the box like any other nut, but in addition has a sleeve or barrel which can be adjusted to take up any lost motion, and locked in position with a set screw. The proprietors have issued a descriptive booklet with price list, which they are sending out.

Pink's Lumbering Tools.

Thomas Pink & Co., of Pembroke, Ont., who are large manufacturers of lumbering tools of all kinds, will be glad to send their catalogue and price list to all who are interested in these tools. This firm makes an extensive range of lumbermen's supplies and their name is well known both in Canada and abroad.

Spear & Jackson Saws.

The long established firm of Spear & Jackson, of Sheffield, England, needs scarcely any introduction to Canadian hardwaremen, and their line of hand saws has always been popular. A catalogue of these saws will be furnished any dealer on dropping a line to the manufacturers.

Meat Choppers.

The Enterprise Manufacturing Co. of Pennsylvania, Philadelphia, call attention to their meat juice extractors, bone mills and food choppers in some bright literature which they are sending to the trade. If you have not yet received a catalogue, better drop a line, as they are good goods.

CATALOGUES WANTED.

Stillman Bros., Keene, Ont., are desirous of receiving catalogues from concerns advertising in Hardware and Metal.

FAILURE.

What is failure? It's only a spur
To a man who receives it right,
And it makes the spirit within him stir
To go in once more and fight.
If you never have failed, it's an even guess
You never have won a high success.

What is a miss? It's a practice-shot
Which we often must make to enter
The list of those who can hit the spot
Of the bull's-eye in the centre.
If you never have sent your bullet wide,
You never have put a mark inside.

What is a knock-down? A count of ten
Which a man may take for a rest.
It will give him a chance to come up again
And do his particular best.
If you've never been bumped in a rattling go,
You never have come to the scratch, I know!

PAINT, OIL AND BRUSH TRADES

BY-PRODUCTS OF COBALT ORES.

A $600,000 ore smelter is to be built at Cobalt which will smelt the product of the northern mines without wasting any of the minerals contained in the ores. With the process now carried on in New Jersey, where the ore is sent for treatment, to get the metal out necessitates the loss of whatever other valuable minerals are contained in the ore, one of which is arsenic. With the new process everything will be saved.

In Germany, for hundreds of years a secret process has been successfully carried on in the treatment of ore similar to that found in Ontario, and the promoters of the new smelter, in order that this process may be introduced into their new plant, have arranged for two German experts to come over from the Royal Geological Institute, of Berlin, and take charge of the work.

Cobalt, which is largely used in coloring glass a delicate hue, finds a permanent market in Germany, while arsenic is in constant demand, and is at present a scarcity in this country. Besides the value of arsenic as the chief ingredient of paris green, and its use in other paint pigments, it is used in the manufacture of plate glass, a factory for which is one of the subsidiary schemes the promoters of the new smelter have in view for the future.

PREPARED PAINTS IN HARDWARE STORES

It is evident that the use of paint appeals directly to the larger and better class of general hardware customers, says New York Hardware. The builder, the contractor, the house owner, the farmer, who depend on hardware for many important needs, find paint equally essential and even if other things were no more than equal they would find it convenient to include their paint with building materials, trimmings or household necessities. It not only becomes a convenience and expedites business for them but facilitates delivery and the ease of renewing supplies. The merchant loses no time in talking paint while selling other house material and it becomes a distinct gain to both sides. Not only this, but a paint stock complements and fills out the other hardware lines and the customer who may at first have been attracted only by the paint proposition, finds other wants appealed to in discussing this purchase, and the general business grows thereby. There are other features sufficiently evident but worthy of consideration. A prepared paint stock with its convenient packages, always sold unbroken, requires little or no additional expense for storage or help; it is quickly and economically handled and sold; properly kept, it always makes an attractive appearance on the shelves, and the depreciation, if any, on stock carried over, is so extremely slight as to be of no account.

There are at least two good paint selling seasons, Spring and Fall, when there is good opportunity to push the goods forward and insure sales by active advertising and display. This opens the way for a good paint demand during nearly six months of the year while the sale of the numerous household specialties in the way of family paint, buggy or wagon paints, enamels, stains, varnish paints, gold and silver paints, etc., has no limit of time or season and they are likely to be articles of constant and daily demand. It should not be forgotten, either, that from the standpoint of profit the prepared paint trade has strong points in its favor. On prepared house paints which command the largest single sales the margins vary from 25 to 40 per cent., depending mostly on the quality selected, the enterprise of the merchant and the interest he takes in demonstrating the excellence and economy of his goods.

In the selection of such a line the wisest judgment is essential. Don't under any circumstance handle cheap stuff or allow your name to become associated with inferior, short measure paint, sold only on the price or an ambiguous guarantee. Get the best. Get a well known, well advertised brand that has been tried and tested and proved its merits. Arrange for an exclusive agency to get full benefit from your efforts in building up a trade; then maintain your prices on a satisfactory margin and pass a sale now and then, if necessary, rather than do violence to a consistent and reasonable business policy. Such a course has never been known to fail in establishing a growing and a paying business.

There is probably no line of manufactured goods which are accompanied by more forceful and helpful selling features than the best prepared paints of the present day.

The few leading manufacturers of brands with a reputation behind them are devoting no end of ingenuity, skill and expense to place the arguments, necessities and requirements for good painting before the general consumer and vie with each other to do this in the most attractive, persistent and effective way.

Altogether we regard the prepared paint proposition of the present day as one of the most natural and profitable adjuncts to the general hardware line and we believe it merits the most serious and careful attention both from those who are now handling such goods and from all who have not yet seen their way clear to do so.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 11, 1906.

No changes in paints and oils have been reported, and conditions generally have remained the same for several weeks past. Such is the pressure in many quarters that some manufacturers have been compelled to take their travelers off the road until they can catch up with the heavy Spring bookings.

Dry colors continue to receive a fair amount of attention, but the heavy shipments are mostly in coach and car colors, white lead, liquid paints and varnishes. Oil stains and sundries are also in good request, and there has been a sharp inquiry for red lead and all lead products which are now arriving. The shipments now coming to hand will tend to relieve the shortage in tnese articles.

Canadian agents of foreign firms manufacturing castor oil have been advised that prices on that commodity have gone up. This is the result not only of the poor crop but also of the world-wide demand which has developed for seconds, most of which is being used for lubricating purposes. The first shipment of castor oil to reach this country arrived this week on the steamer Hurona.

TURPENTINE — The local market shows a very brisk demand, which keeps pace with that for all paint materials. We quote: Single barrels, 97c. per gallon; two barrels or over, 95c. per gallon; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

LINSEED OIL—We quote: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 56c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 59c. to 60c.

GROUND WHITE LEAD — We give prices as follows: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC — We quote as follows: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is firm at following prices: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—New prices have not yet been issued and meanwhile quotations can only be obtained from the manufacturers direct.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS — No shipments have yet been received on this side, but a large cargo of glass is expected within the next ten days, as one of the large liners is now loading over 2,000 tons for one of the large Montreal importing houses, at the port of Antwerp. Prices remain steady and we still quote as follows: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24; and twelfth do., $28.50.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 11, 1906.

Linseed oil still holds firm, with confirming reports of a shortage on Indian and not the usual amount Argentine seed to cover this falling off. Seed from Duluth has been crossing the ocean in large quantities for some time, but this also has been checked for the time being by the 'longshoremen's strike. Altogether the situation would seem to indicate that firm prices will obtain.

DON'T PUT YOUR FOOT IN IT!

Steer clear of unreliable paints if you want your business to grow steadily. Good quality to-day, ordinary quality to-morrow, won't do. The people demand **sure** results.

All the more reason why you should get

Ark Brand Paints

and show them in your store—**conspicuously.** Our **FLOOR PAINTS** are made to meet all the demands of wear and service. Tests have proven them to be superior to any other floor finishes. These paints are pleasing particular people. They will please your customers.

The Canada Paint Company, Limited

Toronto, Montreal and Winnipeg

Our quotations this week are a cent higher.

Turpentine continues firm at the same quotations, and the feeling is generally prevalent that prices will keep up pretty well. A few days ago one of the large shippers in the south refused a contract for 5,000 barrels for May, June, July and August delivery, fearing he could not meet it in the time specified.

White lead remains unchanged in price but with an increasing demand. There is a company formed in Toronto who are said to have in hand the building of a plant which will produce lead by an entirely new system, in a much shorter time than is ordinarily taken.

Glass is quiet just now, and considerable is said to be on hand. There are reports that some of the European manufacturers will come together with a view to restricting the output, and thereby firming up prices.

All paints and colors have been selling well during the past week, and the outlook continues exceptionally bright, outside men keeping up good bunches of orders.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92½c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 560 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7½c.; No. 1, in casks, 6c.; in 100 lbs., 6½c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12½ lbs., 8½c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN—Prices have been withdrawn owing to recent advances.

SHELLAC VARNISH — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 59c.; 5 to 9 barrels, 57c.; boiled, 1 to 4 barrels, 62c.; 5 to 9 barrels, 61c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE — Single barrel lots, 96c. to 98c. f.o.b. point of shipment, net 30 days. For less quantities than barrels, $1.03 per gallon will be charged.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11½c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11½c; finest American white, 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS — Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 8½c to 9c. per lb., and 10c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM—Prices continue unchanges. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

NEW PROCESS OF MAKING WHITE LEAD.

What promises to be a factor in the white lead trade is a patented process of manufacture controlled by George E. Kingsley, of Toronto. Mr. Kingsley has been at work on a secret process for some years and has it now to such a state of perfection that the production of a pure white lead direct from galena is a matter of only twenty-four hours.

The manufacture of white lead is ordinarily a long series of treatments beginning with smelting the ore into pig lead, and then casting or rolling it into thin sheets, after which it passes through the corroding period and is made ready for market in from seven to eleven weeks.

The new process is by precipitation, and the finished product is an amorphous hydrocarbonate of lead (white lead), which in appearance has that pure whiteness so much desired. Other features claimed for the new process are a complete saving of all by-products, and a reclaiming of the solvents used in the treatment, which make the process an economical one.

A five-ton plant was in operation in England last year and produced a white lead pronounced by scientists and practical men to be of a very high grade and fully equal to any in covering capacity. A similar plant will be in operation in a few weeks at property on the Don River, purchased from Thomas Davies by a company who have the matter in hand. Machinery and appliances for a fifty-ton plant are also now being made, which when ready will be installed in place of the small plant that will be used in the meantime.

Galena, from which lead is made, is found in large quantities in Northern Ontario, and blende, or blackjack, a zinc ore which has also been successfully treated by the same process, is found in many places in eastern Ontario and Quebec.

THE DEACON LEADS THE PROCESSION.

"I'll just bet you a dollar," shouted the woodenware traveler, breaking into the Deacon's store about ten one morning.

"I'll take you, what is it?" roared the Deacon.

"You clear out that corner," the woodenman continued, "and make a woodenware section of it and I'll bet you a dollar you'll give me an order the next time I come."

He had seen the Deacon the night before and couldn't sell him anything because he had all he wanted. That was some months ago. The woodenware section was made, and the traveller didn't win the bet, because the Deacon to make two dollars gave the order to another house, but he wanted the goods, and if you ask him he will tell you a wooden-

ware section is all right. He happened to have a clerk that knew a muss from a melon patch, and he arranged that woodenware so that every one who came in went over and had a look. Some bought things they hadn't come for, and all had a good word to say about the display.

"Jocks-a-mighty, but that woodenware show's all right," said the Deacon to the clerk one day. "Suppose we put some in the window."

The clerk knew what the Deacon's "suppose" meant, so he cleaned out one window and dressed it with woodenware. A night or two after the Deacon was "just kind o' goin' over things," as he said, and remarked to himself:

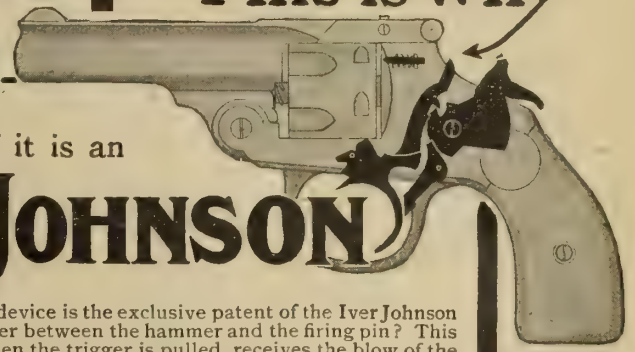
"By gum, I've got to have some more woodenware right sharp. I guess I owe Bass, Wood & Hoop's man a dollar. Lordy but I do."

He mailed the order to the traveler.

It happened to be the right time of the year, and the Deacon began to think his customers must have burnt all their old stuff the way they bought pails, tubs, brooms, stepladders and the rest. But the clerk wasn't satisfied. He says:

"Say, Deacon, why not go the whole figure with this wood stuff and advertise it some?"

The Deacon had a "standing" ad in the local papers, so they sent in a woodenware "change" and the Deacon did the woodenware business of the town till the other fellows caught on and got up behind his buckboard.



A CHANGE OF VENUE.

A new variation of about the oldest predicament in the world comes from Salem, in the distant State of Washington. A couple put up at one of the best hotels at Salem after a grand public ball. About three a.m. the husband awoke with the frantic pangs that might be expected to follow a grand public ball in Salem (Wash.). His wife, much alarmed, rushed downstairs on the jump into the dining room, seized a mustard cruet, and emptied the contents into her handkerchief. Flying upstairs, she entered the first door she came to. A man was lying on the bed, and with feminine deftness she applied the poultice just where it would do the most good. The man let out a howl, and yelled, "Woman, what in —— are you doing?" There was a shriek, a patter of bare feet on the hall floor, and, frightened half to death, the poor wife found her room and suffering husband. She told him her troubles, and it tickled him so much that his pangs took an instant change of venue.

The little things count. Nail clippers and files, traps, chains for key rings, etc. A side table with small articles in view is the idea.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Price: Hammer, $5.00; Hammerless, $6.00

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The town of Indian Head is installing a waterworks system.

The Brantford Screw Works will probably remain in that city.

Edmonton is having plans prepared for a $115,000 waterworks plant.

Cline's furniture factory at Stratford was damaged by fire to the extent of $3,000.

The Felt Roofing Co., Brantford, expect to have their factory running in a week or two.

The Queen City Plate Glass & Mirror Co., Toronto, suffered considerable loss through fire.

While boring a sewer test at Fort Frances, Ont., a small flow of natural gas was struck.

Kingston will ask the ratepayers to vote $85,000 for extensions to the water and light plant.

The works of the Sand Lime Brick Company in Brantford will be in operation by July 1.

The King Milling Co. will build and operate a planing and lumber mill at Cranbrook, B.C.

Shurly & Dietrich, of Galt, will enlarge their plant by the addition of a warehouse 130 by 50 feet.

It is understood that the International Electric Co., of London, will absorb the Electrical Construction Co.

The Canadian Rubber Co., Montreal, will increase its capital to two millions, and will extend their plant.

W. H. Clark, Edmonton, is at the head of a company who are building a planing and saw mill near that city.

R. L. Frost has commenced operations in connection with installing the Brooke lighting system in Owen Sound.

The basket-making plant of Geo. H. Williams, Thorold, Ont., is offered for sale by G. B. Burson, St. Catharines.

The Bowser Manufacturing Co. will build a factory at Riverdale, Toronto, for the manufacture of gasoline tanks.

Winnipeg capitalists are applying for a charter to incorporate the Colonial Bank of Canada with a capital of $3,000,000.

The business men of Fort Frances, Ont., have organized a business association with a view to developing the town.

W. W. Scott's furniture factory at St. Louis de Mile End, Montreal, was destroyed by fire. The loss is about $20,000.

The Canadian Westinghouse Co., Hamilton, will spend $200,000 increasing their plant and will employ 500 more men.

Geo. Stevens, of Peterboro, has started a lye factory at that place. About ten hands will be employed at the commencement.

A manufacturing company is negotiating with Port Hope with a view to establishing a business at the radiator buildings there.

The Montreal Light, Heat & Power Co., of Montreal, will erect a power house at Soulanges, Que., which will cost a million dollars.

The Henderson Roller Bearing Co. will be reorganized under the name of the Dominion Henderson Bearings, and will carry on the business.

The Dickson Lumber Co., of Peterboro, have conveyed their interests, consisting of mills and timber limits, to a syndicate composed of men from Toronto, Orillia and Boston, for the sum of $600,000. W. D. Loomis, of Toronto, is president of the new company. The Dickson Co. retain their Peterboro and Lakefield mills.

A few weeks ago notice was given of the resumption of business at the plant of the old-established Laurie Engine Company, under the name of the Laurie Engine & Machine Company. In visiting the plant recently, Hardware and Metal learned that the works are now again working at almost their full capacity. The introduction of new capital and energy has brought this firm once more to the front. Additional workmen are being constantly taken on, and orders already on hand will keep the new firm busily engaged for some time. Moreover, numerous inquiries are being received, all of which indicate the popularity of the Laurie lines. Although all the engines, boilers, etc., formerly manufactured by the Laurie Engine Company are being produced by their successors, special attention is being paid to the well known Laurie Corliss engines, in simple, compound, horizontal and vertical; Rival engines, mining machinery, and various types of power transmitting machinery. The officers of the company as reconstructed are: President, Wm. Yuile; vice-president, David Yuile; managing director, Herbert Yuile; secretary-treasurer, A. E. Madley; superintendent, Alex. Ross; directors, C. E. L. Porteous, C. W. Davis, Wm. Yuile, David Yuile, Herbert Yuile.

Companies Incorporated.

An order-in-council has been passed by the Lieutenant-Governor changing the name of the Dominion Harness Co. to the Dominion Pressed Steel Co.

The Rapid Tool Co. has been incorporated under Ontario charter with a share capital of $40,000 to manufacture and deal in tools and hardware. The provisional directors are Wm. Rudkins, Wm. Quinn, and G. L. Hay, with head office at Peterborough.

G. Duthie & Sons have been incorporated under Ontario charter with a share capital of $40,000, to carry on the business of roofers and sheet metal workers. The provisional directors are: George Duthie, John B. Duthie, R. R. Duthie, G. F. Duthie and Margaret Duthie, with head office at Toronto.

The Roofers' Supply Co. has been incorporated under Ontario charter with a shape capital of $200,000 for the purpose of manufacturing and dealing in roofers' supplies and structural material. The

provisional directors are Andrew Dods, R. B. Rennie, Geo. Duthie, Asa Matthews, Thomas Douglas, Howard Williams and Harry Hutson, with head office at Toronto.

BUILDING NOTES

Geo. Paull, Swan River, will build a large store.

J. Janzen, Rosthern, Sask., will build a $10,000 block.

Calgary permits this year have reached a half million.

The Curling Club, of Walkerton, Ont., will build a rink.

St. Ann's congregation, Toronto, will erect a $35,000 church.

A Roman Catholic church will be built at Eglinton, Ont.

The Norton Mfg. Co., Hamilton, will build a $5,000 addition.

W. W. Black, of Fort William, will erect a hotel at Westford.

J. R. Mears, Arcola, Sask., will build a business block 130 x 26 feet.

The Bank of Montreal will erect a building at Lake Megantic, Que.

Beattie & Co., Swan River, Man., will build a brick office building.

The Y.M.C.A., of Montreal, have purchased a site for a new building.

J. R. Booth will build an addition to his paper mill at Chaudiere Falls.

Winnipeg building permits for 1906 have passed the three million mark.

Mark Fisher, Sons & Co., Montreal, will erect a ten-storey business block.

J. Y. Griffin, of Winnipeg, will build a cold storage plant at Fort William.

T. A. Fee will build a $22,000 business and apartment block in Vancouver.

The Imperial Oil Co. will erect a distributing warehouse at Boissevain, Man.

The William Grace Co., Winnipeg, has the contract for the new nurses' home.

Allward & McCormack Stained Glass Co., Winnipeg, will erect an office building.

The Natural History Society, of Montreal, will erect a museum this year.

Coppley, Noyes & Randall, clothiers, Hamilton, will erect a $25,000 warehouse.

The Sacred Heart congregation of Sydney, C.B., will build a $5,000 school.

Since the fire at Fort Frances, Ont., the amount of buildings started is $230,000.

Port Arthur has already a half million worth of buildings contracted for this year.

G. E. Mills, of Hamilton, has taken out a permit for a new Star theatre, to cost $35,000.

St. Peter's Roman Catholic Church, Toronto, will build a $27,000 edifice on Bloor street.

Queen's Avenue Methodists, New Westminster, will spend $2,500 on a new addition.

Geo. H. Gooderham has purchased five acres in Toronto, upon which he will erect a residence.

The Canadian Bank of Commerce asks for tenders for buildings at Langham and Radisson, Sask.

Galt manufacturers contemplate forming a joint stock company to build workingmen's homes.

Rutledge & Jackson have let a contract for a $3,500 addition to their block in Fort William.

The Eastern Townships Bank will erect a 10-storey bank building in Montreal, to cost $500,000.

B. J. Crawford, Goderich, is erecting a business block. The Sterling Bank will occupy part of it.

The Empire Elevator Co. has let the contract for a 3,000,000 bushel elevator to Barnett & McQueen, to be built at Port Arthur.

British Columbia lumber will go to San Francisco free of duty. It is thought that lumber will go up owing to this increased demand.

Toronto building permits up to 30th April this year show $1,250,000 increase over the corresponding period last year. April permits amounted to $1,424,000.

ARM REST FOR RIFLEMEN.

A recent invention provides a support for riflemen to insure steadier aim and greater accuracy. The supporter is strapped to the person and comes automatically into position when the arm is raised. At the same time it allows perfect freedom of movement laterally. As pictured in the accompanying engraving, the device comprises a post journaled at its lower end in bearings attached to a strap which is fastened around the waist of the user. The upper end of the post, which comes well up to the armpit, is forked to receive the heel of a bar pivoted therein. The outer end of the bar carries a curved plate and forms a rest for the rifleman's arm to which it is strapped. When the rifleman raises his arm the bar is swung upward with it and then held in extended position by a spring-pressed pawl pivoted to the post and engaging a notch in the heel of the bar. In one face of the heel a depression is formed to receive a fly, loosely pivoted therein. The outer end of the fly is tapered to a point which extends slightly beyond the periphery of the heel. To return the support to folded position it is merely necessary to raise the arm a little further until the pawl passes out of the notch and over the end of the fly, so that on lowering the arm, the pawl will first push the fly forward and then ride on its tapered edge over the notch, permitting the bar to swing down. As the post is mounted to turn in bearings upon the waist strap, it is evident that the rifleman may freely swing his arm laterally, whether the support be extended or folded. The arm rest may be adjusted to any desired angle by changing the position of the notch in the heel. At an angle of 90 degrees it would make an excellent support for pistol shooting. Mr. William S. Dunham, of Sharpsville, Pa., has secured a patent on this novel arm rest.

Arm Rest for Riflemen.

These are the Painter's busy days. Are you prepared to take care of his demands? The S-W. Line has a Paint or Varnish for every requirement.

The painter is a busy man at this time of the year. It's his Spring harvest season. Every job is a rush one—he must do his work quickly and efficiently—and he wants his paint and varnish demands filled promptly and satisfactorily. The dealer who can give the best goods and service gets the business.

The Sherwin-Williams Agent has every advantage. ***The S-W. Products*** have no equal for all painting and varnishing purposes. They are recognized everywhere as the standard for excellence. The S-W. reputation for always giving quality and honest value is behind them.

Our agents can give their trade the best service, too, for we can make quick shipments on all our goods, and we give them every aid to go after the business and secure it.

If you're not one of those fortunate ones who handle ***The S-W. Products,*** we have a paint proposition for you. Write us today.

TAYLOR-FORBES IN MONTREAL.

A number of changes have recently been made in the arrangements of the Taylor-Forbes Company's sales office in Montreal. Until a little over a month ago their branch in the eastern metropolis was situated on De Bresoles street, but finding their quarters becoming cramped and unsuited for the display of their many new lines, they decided to establish themselves elsewhere. About the same time Mr. Moulden, who had successfully managed that end of the business, was promoted to the headquarters in Guelph.

Arrangements were finally completed by which H. McLaren & Co. became Montreal agents for the Taylor-Forbes Company, and commodious sample rooms were prepared at 122 Craig street west. Here are displayed, in a bright and cheery wareroom, samples of all the popular Taylor-Forbes lines. Particular attention is paid to their "Sovereign" radiators, lawn mowers and builders' hardware.

H. McLaren & Co. are no strangers to the trade, having been for years the Montreal selling agents for the Dominion Radiator Company. They are now snugly ensconced in their new office, and are busy shaking hands with both old and new friends.

METAL SHELF BOXES

DO you know that your customers are judging your stock by the general appearance of your store? It is absolutely impossible to keep your goods neatly arranged without using some kind of shelf boxes. Our system enables you to keep all goods of one kind together; you always know when your stock is running low, and you never have to tell a customer you are just out of what they want and then find the next day you had plenty in stock. The Bennett Metal Shelf Box has been on the market for years. Some of the best hardware stores in Canada have thrown away their old wooden boxes and put in our up-to-date metal box. Cameron & Campbell, Toronto.

HE TOOK BROOMS.

Two old fellows in New Hampshire were the sharpest things in the way of bargaining. Cy Pettingill made brooms for a living and Ezra Hoskins kept a store. One day Cy came in with a load of brooms and the dickering began.

Cy was a man who could see a bargain through a six-inch plank on a dark night, and Ezra could hear a dollar bill rattle in a bag of feathers a mile off. Well, they began, and their conversation was something like this:

"Ezra, I want to sell you these brooms."

"All right, Cy, I'll take them."

Cy said: "I don't want any store bargains, I want cash for them."

They talked and gadded a while, and then Ezra said: "I'll tell you what I'll do, Cy. I'll give you half cash and half trade."

Cy took a fresh chew of tobacco, pulled a straw out of one of the brooms and said:

"That'll be all right, Ezra."

After he had put the brooms in the store, Ezra said: "Here is your money, Cy, now what do you want in trade?"

Cy looked around for a spell, cocked his eye up to the ceiling, stuck his cud in his cheek and said:

"Well, if it's all the same to you, Ezra, I'll take brooms."

The garden tools, how about them? Lawn mowers, sprinklers, hoes, rakes, shovels, etc. Nearly everyone is interested in these goods now.

[Registered in accordance with the Copyright Act]

Article XXX.

VENTILATION.

While, in view of its great importance, it would seem strange indeed to discuss the question of ventilation, as we have in preceding articles, without dealing with mechanical or forced ventilation, still, we recognize the absolute impossibility of fully dealing, in the limited space at our disposal, with so broad a subject, and one so full of detail, and will confine ourselves to a general description of the principles which underlie it.

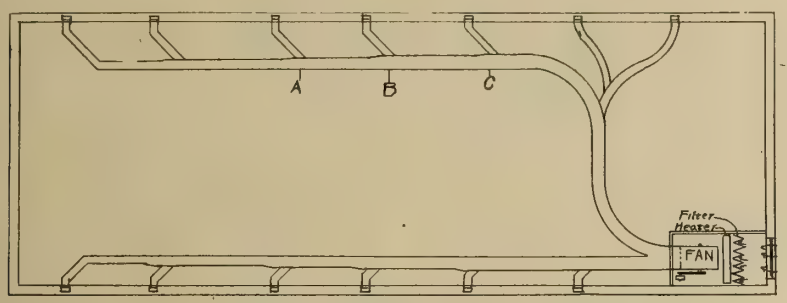

Fig 1

Forced ventilation differs from gravity ventilation, which we have already described, in that the air, instead of depending upon the variations in the weight of the atmosphere for its movement or circulation, is forced through the ducts by a fan and for that reason, when properly installed, can be depended upon to furnish a definite quantity of air, no matter what the atmospheric conditions may be.

The heating of buildings is sometimes combined with the ventilation system, that is, the fresh air being forced through the ducts to the various appartments is heated to a sufficiently high temperature to provide for the loss of heat through the exposed walls, glass, etc., and still maintain a comfortable temperature in the room, but except in the case of hospitals, where the number of inmates is continuous day and night, this is not an economical arrangement for the reason that it costs money to heat the fresh air that is being constantly blown through the building, and where, as in the case of schools, public buildings, etc., that are occupied for perhaps not more than eight out of the twenty-four hours, the heating should be done by the "direct" method, with the ventilation separate, and so arranged that it can be used only when required; in this way a saving of about 60 per cent. in the consumption of fuel will be effected during the periods when the building is not occupied and the ventilation plant is not in operation.

In Fig. 1 we have a plan of a supposed small ventilation plant, in which, for the purpose of saving head room in the basement, rectangular galvanized sheet iron pipes are used, though where it is possible, the use of circular pipes are recommended.

Connected to the galvanized iron piping system is a fan, which may be direct or belt driven by any available power, and behind the fan is the "heater" which extends from side to side of the apartment in which it is placed.

It will be noted that throughout the piping system there are no square bends or turns and that the direction in the travel of the air is changed by easy angles and curves; the reason for this is that it is necessary to reduce frictional resistance to the lowest minimum in order to obtain satisfactory results, for acute angles of any kind are fatal to a system of this kind.

It will be noted that there is a reduc-
